## प्रस्तावना

मौसम संबंधी आकड़ों की सही जानकारी, कृषि, सिचाई, उद्योग, उड्डयन, परिवहन एवं पर्यटन आदि क्षेत्रों के लिए अति उपयोगी है। बेसिन में जल की उपलब्ध मात्रा एवं प्रवाह के आकलन तथा विभिन्न योजनाओं के क्रियान्वयन हेतु मौसम से संबंधित आकड़ों को ध्यान में रखना आवश्यक है।

केन्द्रीय जल आयोग का क्षेत्रीय कार्यालय, ऊपरी गंगा बेसिन संगठन, लखनऊ, उत्तर प्रदेश अपने गेज एवं प्रवाह मापन स्थलों पर सतही जल की मात्रा के आकलन के साथ जल गुणवत्ता मापन, निलम्बित गाद भार आकलन तथा बाढ़ पूर्वानुमान स्थलों पर बाढ़ पूर्वानुमान की गणना के साथ वर्षा तथा अधिकतम—न्यूनतम तापमान जैसे मौसम संबंधी आकड़ों भी एकत्रित कर रहा है। इन सभी ऑकड़ों में अन्तर—संबंध है। जल वैज्ञानिक ऑकड़ों का विश्लेषण, मौसम संबंधी ऑकड़ों के बगैर यथार्थता पूर्वक नहीं किया जा सकता।

ऊपरी गंगा बेसिन संगठन, लखनऊ, उत्तर प्रदेश, केन्द्रीय जल आयोग के अधीनस्थ कार्यालय, जल विज्ञानीय प्रेक्षण परिमण्डल देहरादून ने वर्ष 2015–16 के दौरान, परिमण्डल के 39 जल मौसम वैज्ञानिक प्रेक्षण स्थलों पर मौसम संबंधी ऑकड़े एकत्र किये गये हैं।

आशा है, इस पुस्तक में संकलित आकड़ों विकास से सम्बन्धित विभिन्न परियोजनाओं के अभिकल्पन के लिए सहायक सिद्ध होंगे। इस पुस्तक को प्रकाशित करने में **श्री संजय कुमार सिब्बल, मुख्य अभियन्ता, ऊपरी गंगा बेसिन संगठन, केन्द्रीय जल आयोग, लखनऊ द्वारा मूल्यवान मार्गदर्शन** दिया गया, जिसके लिये यह कार्यालय उनका आभारी है।

मैं हिमालयी गंगा मण्डल, देहरादून, मध्य गंगा मण्डल—2, लखनऊ एवं जल विज्ञानीय प्रेक्षण परिमण्डल, केन्द्रीय जल आयोग, देहरादून के उन सभी अधिकारियों एवं कर्मचारियों के समर्पण की सराहना करता हूँ जिनके सहयोग से इस पुस्तक को वर्तमान स्वरूप में समयबद्ध तरीके से प्रकाशित किया जा सका है।

स्थान—देहरादून

(सुधीर कुमार)  
अधीक्षण अभियन्ता

# **1. INTRODUCTION**

## **1.1 SCOPE**

Central Water Commission is conducting Meteorological observations along with Hydrological observations, Sediment load observations, Water Quality observations and Flood Forecasting work etc. in different river basins. During the water year 2015-16 meteorological observations in the part of Ganga Basin (within administrative jurisdiction of HOC, Dehradun) were conducted at 39 stations under Himalayan Ganga Division, Dehradun & Middle Ganga Division-II, Lucknow. All of these stations are located in the state of Uttarakhand & Uttar Pradesh.

The details of the stations where Meteorological observations were conducted during the year 2015-16 are given in Table-1.

## 1.2 Sources Of Information

The data presented in this meteorological year book has been observed by the Himalayan Ganga Division, Dehradun and Middle Ganga Division- II, Lucknow, under HOC, Dehradun.

## 1.3 Basin Description

- 1.3.1 The main Ganga Basin extends over an area of 1,07,331 sq. km. and covers large areas in the states of Uttarakhand, Uttar Pradesh, Bihar and West Bengal. The state wise distribution of the drainage areas is shown in Table 1.

**T A B L E 2**

Name of State	Drainage area (sq.km.)	Percentage to total drainage area
Uttarakhand and Uttar Pradesh	71,302	66.4
Bihar	9,182	8.6
West Bengal	26,847	25.0
Total	1,07,331	100.0

1.3.2 The river Ganga rises in the Gangotri glacier in the Himalayas at an elevation of about 3,982 m above the mean sea level in the Uttarkashi district of Uttarakhand. At its source, the river is called the Bhagirathi. It descends down the valley upto Deoprayag. The river Alaknanda rises from the Indo-Tibetan border in the district Chamoli of Uttarakhand. Flowing through district Chamoli and serving as border line between Tehri Garhwal and Pauri Garhwal districts, it joins the river Bhagirathi at Deoprayag. The combined stream is called the 'Ganga'.

The river continues to flow down in torrents and cascades along the valley for a distance of about 160 km. and emerges into the plains at Haridwar in Uttarakhand.

The first hydrological observation site under this circle on Ganga is Deoprayag which is the confluence point of river Bhagirathi & Alaknanda and is also the initial point of Ganga main river. At Kannauj the first major tributary i.e. Ramganga meets the main river Ganga at left bank. The upper reaches of Gomti and Sai rivers are in the jurisdiction of HOC, Dehradun. The tributary Sai meets Gomti near Maighat(under HOC, Varanasi) and finally Gomti joins the river Ganga in far downstream of Varanasi from left. The last site under HOC, Dehradun in the main Ganga river is Dalmau, in Sai river is Raebareli and in Gomti river is Lucknow.

After leaving Uttar Pradesh, the river Ganga enters Bihar in the Bhojpur district and receives two important tributaries, the river Ghaghra from the left at Chhapra and the Sone from the right at Maner. The river Gandak, yet another left bank tributary, joins Ganga at Patna. The river in its course through Munger district, is wide and deep at all times of the year. At Pathar Ghat in

Saharsa district, the river receives the river Kosi, an important left bank tributary. Apart from the river Sone, other important tributaries to join the river Ganga on its right bank in Bihar are the river Pun-Pun, Kiul, Man, Chandan and Gerua.

After its confluence with the river Kosi, the Ganga continues its eastward flow in Bihar for about 40 km. As it enters West Bengal, the river swings round the Rajmahal hill range opposite to Manihari Ghat and starts flowing almost due south. The delta of the river Ganga can be said to start from Farakka in West Bengal.

The river divides into two arms about 40 km downstream of Farakka. The left arm, called the river Padma, flows eastward into Bangladesh while the right arm of the river, called the Bhagirathi, continues to flow south in West Bengal. After receiving tributaries, Dwarka and Ajay from right, Bhagirathi receives Jalangi just above Nabadwip town.

After its confluence with Jalangi, Bhagirathi is known as the river Hooghly. Calcutta, the biggest city in India, is situated on the banks of the river Hooghly. After Calcutta, the river receives Damodar and Rupnarayan tributaries from the right. After Diamond Harbour, the river resumes a southerly direction until it falls into Bay of Bengal.

The left arm of the main Ganga which flows into Bangladesh, where it is called as the river Padma, is joined by the river Brahmaputra and Meghna. All these rivers form a huge delta before ultimately falling into Bay of Bengal.

The total length of the river Ganga, from its point of origin to the point where it falls into the sea is about 2,525 km (measured along Bhagirathi and Hooghly) out of which 1,450 km lie in Uttarakhand and Uttar Pradesh, 445 km in Bihar and 520 km in West Bengal. The river forms the boundary between Uttar Pradesh and Bihar for over a length of 110 km. The salient details of its major tributaries are enumerated below.

**Pinder** river is tributary of river Alaknanda. It originates from the glacier near Nandakot peak in Chamoli district. It flows in south direction, then south-west and then north- west and joins river Alaknanda at left bank in Karanprayag. The two hydrological observation stations on this river are Nandkeshri and Karanprayag. The length of the river till Karanprayag is 120 km and catchment area is 1905 sq km.

**Mandakani** river is tributary of river Alknanda. It originates from kedarnath hills in Rudraprayag district of Uttarakhand. Initially, it flows in south-west direction till Tilwara, later on in south-east and joins river Alknanda at right bank in Rudraprayag. The two hydrological observation stations on this river are Ganganagar and Rudraprayag. The length of the river till Rudraprayag is 71 km and catchment area is 1649 sq km.

**Nayar** river is tributary of river Ganga. It emerges from Dudhatoli ranges of Garhwal in Pauri district of Uttarakhand. Initially, it flows in south direction then slowly turns in south-west and later in west direction and joins river Ganga at left bank near Vyas Ghat. The hydrological observation station on this river is Marora. The length of the river till Marora is 85 km and catchment area is 1934 sq km.

**Ramganga** River emerges from Dudhatoli ranges in Pauri Garhwal District of Uttarakhand. The length of Ramganga River is 155 km and the catchment area of the basin is 30,641 km square. This river flows to the southwest from kumaun Himalays. Ramganga is a tributary of Ganga, Which originates from the high-altitude Zone of 800 m to 900. It passes through Corbett National Park, near Ramnagar in Nainital district and descends to the plains. The cities alongside the banks of Ramganga River are Moradabad, Bareilly, Badaun, Shahjahanpur and Hardoi of Uttar Pradesh state.

After Kalagarh dam, Ramganga flows in the southeast direction and finally joins Ganga on its left bank, near kanauj.

The entire river flows in Uttarakhand and Uttar Pradesh states. The important tributaries of Ramganga are Kho, Baigul, Gangan, Aril, Kosi and Deoha also known as Gorra. Ramganga flows through various places and consolidates many places into one. It passes through Taal, Chaukhutia, Bhagoti, Masi Bhikyasen etc. which comes under kumaon region.

**Kosi** is one of the major tributaries of river Ramganga and is one of the important river of northern part of Uttar Pradesh and Uttranchal. The major areas, which are parts of Kosi river basin, are Tota-aam and Garajiya in Almora, city Ramnagar (Distt. Nainital), Kashipur (Distt. Udhamsingh Nagar), Dadiyal, Swar, Lalpur, and city Rampur.

The river Kosi originates from village Budha Peenath of Kausani region of district Almora (UK). After traveling a distance of about 100 km in lower Himalayas with higher velocity, it emerges at Ramnagar in Indo-Gangetic Plains, after which the velocity reduces considerably. In the initial stretch through the Shivalik range of Himalayas, it takes water from a number of major streams, and a major portion is diverted into a canal for irrigation purposes. After Ramnagar, it flows through the famous rice-belt area of Kashipur. The total length of the river is about 240 km.

**Gomti** River originates near Mainkot, about 3 km east of the Pilibhit town in Uttar Pradesh, at an elevation of 200 m. The river drains the area between Ramganga and Ghaghra systems. The total length of the river is about 940 km and it flows entirely in the State of Uttar Pradesh. The total drainage area of the river is 30,443 sq km. The river flows through Sahajahanpur, Kheri, Lucknow, Barabanki, Sultanpur, Faizabad, Jaunpur, Varanasi and Ghazipur districts before merging into the Ganga about 6 km upstream of Saidpur town located on border of Varanasi and Ghazipur districts. Lucknow, the capital city of Uttar Pradesh, is situated on the banks of the Gomti River. The main tributaries of the Gomti River are the Gachai, the Sai, the Jomkai, the Barna, the Chhuha and the Kalyani. The first site on Gomti under the Circle is Neemsar.

**1.3.3** The rainfall in the basin is dominated by the south-west monsoon from June to September which varies from region to region. The highest rainfall (2,142 mm) in Uttarakhand is in Dehradun district. The lowest rainfall (663 mm) in Uttar Pradesh is in Aligarh district. The highest rainfall (1,377 mm) in Jharkhand is in Santhal Parganas district. The lowest rainfall (992 mm) in Bihar is in Munger district. In West Bengal, the Howrah district gets the highest rainfall (1,629 mm) while the Nadia district gets the lowest (1,310 mm).

In the head reaches of the river, before the river comes out into the plains at Haridwar, the climate is influenced by the Himalayas. The winter is very cold whereas the summer is moderate. In the plains, however, the summer is very hot with the maximum temperature rising upto  $48^{\circ}\text{C}$ . Winter temperatures in the plains fall as low as  $1^{\circ}\text{C}$ . In the lowermost reach of the river in West Bengal, however the climate is moderated by the presence of a large number of channels and tanks.

**1.3.4** Prior to independence only two projects, namely, the Upper Ganga Canal and the Lower Ganga Canal were in existence in the basin. During the plan period, capacity of both projects has been increased. The Upper Ganga Canal takes off from the Ganga at Haridwar and Lower Ganga Canal takes off from the Narora weir in Bulandshahar district. The Parallel Lower Ganga Canal is constructed in Aligarh district.

The Tehri Dam, a multipurpose project, is on river Bhagirathi near Tehri town. The Middle Ganga Canal project is in Bijnor district of Uttar Pradesh.

In addition to the above projects, a number of pumped canal irrigation schemes are provided in Uttar Pradesh and Bihar namely Dalmau, Narayanpur, Bhopauli, Balua, Deokali, Zamania, Chausa, Dokrnala, Bateshwarthan, Surajgarh, Sakrigali, AjgabiNath and Suksenaghata.

Another important project on the river Ganga is the Farakka Barrage in the Murshidabad district of West Bengal. The project aims at the preservation of the port of Calcutta by inducting certain quantum of water into Bhagirathi-Hooghly.

## **1.4 PAST RECORDS OF METEORLOGICAL DATA**

### **1.4.1 GROUP A SITES: SITES IN OPERATION**

Meteorological observations like Rainfall, Maximum - Minimum Temperature, are being conducted at various stations. During the year 2015 - 2016 rainfall observations were conducted at all the 38 stations where as Maximum-Minimum Temperature observations, were conducted at 32 stations. The date with effect from which the published data of various stations is available is given in Table 3.

## **1.5 Observation Technique**

Meteorological observations are recorded regularly at 08.30 hrs. The Meteorological instruments are installed in the premises of site offices. The data observed at sites is sent to Division office for further processing. The observation technique applied for the collection of Meteorological data is given below.

### **1.5.1 RAIN FALL**

Accuracy in the measurement of rainfall is of great importance in almost all fields of application and is of special significance in agriculture, irrigation, design of waterways, flood control, power generation and conservation of water resources at national and international levels.

The Ordinary Rain-gauge (ORG) is made of fiberglass reinforced polyester material as per Indian Standard Specification No. IS 5225:1992(old version 5225- 1969). The details of ORG s installed at sites are given below.

Nominal Measuring Capacity, mm of Rainfall	Collector	Base Bottle
100	200 cm <sup>2</sup>	2 litre
200	200 cm <sup>2</sup>	4 litre

Both the above 100 and 200 mm rainfall rain gauge are identical except for the bottle used. The rain gauge capacity can be changed by interchanging the collectors on the base and having bottles of different capacities. The 2 litre bottle is used only in regions where rainfall between two observations is likely to be less than 100 mm or where an additional cylinder is used to collect the overflow, if any, from the bottle. The rim diameter of the collector is 159.6 mm. The base and the collector are locked together by a set of two locking rings fixed firmly to the two parts. Besides, a hasp and staple is provided to permanently lock the rain gauge with a padlock. Care is taken that the rain gauge is not installed on the ground that falls away steeply on the side of the prevailing wind. Its distance from every object is generally kept four times the height of the object and never less than twice the height of the object, above the rim of the gauge.

Rainfall is measured in terms of the depth of the water, which would be collected upon a level area of any size, assuming the rain to fall uniformly over the area at the rate at which it falls uniformly over the area of rim collector of rain gauge. Thus, one cm of rainfall means that if the rain were to fall on a level surface which does not absorb it and from which it cannot run off or evaporate, it would form a sheet of water one cm in depth. To measure the rainfall, the water collected in the receiving bottle is poured into a specially graduated glass cylinder, which is placed on a level surface. These measuring glass cylinders are manufactured according to Indian standard Specification No. IS: 4849-1968. Care is taken to avoid spilling of the collected water.

As per their requirement, Indian Meteorological Department (IMD) has itself installed the rain gauges at some of the selected sites of CWC. The rainfall data from these sites is communicated to IMD, Lucknow as per their time schedule. At the remaining sites the rain gauges have been installed by the

Himalayan Ganga Division, Dehradun & Middle Ganga Division- II, Lucknow, under HOC, Dehradun. The date of installation of rain gauges (both ORG & SRRG) and the names of the agencies maintaining them is given in Table 5.

### 1.5.2 MAXIMUM MINIMUM TEMPERATURE

A general purpose maximum and minimum thermometer is used at sites for registering extremes of temperature during a day i.e. 24 hrs. The thermometers having range  $-40^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$  with smallest scale divisions equivalent to  $1.0^{\circ}\text{C}$  (IS: 7000-1973) is generally used.

The thermometer is exposed in wooden louvered thermometer screen, commonly known as Stevenson Screen, which support the thermometers and shield them from direct radiation from outside sources and from precipitation while allowing free circulation of air around them, and prevent accidental damage.

## 2. METEORLOGICAL DATA

### 2.1 EXPLANATORY NOTES

The explanatory notes Described hereunder are given to assist in the interpretation of Meteorological parameters contained in the data presented. The notes are, therefore, applicable in so far as the data presented in this book are concerned.

1. Meteorological parameters are observed at sites regularly at 08.30 hrs.
2. Water year ranges from 1st June of one calendar year to 31st May of the next calendar year and covers one complete Hydrological Cycle.
3. Measuring authority refers to the field division responsible for the collection of meteorological data. The name of the division is abbreviated by taking first alphabet of each word followed by alphabet DN for Division. Thus Middle Ganga Division is denoted by MGDN.
4. All the Meteorological data viz. Maximum - Minimum temperature is published in the form of daily observed data keeping in view of its utility in designing of hydrological, hydropower projects and for agriculture purposes etc.
5. The Gauging Station code number is a unique nine - column ,Alpha-numeric Reference number, which facilitates storage and retrieval of Meteorological data in data banks. The first two columns are identifier of measuring authority. Third & fourth columns are for zone/basin. Fifth & sixth columns are for Independent River and last three i.e. seventh, eighth and ninth columns are for Station numbers.

## **2.2 METHOD OF PRESENTATION**

In the succeeding pages, Station wise meteorological data (daily observed) are presented showing Maximum-Minimum temperature, and Rainfall data. The sequence of station is arranged from origin to the mouth of the river giving the priority to an intermediate tributary station in a similar fashion. Site wise information of Annual rainfall for 2011-12, 2012-13, 2013-2014, 2014-2015 and 2015-2016 and maximum/minimum temperature for 2015-16 are shown in Table-6(Page125-126).
