PREFACE

Water being a prime natural resource and basic human need, the National Water Policy lays stress on planning and development of water resources on a national perspective. The prime requisite of water resources planning is indeed an efficient information system on the quantity and quality of this time and space variable precious natural asset.

The Central Water Commission in its capacity as an premiere technical organisation in the field of water resources development endeavours the gigantic task of collection and compilation of Water Quality data incorporating the quality and quantity of available waters in various basins of the country. The Water Quality Books of various river basins of the country are being published by Central Water Commission in order to make its effective and efficient use.

The present volume contains information on various water quality parameters measured at Water quality stations of Ganga Basin(Main Stem) under the jurisdiction of Upper Ganga Basin Organisation, CWC, Lucknow for the year 2016-2017 using SWDES.

The valuable guidance and inspiration of Shri Pradeep Kumar, Member, RM, CWC, New Delhi and Shri S.K. Sibal, chief Engineer, Upper Ganga Basin Organisation, CWC, Lucknow is gratefully acknowledged.

I would like to place on record the special contribution made by officers and staff of Himalayan Ganga Division, Dehradun, Middle Ganga Division-2, Lucknow, Middle Ganga Division-III, Varanasi and Hydrological Observation Circle, Varanasi in compilation of information and publication of the report in present form.

It is hoped that this publication will be found useful by the planners, managers and users in the field of water resources.

1.INTRODUCTION

1.1. Scope

Rapidly increasing population, rising standard of living, exponential growth of industrialized and urbanization have exposed the Water Resources in general and rivers in particular to various form of degradation. It is therefore necessary to keep vigilant watch on quality of available fresh waters whose major sources in our country are rivers.

1.2. Source of Information

Two Divisions of Hydrological Observation Circle, Central Water Commission, Dehradun namely Himalayan Ganga Division, Dehradun and Middle Ganga Division No.-II, Lucknow and one Division of Hydrological Observation Circle, Central Water Commission, Varanasi namely Middle Ganga Division No.-III, Varanasi are conducting observations at 17 sites on Ganga (Main Stem).

Out of these 4 sites are maintained by Middle Ganga Division No.-III, Varanasi. 6 sites are maintained by Middle Ganga Division No.-II, Lucknow and 7 sites are maintained by Himalaya Ganga Division, Dehradun.

The finalised Water quality data for the year 2015-2016 is presented in the book. The details of the sites are given in Table I and location given in index Map of Ganga (Main stem).

| 17. | Varanasi on Ganga | GGOOOW3 |

1.3. Observation Technique

Water samples from all the Water Quality stations are collected on 1st working day of the month and transported to divisional laboratory where systematic analysis is conducted for the determination of constituents like pH, Specific Conductance, Potassium (as K+), Sodium (as Na+), Calcium (as Ca++), Magnesium (as Mg++), Iron (as Fe++), Nitrogen Ammonical (as NH4-N), Carbonate (as CO3--), Bicarbonate (as HCO3-), Chloride (as Cl-), Fluoride (as F-), Sulphate (as SO4--), Nitrate (as NO3-), Nitrite (as NO2-), Phosphate (as PO4---), Silica (as SiO2) and Boron (as B).

pH and Specific Conductance are determined by digital pH meter and conductivity meter. Cl-, CO3--, HCO3-, Ca++ and Mg++ are estimated by titration method. SO4-- is estimated by turbidimetric method with the help of Nephelometer. Na+ and K+ estimation is done by the method of flame emission with the help of Flame photometer and rest by the method of colorimetric estimation with the help of U-V Spectrophotometer.

In addition to the above, Dissolved Oxygen is also estimated. Biochemical Oxygen Demand, Chemical Oxygen Demand and Microbiological Parameters such as Total Coliform & Fecal Coliform are determined for selected sites.

2. WATER QUALITY DATA

2.1 Explanatory Notes

The explanatory notes, described hereunder, are designed to assist in the interpretation of various parameters contained in the data presented subsequently.

- i) The water samples are collected at a regular frequency of once in a month usually on the 1st working day from the main flowing portion of the stream.
- ii) Dissolved Oxygen is measured at the site laboratory within an hour of collection of samples.
- iii) The other water quality parameters are analysed at the divisional

laboratory.

iv) Chemical Indices, namely, Hardness Number, Sodium Percentage, Sodium Adsorption Ratio and Residual Sodium Carbonate are calculated as follows :

a. Hardness Number (HAR) is calculated by adding the total Ca++ and Mg++ in the sample expressed as equivalent parts of CaCO₃.

b. Sodium Percentage (S.P.) is given by

$$S.P. = (Na^+ \times 100) / (Ca^{++} + Mg^{++} + Na^+ + K^+)$$

Ionic concentrations being in meq/litre.

c. Sodium Adsorption Ratio (S.A.R.) is given by

$$S.A.R. = Na^+ / \{(Ca^{++} + Mg^{++})/2\}^{1/2}$$

Where the ionic concentration being in meq/litre.

d. Residual Sodium Carbonate (R.S.C.) is given by

$$R.S.C. = (CO_3^{--} + HCO_3^-) - (Ca^{++} + Mg^{++})$$

Where concentration of all the ions being in meq/litre.

v) Water year ranges from June 1st of one calendar year to May 31st of the next calendar year and covers one complete hydrological cycle.

vi) The gauging station code number is a unique seven column alpha-numeric reference number which facilitates storage and retrieval of water quality data in data banks. The first column is identifier of either an integral river basin or for convenience, a region having several contiguous river catchments. This is followed by a column which identifies an independent river system which either have one or more outlets to the sea or crosses international border to enter another country. The third, fourth and fifth column spaces denote first, second and third order tributaries respectively from the mouth upstream. The sixth and seventh column spaces indicate the location of the gauging station in one of the 225 slots earmarked on the river. The blank column spaces are filled by zero.

2.2 Method of Presentation

In the succeeding pages, station-wise water quality data and its trend is presented. History sheet , water quality data and water quality analysis tables are annexed separately.

History sheet gives concise description of the water quality observation station. The water quality analysis tables are given season-wise (flood, winter, summer) for the river water. The samples of water quality analysis are collected once a month as already mentioned in para 2.1 above.

3. WATER QUALITY TOLERENCE AND CLASSIFICATION

As per ISI-IS: 2296-1982, the tolerance limits of parameters are specified as per classified use of water (Table 1,2,3,4,5 Annexed) depending on various uses of water. The following classifications have been adopted in India

| Classification | Type of use |
|----------------|--|
| Class A | Drinking water source without conventional treatment but After disinfection. |
| Class B | Outdoor bathing. |
| Class C | Drinking water source with conventional treatment followed by disinfection. |
| Class D | Fish culture and wild life propagation . |
| Class E | Irrigation , Industrial cooling or controlled waste disposal. |

TABLE-1

TOLERANCE LIMITS FOR INLAND SURFACE WATERS, CLASS – A

| S. No. | Characteristic | Tolerance |
|----------|---|-----------------|
| (i) | pH value | 6.5 to 8.5 |
| (ii) | Dissolved Oxygen, mg/l, ((Min)) | 6.0 |
| (iii) | Bio-chemical Oxygen Demand ((Max)) | 2.0 |
| (iv) | Total Coliform Organisms, MPN/100 ml,((Max)) | 50 |
| (v) | Colour, Hazen units, ((Max)) | 10 |
| (vi) | Odour | unobjectionable |
| (Vii) | Taste | Agreeable taste |
| (viii) | Total Dissolved Solids, mg/l, (Max) | 500 |
| (ix) | Total Hardness (as CaCO ₃), mg/l , (Max) | 300 |
| (x) | Calcium Hardness (as CaCO ₃), mg/l, (Max) | 200 |
| (xi) | Magnesium (as CaCO ₃), mg/l,(Max) | 100 |
| (xii) | Copper (as Cu), mg/l, (Max) | 1.5 |
| (xiii) | Iron (as Fe), mg/l,(Max) | 0.3 |
| (xiv) | Manganese (as Mn), mg/l,(Max) | 0.5 |
| (xv) | Chlorides (as Cl), mg/l,(Max) | 250 |
| (xvi) | Sulphate (as SO ₄), mg/l ,(Max) | 400 |
| (xvii) | Nitrates (as NO ₂), mg/l,(Max) | 20 |
| (xviii) | Fluorides (as F,) mg/l,(Max) | 1.5 |
| (xix) | Phenolic compounds(as C ₆ H ₅ OH), mg/l,(Max) | 0.002 |
| (xx) | Mercury (as Hg), mg/l , (Max) | 0.001 |
| (xxi) | Cadmium (as Cd), mg/l,(Max) | 0.01 |
| (xxii) | Selenium (as Se), mg/l ,(Max) | 0.01 |
| (xxiii) | Arsenic (as As), mg/l,(Max) | 0.05 |
| (xxiv) | Cyanides (as CN), mg/l, (Max) | 0.05 |
| (xxv) | Lead (as Pb), mg/l, (Max) | 0.1 |
| (xxvi) | Zinc (as Zn), mg/l, (Max) | 15 |
| (xxvii) | Chromium (as Cr ₆₊), mg/l,(Max) | 0.05 |
| (xxviii) | Anionic detergents, (as MBAS), mg/l ,(Max) . | 0.2 |
| (xxix) | Poly-nuclear aromatic hydrocarbons (PAH), | 0.2 |
| (xxx) | (Min)eral oil, mg/l ,(Max) | 0.01 |
| (xxxi) | Barium (as Ba), mg/l ,(Max) | 1.0 |
| (xxxii) | Silver (as Ag), mg/l (Max) | 0.05 |
| (xxxiii) | Pesticides | Absent |
| (xxxiv) | Alpha emitters, $\mu\text{c}/\text{ml}$, (Max) | 10^{-9} |
| (xxxv) | Beta emitters, $\mu\text{c}/\text{ml}$, (Max) | 10^{-8} |

TABLE- 2

TOLERANCE LIMITS FOR INLAND SURFACE WATERS, CLASS – B

| S. No. | Characteristic | Tolerance |
|---------------|--|------------------|
| (i) | pH Value | 6.5 to 8.5 |
| (ii) | Dissolved Oxygen, mg/l,(Min) | 5.0 |
| (iii) | Biochemical Oxygen Demand (5 days at 20 °C), (Max) | 3.0 |
| (iv) | Total Coliform Organisms, MPN/100 ml, (Max) | 500 |
| (v) | Fluorides (as F)<mg/l, (Max) | 1.5 |
| (vi) | Colour, Hazen units, (Max) | 300 |
| (vii) | Cyanides (as CN), mg/l, (Max) | 0.05 |
| (viii) | Arsenic (as As), mg/l, (Max) | 0.2 |
| (ix) | Phenolic Compounds (as C ₆ H ₅ OH) mg/l, (Max) | 0.005 |
| (x) | Chromium (as Cr ⁶⁺), mg/l, (Max) | 1.0 |
| (xi) | Anionic detergents (as MBAS), mg/l, (Max) | 1.0 |
| (xii) | Alpha emitters, μ c/ml, (Max) | 10^{-8} |

TABLE- 3

TOLERANCE LIMITS FOR INLAND SURFACE WATERS, CLASS – C

| S. No. | Characteristic | Tolerance |
|---------------|--|------------------|
| (i) | pH Value | 6.5 to 8.5 |
| (ii) | Dissolved Oxygen, mg/l (Min) | 4.0 |
| (iii) | Biochemical Oxygen Demand | 3.0 |
| (iv) | Total coliform organisms, MPN/100 ml, (Max) | 5000 |
| (v) | Colour, Hazen units, (Max) | 300 |
| (vi) | Fluorides (as F), mg/l ,(Max) | 1.5 |
| (vii) | Cadmium (as Cd), mg/l, (Max) | 0.01 |
| (viii) | Chlorides (as Cl), mg/l, (Max) | 600 |
| (ix) | Chromium (as Cr6+), mg/l, (Max) | 0.05 |
| (x) | Cyanides (as CN), mg/l, (Max) | 0.05 |
| (xi) | Total Dissolved Solids, mg/l, (Max) | 1500 |
| (xii) | Selenium (as Se), mg/l, (Max) | 0.05 |
| (xiii) | Sulphates (as SO4), mg/l, (Max) | 400 |
| (xiv) | Lead (as Pb), mg/l, (Max) | 0.1 |
| (xv) | Copper (as Cu),mg/l,(Max) | 1.5 |
| (xvi) | Arsenic (as As), mg/l, (Max) | 0.2 |
| (xvii) | Iron (as Fe), mg/l, (Max) | 50 |
| (xviii) | Phenolic compounds (as C6H5OH), mg/l, (Max) | 0.005 |
| (xix) | Zinc (as Zn), mg/l, (Max) | 15 |
| (xx) | Insecticides, mg/l, (Max) | Absent |
| (xxi) | Anionic detergents (as MBAS), mg/l, (Max) | 1.0 |
| (xxii) | Oils and grease, mg/l, (Max) | 0.1 |
| (xxiii) | Nitrates (as NO3), mg/l,(Max) | 50 |
| (xxiv) | Alpha emititers, $\mu\text{c}/\text{mg}$, (Max) | 10^{-9} |
| (xxv) | Beta emitters, $\mu\text{c}/\text{ml}$, (Max) | 10^{-8} |

| (x) | Beta emitters, μ c/ml, (Max) | 10 ⁻⁸ |

4.0 TREND ANALYSIS / SCENARIO IN GANGA BASIN

The Ganga basin spreads over a total area of 10,86,000 Sq.km in India, Tibet (China), Nepal and Bangladesh. The major part of the geographical area of the Ganga basin lies in India and it is the biggest river basin in the country draining an area of 8,61,452 Sq.km, slightly more than one-fourth (26.3 %) of the total geographical area of the country. In India, it covers states eleven states viz; Uttar Pradesh, Madhya Pradesh, Rajasthan, Bihar, West Bengal, Uttarakhand, Jharkhand, Haryana, Chhattisgarh, Himachal Pradesh and Delhi. The basin is bounded by the Himalayas on the north, by the Aravalli on the west, by the Vindhya and Chottanagpur plateau on the south and by the Brahmaputra Ridge on the east. The Great Desert of Rajasthan and the Aravalli hills form the ridge between the Indus and Ganga drainage system.

The Ganga is the 20th longest river in Asia and the 41st longest in the world (Source: Philips World Atlas). The headwaters region of Ganga is the Himalayas dotted by number of mighty tributaries. The Bhagirathi river that rises from the Gangotri glacier near Gomukh at an elevation of about 7,010 m above mean sea level in the Uttarkashi district of Uttarakhand is considered as the source of Ganga river. It descends down the valley up to Devprayag where after joining another hill stream Alaknanda, it is called Ganga. Flowing downhill, the river is joined by a number of streams, such as the Mandakini, the Dhuli Ganga and the Pindar. The total length of river Ganga (measured along the Bhagirathi and the Hooghly) up to its outfall into Bay of Bengal is 2,525 km with 631 km navigable length.

The Ganga and its tributaries have formed a large flat and fertile plain in North India. The availability of abundant water resources, fertile soil, and suitable climate have given rise

to a highly developed agriculture based civilization and one of the most densely populated regions of the world. The major part of basin in Indian territory is covered with agricultural land accounting to 65.57 percent of the total basin area and 3.47 percent of the basin is covered by water bodies; supporting about 43 percent of its population (448.3 million as per 2001 census). The seasonality of flow in rivers in the basin is so acute and it causes floods, particularly in the portions of Bihar and West Bengal and led to the annual flood hazards and river bank erosion. Also the Himalayas in Uttarakhand and part of Himachal Pradesh falling in the basin experience snow falls.

Ganga has been a cradle of human civilization since time immemorial. Millions depend on this great River for physical and spiritual sustenance. It is a life-line, a symbol of purity and virtue for countless people of India. But due to rapid industrialization, increase in urban population, change in lifestyle, use of artificial fertilizer has led to deterioration in water quality of holy river Ganga. At certain stretches the river water is grossly polluted mostly due to industrial and municipal sewage discharge in the river Ganga.

Two Divisions of Hydrological Observation Circle, Central Water Commission, Dehradun namely Himalayan Ganga Division, Dehradun and Middle Ganga Division No.-II, Lucknow and one Division of Hydrological Observation Circle, Central Water Commission, Varanasi namely Middle Ganga Division No.-III, Varanasi are conducting observations at 17 sites on Ganga. Out of these 4 sites are maintained by Middle Ganga Division No.-III, Varanasi, 6 sites are maintained by Middle Ganga Division No.-II, Lucknow and 7 sites are maintained by Himalaya Ganga Division, Dehradun

Major river: River Ganga (main stem) is the major river of the Ganga basin in which Himalayan Ganga Division , Dehradun and Middle Ganga Division -2, lucknow has established a network of Three and Six Water quality monitoring station in Ganga basin respectively. Middle Ganga Division-3, Varanasi has established a network of Four Water quality monitoring station. The monitoring of surface water is done on monthly basis and water samples are analysed for physico-chemical and bacteriological parameters apart from the field observations.

W.Q. Network : Details of water quality station in Ganga basin are tabulated below.

| S.No. | Name of Site | River | Classification |
|---|--------------|-------|----------------|
| Himalayan Ganga division, Dehradun | | | |
| 1 | Deoprayag | Ganga | Base |
| 2 | Rishikesh | Ganga | Trend |
| 3 | Haridwar | Ganga | Trend |

| Middle Ganga division-2, lucknow | | | |
|--|---------------|-------|-------|

| 11 | Allahabad | Ganga | Flux |
| 12 | Mirzapur | Ganga | Flux |
| 13 | Varanasi | Ganga | Flux |

Analysis : To study the water quality / scenario in river Ganga, BOD, DO, fluoride, TDS , Faecal Coliform and Total Coliform parameters have been considered. Average value of these parameter for the period since inception(Inception to May 2016), last 10 years (Jun 2006 to May 2016) and last one year (Jun 2015 to May 2016) has been depicted in tables and figures depicted on the next pages.

4.2 River : ALAKNANDA (River 2) : The Alaknanda is considered to rise at the confluence and foot of the Satopanth and Bhagirath Kharak glaciers in Uttarakhand, though the Saraswati River tributary flowing from Mana Pass is longer; the two meet at Mana, India, 21 km from Tibet. Three km below Mana the Alaknanda flows past the Hindu pilgrimage centre of Badrinath. It meets the Bhagirathi River at Devprayag after flowing for approximately 190 km through the Alaknanda valley. Its main tributaries are the Mandakini, Nandakini, and Pindar rivers

5. General Remark / Conclusion about W.Q. trend –

River 1 Ganga(Main Stem) :

- The annual average BOD value since date of inception of the parameter observation, ranges from 1.8 mg/l at Rishikesh to 5.9 mg/l at Kanpur and more or less the same trend is observed during the last 10 years annual average values at all the sites. However during the current year 2016-17, the annual average values are appreciably high in comparision to past 10 years annual average data for the stations at Deoprayag, Rishikesh, Garhmukteshwar, Kachla Bridge, Fatehgarh, Ankinghat, Kanpur and Bhitura, which may be due to poor monsoon and consequently low flows in the river. The average values are more than 3.0 mg/l for all stations from Garhmukteshwar to Bhitura and all other station where it is below 3.0 mg/l. However the minimum observed values at all the sites are below 3.0 mg/l for all the sites except Bhitura. High BOD values in the range of 20-25 mg/l has been observed for stations from Kachlabridge to Bhitura.
- The average D.O values in general is above 6.0 mg/l for all stations on long term basis. However during the past 10 years there is declining trend in DO for the river stretch from Garhmukteshwar to Bhitura. Again during the current year the average values of DO are less in comparision to long term/past 10 year values for the stretch from Garhmukteshwar to Bhitura.
- The fluoride values are well below the tolerance limit of 1.5 mg/l for all the stations on all occasions.
- The TDS average values ranges from 121 to 251 mg/l and is well within the limit of 500 mg/l for Class A waters.
- The total coliform concentration in the river is very high and on an average it is about 5000 MPN/100 ml along the river from Rishikesh to Varanasi. At Deoprayag the average total coliform is around 2000 MPN/100 ml. The problem is more aggravated during the initial period of monsoon and during peak summer season.
- The faecal coliform on an average is about 2000 MPN/100 ml for the river except Deoprayag where it is on average around 1400 MPN/100 ml. Open defaecation, animal caracass, cattle wallowing etc. are some of the prime reasons for increased F. Coli values.

River 2 -Alaknanda :

- The BOD values at the stations on this river is less than 2.0 mg/l and the D.O values on average is more than 7.0 mg/l throughout the year and the waters qualifies as Class A waters from DO and BOD point of view.
- Average fluoride value ranged 0.1 to 0.8 mg/l and is safe for human consumption with respect to the tolerance limit of 1.5 mg/l.

- Average TDS value are around 100 mg/l which is within the tolerance limit of 500 mg/l for Class A water.

River 3 Bhagirathi :

- Average BOD value is around 1.5 mg/l and D.O values are more than 7.0 mg/l for both the stations at Uttarkashi and Koteshwar and classify under Class A waters.
- The Fluoride values ranges in between 0.08 to 0.92 mg/l which is well below the tolerance limit of 1.5 mg/l.
- The TDS values on average is around 90 mg/l.
- The Total coliform and Faecal coliform at the two stations ranges from 1700-2000 MPN/100 ml and 1000 – 1500 MPN/100 ml respectively with higher values being observed at Uttarkashi.

The total and Faecal coliforms in the whole stratch of river from Uttarkashi to Varanasi is a matter of concern as its presence can cause health issue amongst people using river water specially for bathing and other rituals. The BOD values in middle stretch of river Ganga from Garhmukteshwar to Varanasi during summer season is very high and proper measures are required to control the high BOD values.
