**GOVERNMENT OF INDIA
CENTRAL WATER COMMISSION**

**KRISHNA BASIN
METEOROLOGICAL DATA
(JUNE 2015 – MAY 2016)**

**KRISHNA & CO-ORDINATION CIRCLE
HYDERABAD**

FEBRUARY – 2017

P R E F A C E

Realizing the need for a sound meteorological data base for planning and development of water resources on a river basin basis, the Government of India through Ministry of Water Resources, River Development and Ganga Rejuvenation has been making efforts to develop data bases covering all aspects of meteorological cycle. Reliable and continuous records of water resources data are essential for the optimum development of water resources. Conducting meteorological observations in addition to the hydrological observations in all-important river basins of India has, therefore, been one of the main activities of Central Water Commission (CWC).

Meteorological observations of Krishna Basin were started by CWC in early 1960. However, the meteorological Year Book, as a publication, has been started recently. This Meteorological Year Book contains rainfall and climatic data for the year 2015-16 (June 2015 to May 2016) collected at 38 Meteorological stations maintained by CWC in Krishna basin.

This publication contains the daily rainfall and Max. Min. temperatures, Evaporation, Wind direction, Humidity and Wind velocity during 2015-16 at these sites, in the data sheets appended.

Three field divisions of CWC, viz, Upper Krishna Division, Pune, Lower Krishna Division, Hyderabad under the control of Krishna & Co-ordination Circle, Hyderabad and Cauvery Division, Bengaluru under the control of C & S R Circle, Bengaluru have contributed in bringing out this Meteorological Year Book for the year 2015-16.

**KRISHNA BASIN
METEOROLOGICAL DATA
(JUNE 2015– MAY 2016)**

1.1 Scope

Central Water Commission is conducting Hydro-Meteorological observations along with Water Quality, Morphological survey and Flood Forecasting work etc. in Krishna Basin at 38 stations which were established under different schemes viz. K.G. Commission report (22 stations), 163 key station scheme (8 stations) and Flood Forecasting plan scheme (8 stations). All these stations are located in the states of Maharashtra, Karnataka, Telangana and Andhra Pradesh.

The stations where meteorological observations are being conducted are at Table-1

Table-1

1.2 SOURCE OF INFORMATION

During the year 2015-16 Meteorological observation have been conducted at 38 stations in the Krishna basin, in three field divisions of Central Water Commission viz. Upper Krishna Division , Pune, at 6 stations , Lower Krishna Division, Hyderabad at 24 stations and Cauvery Division, Bengaluru at 8 stations.

1.3 BASIN DESCRIPTION

River Krishna, is the second largest of the peninsular rivers, and fourth largest in India. It drains through the States of Maharashtra, Karnataka, Telangana and Andhra Pradesh. The Krishna basin is situated between East Longitudes $73^{\circ} 21'$ to $81^{\circ} 09'$ and North Latitudes $13^{\circ} 07'$ to $19^{\circ} 25'$. After flowing for about 1401 km, in West to East direction, it joins into the Bay of Bengal at downstream of Vijayawada. The Krishna river is having drainage area of 2,58,948 sq.km.

Table No.2: State wise distribution of drainage area

Name of State	Length (km)	Drainage area (sq.km)	% of Area
Maharashtra	306	69,425	26.8%
Karnataka	483	1,13,271	43.7%
Andhra Pradesh & Telangana	612	76252	29.5%

River Krishna rises at an elevation of 1337 m just north of Mahabaleswar, about 64 km from the Arabian Sea and flows from west to east through the States of Maharashtra, Karnataka, Telangana and Andhra Pradesh before it joins the Bay of Bengal at downstream of Vijayawada. The total length of river from its origin to outfall into the sea is 1401 km.

There are about 13 major tributaries which join the river Krishna along its 1401 km course, out of which, six tributaries are joining on right bank and remaining seven are on left bank. Among the major tributaries, the Ghataprabha, Malaprabha and Tunga Bhadra are the principal right bank tributaries which together contribute 35.45% of the total catchment area, whereas the Bhima, Musi and Munneru are the principal left bank tributaries which together contribute 35.62% of the total catchment area of 2,58,948 sq.km of river Krishna.

The Krishna Basin is triangular in shape, roughly, with its base along with Western Ghats, the apex at Vijayawada in Andhra Pradesh and the river Krishna itself forming the maiden with barrage in between hills of Eastern Ghats before its falling in Bay of Bengal.

Details of Rain Gauge stations and other salient features of Krishna River and its main tributaries are given below.

Table No. 3

Sl. No	Name of River	Elevation of source	Length of River/Tributary (km)	Catchment area (sq.km)	*Average annual rainfall (mm)	No. of Rain Gauge stations
	Main Krishna River	1337	1401	52227	489.4	11
1	Koyna	1441	118	4,890	-	-
2	Panchganga	1020	74	2,575	-	-
3	Dudhganga	870	103	2,350	-	-
4	Ghataprabha	884	283	8,829	294.7	1
5	Malaprabha	793	304	11,549	461.1	1
6	Bhima	945	861	70,614	562.5	7
7	Tunga Bhadra	610	531	71,417	550.0	13
8	Dindi	718	178	3,490	-	-
9	Peddavagu	707	109	2,343	-	-
10	Halia	708	112	3,780	329.2	1
12	Musi	661	265	11,212	607.4	1
12	Paleru	515	152	3,263	658.8	1
13	Munneru	238	195	10,409	546.4	2

* Average annual rainfall (mm) calculated for last 5 years data.

At present there are 660 Minor, Medium, Major dams and barrages(completed and ongoing) are in the Krishna River Basin by the year 2012. They are Prakasham barrage at Vijayawada. Pulichinthala dam, Nagarjuna Sagar Dam, Sri sailam dam, P.D.Jurala project, Narayanapur dam, Almatti dam, Koyna dam, Kadakvasla dam, Ghod Reservoir, Ujjanini dam, Tunga project, Bhadra project, T.B.Dam, Soundappi dam on Malaprabha, Hirakal dam on Ghatprabha, Dhuppal weir, V. Sagar project and Paleru reservoir etc.

1.4 PAST RECORDS OF METEOROLOGICAL DATA

1.4.1 METEOROLOGICAL SITES:

Meteorological observations like Rainfall, Maximum-Minimum temperature, Wind velocity, Evaporation and Humidity are being conducted at various stations. During the year 2015-16 Rainfall observations were conducted at all the 38 stations where as Maximum-Minimum temperature observations at 30 stations, Wind velocity observation at 11 stations, Humidity observations at 7 stations and Evaporation data observations were conducted at 8 stations. The date of availability of data, which included in this report at various stations, is shown at table 4.

Table No. 4

1.5 OBSERVATION TECHNIQUE

Meteorological observations at GDQ/GDSQ site are recorded regularly at 08.30hrs. The Meteorological instruments are installed in the premises of the site offices. The data observed at sites is sent to Division office for further processing. The observation technique applied for the collection of Meteorological data is given below.

1.5.1 RAIN FALL

Accuracy in the measurement of rainfall is of great importance in almost every field of its application and is significant in agriculture, irrigation, design of waterways, flood control, power generation and conservation of water resources at national and international levels.

The Ordinary Rain-gauge (ORG) is made of fiberglass reinforced plastic material as per Indian Standard Specification No. IS 5225: 1992 (old version 5225-1969). The details of ORG installed at sites are given below.

Measuring capacity of Rainfall in mm	Collector Nominal	Base	Bottle
100	200 cm ²	Small	2 liter
200	200 cm ²	Small	4 liter

Both the above 100 and 200 mm rainfall rain gauges are identical except for the bottle used. The rain gauges capacity can be changed by interchanging the collector bottles of different capacities. The 2 liter bottle is used only in regions where rainfall between two observations is likely to be less than 100 mm or where an additional cylinder is used to collect the overflow, if any, from the bottle. The rim diameter of the collector is 159.6 mm. The base and the collector are locked together by a set of two locking rings fixed firmly to the two parts.

Besides, a hasp and staple is provided to permanently lock the rain gauge with a padlock. Care is taken that the rain gauge is not installed on the ground that falls away steeply on the side of prevailing wind. Its distance from every object is generally kept four times the height of the object and never less than twice the height of the object, above rim of the gauge.

Rainfall is measured in terms of the depth of the water, which would be collected upon a level area of any size, assuming the rain to fall uniformly over the area at the rate which it falls uniformly over the area of rim collector of rain gauge. Thus, one centimeter of rainfall means that if the rain were to fall on the level surface which does not absorb it and from which it cannot run off or evaporate, it would form a sheet of water one centimeter in depth. To measure the rainfall, the water collected in the receiving bottle is poured in to especially graduated glass cylinders are manufactured according to Indian Standard Specification No. IS: 4849-4968. Care is taken to avoid spilling of the collected water.

As per their requirement, Indian Meteorological Department (IMD) has installed the rain gauges at some of the selected sites of CWC. The rainfall data from these sites is communicated to IMD, Pune as per their time schedule. At the remaining sites the rain gauges have been installed by field divisions of Central Water Commission. The date of installation of rain gauges (both ORG & SRRG) and the names of the agencies maintaining them is given at Table 5

Table No. 5

38	Kurundwad	01/05/2009	CWC	-	-

1.5.2 MAXIMUM MINIMUM TEMPERATURE

As general purpose maximum and minimum thermometer is used at sites for registering extremes of temperature during a day i.e, 24 hrs. The thermometer of 'A' pattern having range -40°C to $+60^{\circ}\text{C}$ with smallest scale divisions equivalent to 1.0°C (IS: 7000-1973) is generally used.

The thermometer is exposed in wooden louvered enclosure known as Stevenson screen, which support the thermometers and shield them from direct radiation from outside sources and from precipitation while allowing free circulation of air around them, and prevent accidental damage.

1.5.3 WIND VELOCITY

The accurate measurement of wind velocity is of great importance in meteorological research and practice, agriculture, transport, shipping, industry, engineering and in many other fields of human activity. The simplest and most common method of measuring wind velocity is by the use of a Cup Counter Anemometer in which the run of wind is indicated directly on a revolution counter. From the readings of the counter at the beginning and the end of a specified period i.e. one day, the mean wind velocity over the period is calculated.

The instrument specified in Indian Standard Specification No. IS:5912-1970 is used for this purpose at sites. The instrument is fixed at the top of a pole erected /roof top in the site office premises. The instrument has a cup wheel consisting of three conical cups with beaded edges, free to rotate in a horizontal plane. The cup wheel spindle is connected by worm gearing to a revolution counter mounted inside a waterproof housing. The gear ratio between the cup and counter spindles is so chosen that the run of the wind is shown.

1.5.4 HUMIDITY

Humidity data is of great importance in agriculture, Irrigation, ware housing especially for grains, transport, tourism, and meteorological research and in many other field of human activity. The simplest and most common method of measuring humidity is by the use of Dry & Wet bulb thermometer. The range of these thermometers is from -10°C to 50°C with smallest scale division's equivalent to 1.0°C . These thermometers are exposed in Stevenson screen. By the observed temperature from both these thermometers, humidity is determined from Hygrometric table.

1.5.5 EVAPORATION

The measurement of the amount of water evaporated from the soil and from free water surfaces is of great importance in agriculture, hydro meteorological studies, in the design, operation of reservoirs, and in irrigation and drainage systems. The rate of evaporation is defined as the amount of water lost by evaporation from a unit surface area, in unit time. This is proportionate to depth of water lost in unit time. The unit time is generally a day and the unit depth is in millimeters.

Evaporation is measured at sites using a Pan Evaporimeter. The values obtained with Pan Evaporimeter do not give directly the evaporation from a surface representative of natural conditions. They indicate, however, the order of magnitude of evaporation from such surfaces and comparative results over different areas need to be obtained by using identical instruments and similar exposures.

The pan Evaporimeter as specified in Indian Standard Specification No. IS: 5973-1970 is used at sites for observing evaporation data. The instrument consists of a cylindrical reservoir of fixed diameter and depth, filled with water to few centimeters below to rim. A fixed point gauge in a stilling well serves to indicate the level of water at each observation to bring the water level to the fixed point. The cross sectional area of the measuring cylinder is such that the number of millimeters of water added from the measuring cylinder divided by 100 gives the amount of water in millimeters which has

been evaporated from pan during a given interval of time. The reservoir is covered with wire mesh netting to protect the pan from birds and animals. A thermometer suspended from mount clamped to the side of the reservoir records the temperature of the water in the pan.

2.0 METEOROLOGICAL DATA

2.1 EXPLANATORY NOTES

The explanatory notes described here under is to assist in the interpretation of Meteorological parameters contained in the data presented here.

1. Meteorological parameters are observed at sites regularly at 08.30 hrs.
2. Water year ranges from 1st June of one calendar year to 31st May of the next calendar year and covers one complete Hydrological cycle.
3. Measuring authority refers to the field division responsible for the collection of Meteorological data.
4. All the Meteorological data viz. Maximum- Minimum temperature, Wind Velocity, Humidity and Evaporation is published in the form of daily observed data keeping in view of its utility in designing of hydrological, hydropower projects and for agriculture purposes etc.

2.2 METHOD OF PRESENTATION

In the succeeding pages, station wise Meteorological data (daily observed) are presented containing Maximum-Minimum temperature, Wind Velocity, Evaporation, Humidity and Rainfall data. The sequence of stations is arranged from the origin of the river to mouth giving the priority to an intermediate tributary station in a similar fashion.

Site wise Maximum-Minimum Temperature, Total Rainfall and Average Annual Rainfall

Sl. No	Site Name	District	Taluk	Temperature(⁰ C)		Total Rainfall (mm) 2015-16	Annual Rainfall(mm) as per IMD
				Max.	MIN.
