2.0 CWC Information

2.0.1 Flood Situation & Advisories as per Actual/ Forecasted Rainfall

Due to the continuous heavy rainfall in the basins of Upper Cauvery, Tunga & Bhadra in Krishna Basin and West flowing rivers in Karnataka, water level of the rivers in Cauvery, Krishna (Tunga & Bhadra), West flowing rivers in Karnataka, flowing through the districts of Kodagu, Chikmagaluru, Hassana, Shivamogga, Mandya, Chamarajanagar, Dakshina Kannada, Udupi and Uttara Kannada, Belgavi, Vijayapura, Bagalkote, Kalburgi, Yadigiri, Dharwad and Raichur has raised significantly from past two days and maintained constant Inflow. IMD rainfall forecast, the situation is likely to improve in the next two - three days. In the catchment area of Kabini river, IMD has forecasted a moderate rainfall and there is likely fall in water level in the Kabini river and inflow to Kabini Dam.

Based on the IMD rainfall and other synoptic condition forecast, the inflow to the Dams is likely to continue as same/constant for the next 24-36 hours due to Moderate rainfall and base flow of river in the upper catchments of the Cauvery and Krishna (Tunga and Bhadra) Basins. Inundation is likely to remain in the next 24 hrs in the flood affected districts of Kodagu, Chikmagaluru, Hassana, Shivamogga, Mandya, Chamarajanagar, Dakshina Kannada, Udupi and Uttara Kannada, Belgavi, Vijayapura, Bagalkote, Kalburgi, Yadigiri, Dharwad and Raichur. Accordingly State/Civil authorities of the above Districts may take appropriate measures for present flood situation.

The Upper Tunga reservoir on the river Tunga is at FRL and the water level at 0600 hrs is about 588.24 m, (constant since two days) the Dam is expected to receive an inflow of ~3100 cumecs in the next 24 hrs, and likely to remain same/slightly receding trend.

In view of IMD forecast, the Kabini Dam on the river Kabini is at FRL and the present water level at 0600 hrs is about 695.74 m , and maintained constant by keeping gates opened without affecting downstream side of the Dam. The Dam is likely receiving an inflow of ~2000 cumecs in the next 24 hrs, and **the inflow may reduce as day progresses.**

The Harangi Dam on the river Harangi is nearing FRL and the present water level at 0600 hrs is about 869.85 m, the Dam is expected to receive an inflow of ~580 cumecs in the next 24 hrs, and **the inflow may decrease.**

The Hemavathy Dam on the river Hemavathy is nearing FRL and the present water level at 0600 hrs is about 889.28 m, the Dam is expected to receive an inflow of ~3000 cumecs inflow in the next 24 hrs, **the inflow may constant/ decrease as day progresses.**

The inflow to the Krishnaraja Sagar Dam is increasing and the present water level at 0600 hrs is about 747.52 m, and the Dam will receive ~5200 cumecs inflow in the next 24 hrs, and further increase will in the next few days due to the expected release of upstream Dams attaining FRL.

The inflow to the Bahdra Dam is increasing and the present water level at 0600 hrs is about 653.21 m, and will receive ~2300 cumecs inflow in the next 24 hrs, and **will slightly in rising trend.**

The concerned Dam authorities are advised to operate the reservoirs appropriately to avoid any flood like situation in the downstream, backwater effect in the upstream and to create sufficient cushion for expected inflow to the next 2-3 days. The downstream civil authorities and Dam authorities may be informed in well advance of any release.

Presently, the Gokak Falls (River-Ghataprabha), Sakleshpur (River -Hemavathy), Muthenkara (River-Kabini), Kudige (River-Cauvery) and Shimoga (River-Tunga), are now (10.08.2019, 1500 hrs) flowing 5.42 m, 1.91 m, 0.19m, 0.69m and 1.71 m above its highest water level ever recorded. The water level at different site of CWC in Upper Cauvery, Tunga and Bhadra are as under. Even, another four rivers also have recorded highest water level in addition to above rivers.
