GOVERNMENT OF INDIA
CENTRAL WATER COMMISSION
NEW DELHI – APRIL 1991

**GOVERNMENT OF INDIA
MINISTRY OF WATER RESOURCES
CENTRAL WATER COMMISSION**

**KEY HYDROLOGICAL OBSERVATION STATIONS
IN INDIA UNDER
CENTRAL WATER COMMISSION**

**NEW DELHI
1991**

FOREWORD

Central Water Commission is an apex Technical Organisation in the field of Water Resources Development. From inception it has been charged not only with the responsibility of collection of data relating to water ways, rivers, and runoff, etc. but also coordinating such collection and to analyse and publish the data with a view to have a National Data Bank in respect of hydrological data.

Since long a need was felt to have details of all the hydrological observation stations operated by Central Water Commission at one place. The details include the name of the river on which the site is located; status of site i.e. whether it is a gauge site or a gauge discharge site or a gauge discharge silt site or a gauge discharge water quality site; date of opening of site; type of site i.e. whether it is a Flood Forecasting site or a Base station or a Wireless Station; its catchment area; its latitude and longitude; the Controlling field Circle and Controlling field Division of Central Water Commission; the name of the State and District in which it is located; Zero RL and the site code. It also explains in detail the system followed for the code numbering of sites. This system is now being followed in all the field units of Central Water Commission. Basin-wise details and State wise details of hydrological observation stations have also been presented.

This Booklet has been prepared based on the valuable work done by the Officers and staff of River Data Directorate of Central Water Commission. The report is prepared under the guidance of Shri R.K.Parashar, Director by Shri R.Babu Janakiraman, Director (PP). The significant contribution made by Shri S.K. Gupta, Dy. Director in bringing out this brochure needs special mention. The assistance rendered by S/Shri Haridas Chaudhuri, J.K.Sharma, A.K. Pal, Narender Dev, S. Chatterjee, Mrs Veena Gupta, Nita Gupta in putting the entire text along with the tables on the Personal Computer and finally comparing it is also acknowledged.

I hope, this brochure would be found useful to all the water resources planners.

(S.S. IYER)
CHIEF ENGINEER (RM)
CENTRAL WATER COMMISSION

PREFACE

Systematic and scientific hydrological observation and data collection forms the basic need in the rational assessment of surface water resource of river basins, one of the foremost inputs for the overall planning and development of the basin. Being the apex national body for the development of surface water resources of the country, the Central Water Commission obviously plays a key role in having established a national network of hydrological observation stations on all the major river basins. As on today 570 observation stations covering 12 basins for water level, discharge, sediment and water quality form the national network. This Booklet contains details of the hydrological stations under operation by the Central Water Commission in different basins, giving such details as name of the river, status of the site, date of opening, location, catchment area, controlling offices, State and district, site code number, etc.

Despite the above number of stations being run by the Central Water Commission, the same falls short of the World Meteorological Organisation (WMO) standards. Efforts are constantly being made to establish more and more number of observation sites commensurate with availability of Plan funds, to upgrade the network to the required standards. Presently, the sites in the Indus basin , other than Chenab , do not form part of the Central Water Commission's network. Proposals have been mooted to extend and enlarge the network, covering also the Indus basin.

Being a dynamic process, the observation network, no doubt, calls for periodic updating; nevertheless, I hope this Booklet would find use to those engaged in the water resources development of the country.

(C. SUDHINDRA)

Member, Central Water Commission &
ex-officio Additional Secretary
to the Government of India

A. ABBREVIATIONS AND NOTATIONS

In the tables giving details of hydrological observation stations, the different columns provided therein indicate details as below:

- (1) Column No.1 gives the serial number of site;
- (2) Column No.2 indicates the name of river and name of site; e.g.

Godavari/ : The upper name is the name of the river
Chass and the lower one of the site;

- (3) Column No.3 gives the status code of the site which is given as below :

<u>Type of site</u>	<u>code</u>
(a) Gauge discharge site	1
(b) Gauge discharge and silt site	2
(c) Gauge discharge and water quality site	3
(d) Gauge, discharge, silt and water quality site	4

- (4) Column No.4 gives the date of start of gauge, discharge, silt observation and water quality work. The date given in the first line indicates the starting date of gauge & discharge observations, the date given in the second line indicates the starting date of silt observations and date given in third line indicates the starting date of water quality observation as per the status of the site. In these details, first 2 digits indicate the day, next two digits indicate the month and the next two digits indicate the year; e.g. 6th December, 1976 is shown as 06-12-76;

- (5) Column No.5 gives the status of the site regarding flood forecasting details. The notations used are as below :

FF - Flood Forecasting site,
BS - Base Station, and
WS - Wireless Station;

(6) Column No.6 gives the catchment area of the river upto the site in Sq.Km.;

(7) Column No.7 gives the geographical location of the site in latitude and longitude; e.g. the location is shown as

9-24/
76-39

which means that the latitude is 9° - 24' North and the longitude is 76° - 39' East.

(8) Column No.8 gives the codes of the controlling field Circle of CWC under which the site is located. The codes used are as below :

<u>S.No.</u>	<u>Name of the Circle</u>	<u>code</u>
1.	NORTHERN INVESTIGATION CIRCLE, JAMMU	A
2.	UPPER YAMUNA CIRCLE, NEW DELHI	B
3.	UPPER GANGA CIRCLE, NEW DELHI	C
4.	MIDDLE GANGA CIRCLE, VARANASI	D
5.	LOWER GANGA CIRCLE, MAITHON	E
6.	BRAHMAPUTRA BARAK CIRCLE, GUWAHATI	F
7.	MEGHNA CIRCLE, NEW DELHI	G
8.	WESTERN RIVERS CIRCLE, NAGPUR	H
9.	EASTERN RIVERS CIRCLE, BHUBANESHWAR	J
10.	GODAVARI CIRCLE, HYDERABAD	K
11.	KRISHNA CIRCLE, HYDERABAD	L
12.	CAUVERY AND SOUTHERN RIVERS CIRCLE, BANGALORE	M

(9) Column No.9 gives the codes of the controlling field division of CWC under which the site is located. The codes used are as below :

<u>S.No.</u>	<u>Name of the Division</u>	<u>code</u>
1.	CHENAB INVESTIGATION DIVISION, JAMMU	1
2.	UPPER YAMUNA DIVISION, NEW DELHI	2

<u>S. No.</u>	<u>Name of the Division</u>	<u>code</u>
	HIMALAYAN GANGA DIVISION, DEHRADUN	3
4.	LOWER YAMUNA DIVISION, AGRA	4
5.	CHAMBAL DIVISION, JAIPUR	5
6.	MIDDLE GANGA DIVISION NO.I, LUCKNOW	6
7.	MIDDLE GANGA DIVISION NO.II, LUCKNOW	7
8.	MIDDLE GANGA DIVISION NO.III, VARANASI	8
9.	MIDDLE GANGA DIVISION NO.IV, PATNA	9
10.	MIDDLE GANGA DIVISION NO.V, PATNA	10
11.	LOWER GANGA DIVISION, BERHAMPORE	11
12.	DAMODAR DIVISION, ASANSOL	12
13.	UPPER BRAHMAPUTRA DIVISION, DIBRUGARH	13
14.	MIDDLE BRAHMAPUTRA DIVISION, GUWAHATI	14
15.	LOWER BRAHMAPUTRA DIVISION, JALPAIGURI	15
16.	MEGHNA INVESTIGATION DIVISION, SHILLONG	16
17.	MEGHNA DIVISION, AGARTALA	17
18.	TAPI DIVISION, SURAT	18
19.	MAHI DIVISION, AHMEDABAD	19
20.	BRAHMNI SUBARNAREKHA DIVISION, BHUBANESHWAR	20
21.	EASTERN RIVERS DIVISION, BHUBANESHWAR	21
22.	MAHANADI DIVISION, BURLA	22
23.	UPPER GODAVARI DIVISION, HYDERABAD	23
24.	LOWER GODAVARI DIVISION, HYDERABAD	24
25.	WAIN GANGA DIVISION, NAGPUR	25
26.	UPPER KRISHNA DIVISION, PUNE	26
27.	LOWER KRISHNA DIVISION, HYDERABAD	27

<u>S.No.</u>	<u>Name of the Division</u>	<u>code</u>
28.	SOUTHERN RIVERS DIVISION, COIMBATORE	28
29.	CAUVERY DIVISION, BANGALORE	29
30.	SOUTH WESTERN RIVERS DIVISION, COCHIN	30
31.	NARMADA DIVISION, BHOPAL	31

(10) Column No.10 gives the name of the State where the site is located;

(11) Column No.11 gives the name of the district where the site is located;

(12) Column No.12 gives the zero reduced level of the gauge in metres fixed at site for the sake of reading water level which is fixed with reference to GTS datum; and

(13) Column No.13 gives the station code number of the site.

B. SYSTEM FOR CODE NUMBERING OF SITES

It became necessary to devise unique codes for all the basins and rivers countrywide. This was drafted, discussed and adopted. Detailed instructions in this regard were circulated to all the field units of Central Water Commission for implementation.

The hydrological station code number comprises two elements viz. the river identification and station location on the identified river. The rivers are permanent geographical features whereas the hydrological stations are movable entities and can be established or closed according to necessity. Thus, for systematic coding, it is essential to first devise river code numbering system which can accommodate all rivers of the country under one uniform pattern. Once the rivers are assigned suitable code numbers, as a second step sufficient slots can be earmarked over the river length to uniquely identify station location either existing or closed or proposed. With this in view, the following steps were taken to evolve station code numbers :

- i) In all 168 independent rivers have been identified by map studies (Using Irrigation Atlas);
- ii) An independent river is taken to be one which after flowing through Indian territory either meets sea in Indian Territorial Waters or crosses international border to enter another country;
- iii) The main / independent rivers having length of 50 km. or more in their Indian reach have been considered for assigning code numbers;
- iv) Similarly, all tributaries of the main rivers falling in Indian Union will be considered for assigning code numbers.

The selected independent rivers are such that some have 4th order tributaries whereas others do not have even single first order tributary. With a view to uniformly accommodating each and every river under suggested coding system, groupings as mentioned below are made :

- (i) The country is divided into 6 major basins or zones, namely, Indus, Ganga, Brahmaputra, Meghna, East Coast Rivers and West Coast Rivers. The number of independent rivers in each zone is given below :

<u>Zone/Basin</u>	<u>No. of rivers</u>	<u>Code</u>
1. Indus	6	(I)
2. Ganga	1	(G)
3. Brahmaputra	6	(B)
4. Meghna	33	
5. East Coast Rivers	50	
6. West Coast Rivers	72	

ii) Meghna basin, East Coast Rivers and West Coast Rivers have more independent rivers which could not be accommodated in 7 digit coding system. They have therefore been further divided into 3 smaller zones each ; e.g.

Under Meghna basin there will be :

	<u>No. of rivers</u>	<u>Code</u>
a) Rivers of Meghalaya	13	(M)
b) Barak and Rivers of Tripura	12	(T)
c) Rivers of Mizoram and Manipur	8	(S)

Under East Coast Rivers Zone there will be :

a) East Coast Rivers of West Bengal and Orissa	13	(E)
b) East Coast Rivers of Andhra Pradesh	20	(A)
c) East Coast Rivers of Tamil Nadu	17	(C)

Under West Coast Rivers Zone there will be :

a) West Coast Rivers of Kerala	20	(K)
b) West Coast Rivers of Karnataka and Maharashtra (upto Thane)	26	(W)
c) West Coast Rivers of Gujarat	26	(G)

Thus, in fact the independent rivers of the country are grouped in 12 Zones / Basins. This is done in such a way that in each group not more than 34 independent rivers shall fall. This is fixed from a consideration that to contain the rivers in one column space, the total number of rivers in one zone should be less than the number of alphabets i.e. 25 (except vowel 'O' which is being used to denote a blank column by 'Zero') and first 9 one digit natural numbers taken together.

Since the Ganga has tributaries of significant size upto 4th and 5th order, to accommodate rivers in 7 digit coding system, the Ganga river is broken into 3 parts viz. the Yamuna, the Upper Ganga upto Yamuna confluence (Allahabad) and the lower Ganga (below Yamuna). Thus, each of these rivers will be deemed to be independent rivers for purposes of coding. In some cases the main river may still have 4th order tributary which may not get accommodated in 7 digit coding system, for example, the Gambhiri river is the 4th order tributary of Yamuna (Yamuna-Chambal-Banas-Bearch-Gambhiri). In such cases, it is proposed to assume such river to be only 3rd order tributary and deal it accordingly for coding (thus the Bearch and Gambhiri are both to be treated as sub-tributaries of Banas for coding purposes).

For coding purposes alphanumeric code has been adopted as below :-

i) First Col. is given for a Zone with first alphabet of the main river or of a State as a code. For example, Indus (I), Ganga (G), etc.

ii) Second Col. is allotted for main/independent river with starting alphabet as a code. Here first alphabet of the name of the river is proposed to be used as a code unless there are number of rivers in one group with names starting with same alphabet. In such cases, the most important river is to be assigned its first alphabet as a code while for all other repeating rivers, alphabets which have not been used in the group shall be assigned serially in clockwise direction.

After detailed working, if number of rivers exceeds 25 and go beyond A to Z coding, 9 further rivers could be assigned one digit each from 1 to 9 in continuation.

iii) The Third Col. space is provided for the first order tributaries with alphanumeric coding arrangement as for the main river. Thus in all 34 first order tributaries can be accommodated for every main river.

iv) Next 2 spaces shall be filled with one digit numerals from 1 to 9 for second order tributary (sub-tributary) and third order tributary (sub-sub-tributary). Thus for second order and third order tributaries one space each shall be reserved to accommodate upto 9 tributaries for each parent river.

v) All tributary rivers shall be accommodated serially starting from mouth of the main/parent river upstream. Thus each river gets coded with 5 digit system.

vi) At the end for station code on a particular river, 2 spaces shall be allotted with alphanumeric code. Starting from the mouth of the river upstream, the river will be divided into 25 equal segments. For each segment, one alphabet (except vowel 'O') shall be reserved serially. Each segment shall then be divided into 9 equal sub-segments, if considered necessary, to assign 1 to 9 one digit number. Thus, a station in the vicinity of the confluence will have code A1 whereas the station located near the origin, if such a station exists, will have code Z9. It means that on every river, 225 slots shall be reserved to assign unique code number to any closed, existing or proposed hydrological station. The complete station code number will thus consist of seven spaces, first five to identify river and last two spaces to indicate location of the station.

C. BASIN WISE DETAILS OF HYDROLOGICAL OBSERVATION STATIONS

H.No.	Particulars	GD	GDS	Total	WQ
