प्रस्तावना

जल जीवन का सबसे आवश्यक घटक है और जीविका के लिए महत्वपूर्ण है। जल बनस्पति एवम् प्राणियों के जीवन का आधार है उसी से हम मनुष्यों, पशुओं एवम् वृक्षों को जीवन मिलता है। यूं तो सम्पूर्ण पृथ्वी में 75% पानी है किन्तु पीने योग्य जल मात्र 1% ही है इसलिए जल का विशेष महत्व है। भारतीय पुराण विश्व के प्राचीनतम विश्वकोष हैं, जो पारम्परिक जल संचयन और वृक्षारोपण के महत्व पर प्रकाश डालते हैं। पुराणों में कहा गया है कि कूप, कुण्ड, सरोवर, तालतलैया-, वापी, झील, नदी आदि जल के संचित भण्डार सदैव भरें रहने चाहिए। देवी पुराण के अनुसार जो लोग जल संचयन के लिए तालाब, जलाशय आदि का निर्माण करते हैं, वे पुण्य के भागी होते हैं। ग्रीष्म में जो सरोवर सदानीरा रहते हैं उन सरोवरों के निर्माता स्वर्ग का अक्षय सुख भोगते हैं। धार्मिक भावना के कारण सेठ, महाजन, रजवाड़ आदि जल संचयन योजना के अन्तर्गत जलाशय, कूर्पों आदि का निर्माण करते थे। इस अभियान के चलते हमारा देश सरोवरों, कूर्पों, कुण्डों आदि से भरा था। इन जलाशयों से खेतों की सिंचाई होती थी। जल संचयन के इस विकास में पुराणों की प्रेरणा थी। रामायण काल में अनेक प्राकृतिक जल संचयन के रूप में पुष्कर होते थे, जिसे ग्रामीण पोखर कहते थे। पुराणों में सप्त सरोवरों की चर्चा है।

प्राचीन काल में नगर नदियों के किनारे बसते थे ताकि जल की असुविधा न हो। जल को देवत्व प्राप्त था। जल का एक पर्याय अमृत भी है। प्राणी और प्रकृति का जीवन जल है। धार्मिक संस्कारों में जल को अधिक महत्व दिया जाता है। देवाभिषेक, शुद्धीकरण, आचमन और अर्चन में जल की अनिवार्यता बनी रहती है। शरीर की पवित्रता के लिए जलमार्जन के समय यह मंत्र पढ़ा जाता - है।

"अपवित्रः पवित्रो वा सर्वावस्थं गतोऽपि वा"

राष्ट्रीय जल नीति में जल संसाधन से संबंधित आंकड़ों के एकत्रीकरण एवं उनकी उपलब्धता हेतु सूचना केंद्र के मानकीकरण एवं आधुनिकीकरण पर जोर दिया गया है ताकि इस कार्य में संलग्न केंद्र सरकार एवं राज्य सरकार के विभिन्न विभागों को उच्च स्तरीय आंकड़े सुगमता से उपलब्ध हो सकें।

केन्द्रीय जल आयोग जल संसाधनों के विकास में संलग्न भारत सरकार, जल संसाधन, नदी विकास और गंगा संरक्षण मंत्रालय के अंतर्गत देश की एक शीर्षस्थ तकनीकी संस्था है, इस

संस्था द्वारा जल विज्ञानीय आंकड़ों के एकत्रण से लेकर परियोजनाओं के मूल्यांकन, अभिकल्पन, प्रबोधन तथा परिचालन से संबंधित कार्य किये जा रहे हैं। नर्मदा एवं उसकी सहायक नदियों पर 16 स्थलों पर नर्मदा बेसिन संगठन के अंतर्गत नर्मदा मंडल, भोपाल द्वारा एवं नर्मदा के 2 स्थलों पर, नर्मदा एवं तापी बेसिन संगठन के तापी मंडल, सूरत द्वारा जल विज्ञानीय आंकड़े एकत्रित किये जाते हैं, जिनका संकलन इस पुस्तिका में किया गया है। इन आंकड़ों के अतिरिक्त मध्यप्रदेश के जल संसाधन विभाग के अंतर्गत नर्मदा नदी पर स्थित बिजौरा स्थल के आंकड़ों को संकलित कर कुल 19 जल विज्ञानीय स्थलों के आंकड़े इस पुस्तिका में संकलित किये गये हैं।

इस पुस्तिका के आंकड़ों को SWDES व HYMOS साफ्टवेयर में संकलित व परिष्कृत कर विभिन्न तकनीकी माध्यमों से प्रदर्शित किया गया है।

इस पुस्तक की समस्त जानकारी के एकत्रण, संकलन, विश्लेषण एवं संपादन से सम्बद्ध केन्द्रीय जल आयोग के अधिकारियों एवं कर्मचारियों का अथक परिश्रम एवं समर्पण सराहनीय है। मैं केन्द्र एवं राज्य सरकार के विभिन्न विभाग, केन्द्रीय भू जल बोर्ड, केन्द्रीय प्रदूषण नियंत्रण बोर्ड, जनगणना विभाग, नर्मदा घाटी विकास प्राधिकरण, नर्मदा जल विध्युत विकास निगम लिमिटेड तथा पर्यावरण प्रदूषण नियंत्रण संगठन आदि के साथ, उन सभी का आभारी हूं, जिन्होंने इस पुस्तक से संबंधित विविध जानकारियां उपलब्ध कराने तथा प्रकाशन में सहयोग एवं सहायता दी।

(राकेश टोपेजा)

1 Introduction

1.1 General

Central Water Commission (CWC) is conducting hydrological observations on major river basins under National Network which was initially started under 80 Key Stations, 163 Key Stations and Flood Forecasting schemes. Presently hydrological sites are operated under Plan & Non Plan schemes named "*Development of Water Resources Information Systems*" and "*Flood Forecasting*" of Central Water Commission. This Water Year Book presents data of 19 hydrological observation stations for the year 2015-16 in Narmada basin. The data of 19 hydrological observation sites, which is presented in this publication, have been collected by Narmada Division, Bhopal & Tapi Division, Surat of CWC. Out of 19 sites in Narmada Basin, 02 sites viz., Orsang at Chandwada and Narmada at Garudeshwar are being maintained by Tapi Division, Surat; 01 site named Narmada at Bijora is being maintained by WRD, Govt of Madhya Pradesh; while the remaining 16 sites are being maintained by Narmada Division, Bhopal. Jurisdiction of Narmada Division is as given in Figure 2-3.

State Government Sites in Madhya Pradesh are operated by the Director (Hydromet), WRD, Bhopal. The data of one site i.e. Narmada at Bijora have been obtained from the State Government and included in the Water Year Book.

The classification and scheme wise distribution of hydrological observation stations is presented in Table 1-1 and Table 2-1 respectively.

The river basin description is given in Section-2

1.2 Organisation of the Water Year Book

The Water Year Book gives detailed description of river basin, its river system, climatic characteristics, geology along with methodology of stream flow data collection, its availability and hydrological data observed at various stations during the year. The station wise data sheet presents various parameters like monthly flow summary, 10-daily as well as monthly mean flows besides peak flow results. The analysed data has also been presented in form of charts and maps.

The Year Book runs under four sections as given below.

Section-1: Introduction

Section-2: Basin Description

Section-3: Stream Flow Data

Section-4: Hydrological Data

2 Narmada Basin Description

2.1 Geographical Description of Narmada Basin

The Narmada is the largest West flowing and fifth largest river of India. It drains a large area in Madhya Pradesh besides some area in the states of Maharashtra and Gujarat. The Narmada basin lies between East Longitudes $72^{\circ} 32'$ to $81^{\circ} 45'$ and North Latitudes $21^{\circ} 20'$ to $23^{\circ} 45'$. It flows through Deccan trap in between Vindhya and Satpura ranges of hills before falling into the Gulf of Cambay in the Arabian Sea.

The Narmada drains an area of 98796 sq km. out of which nearly 87% lies in Madhya Pradesh. The statewise distribution of drainage area is shown in **Table 2-1**.

Table 2-1 Statewise Distribution of Drainage Area

Sl. No.	Name of State	Drainage Area (sq km)	Percentage
1.	Madhya Pradesh	85859	86.9
2.	Maharashtra	1538	1.5
3.	Gujarat	11399	11.6
	Total	98796	100

The details of CWC hydrological observation stations are given in Table 2-2. Further, there are 31 gauge/gauge and discharge sites being maintained by State Government of Madhya Pradesh and 12 gauge/gauge and discharge sites being maintained by State Government of Gujarat in Narmada basin. The details of the sites maintained by the State Government of Madhya Pradesh are given in Table 2-3. The line diagram of Narmada basin showing the observation stations is given in Figure 2-1.

2.2 Description of the River System

The Narmada originates from a Kund (spring) at an elevation of 1057m at Amarkantak in the Maikal hill in Shahdol district of Madhya Pradesh and flows through Madhya Pradesh, Maharashtra and Gujarat between Vindhya and Satpura hill ranges before falling into the Gulf of Cambay in the Arabian Sea, about 10 km north of Bharuch, Gujarat. The total length of this west flowing river from its origin to its outfall into the Arabian Sea is 1312 km. For the first 1079 km it flows in Madhya Pradesh and thereafter forms the common boundary between Madhya Pradesh and Maharashtra for 35 km, and Maharashtra and Gujarat for 39 km. In Gujarat State it stretches for 159 km.

There are 41 important tributaries to the Narmada river. Significant among them are Burhner, Banjar, Hiran, Tawa, Chhota Tawa, Orsang and Kundi which are major tributaries having catchment area more than 3500 sq km. The remaining tributaries are having catchment area ranging from 500 to 2500 sq km. The catchment area, length and elevation of the origin of the important tributaries are indicated in Table 2-4.

2.3 Climate Characteristics

2.3.1 Temperature

Temperature of Narmada Basin varies like any other part of Central India. The difference between the maximum & minimum temperature, in any part of the basin, is quite pronounced. The temperature is maximum in the month of May and minimum in the month of January. In general, the upper Narmada Basin records lower temperature as compared to middle basin. In lower section of the basin, the influence of the sea is prominent, and temperature though lower than the middle basin, is still higher than the upper reaches of Narmada River. The temperature profile in the basin is given in the Figure 2-4 and Table 2-5.

Table 2-5 Temperature Data of Narmada Basin

2.3.2 Rainfall

The Inter-departmental Committee on Soil Conservation and Afforestation of Sardar Sarovar & Narmada Sagar projects constituted by the Ministry of Agriculture and Rural Development, Government of India had compiled annual & seasonal rain fall data of the Narmada basin between 1901-1950 which is presented in Table 2-6.

Above data suggests that a major portion of the precipitation in the basin takes place during the southwest monsoon, and accounts for about 85% to 95% of the total precipitation. The post monsoon accounts for about 9% of the precipitation whereas the winter and the pre-monsoon, together account for about a maximum of 10% of the total precipitation.

Table 2-6 Rainfall in Districts of Narmada Basin (Average for the period 1901-1950)

Sl. No.	District	Seasonal Average Rainfall(mm)				Total
		Winter Monsoon (Jan-Feb)	Pre-Monsoon (March-May)	South-West Monsoon (June-Sept)	Post Monsoon (Oct-Dec)	
1	Shahdol	76 (5.4)	58 (4.1)	1184 (84.7)	79 (5.6)	1397
2	Mandla	53 (3.4)	58 (3.7)	1163 (86.8)	86 (5.5)	1570

Source: Website of Indian Meteorological Department (District rainfall for five years -Hydromet Division)

From the above Table 2-6 and Table2-7 it can be observed that the pattern of the precipitation in the basin is almost similar to the past pattern, major portion of the rainfall being taking place during the southwest monsoon. The post monsoon and pre-monsoon account for small parts of the precipitation whereas the winter monsoon has still lesser or no contribution towards the total precipitation. The average rainfall in the basin during the last five years has decreased at some places (the maximum decrease being about 35% for Shahdol district) while it has increased at other places (the maximum increase being about 391% for Indore district) as compared to the average past rainfall for the period of 1901-1950. This change in average rainfall may be due to climate change and human activities (like land use change).

Figure 2-5 gives the isohyets map of the Narmada Basin. The rainfall is higher in the upper and lower basin, but marginally less in the lower middle and middle basin. The general pattern of the basin is that the rainfall increases from west to east.

From the data of fifty years on intensity of rainfall during a 24 hours period as compiled by the Central Water Commission, it can be concluded that the most intense rain occurs in the southern section of the upper Narmada basin, where 24-hour rainfall is about 360 mm. The least intense rainfall is between Jhabua & Dhar where the 24 hours rainfall is less 260 mm. Details are shown in Figure 2-6.

2.3.3 Wind

The wind speed data of the basin is given in Table 2-8. The average monthly wind speed in the Narmada Basin varies between about 1.4 km/h and 16 km/h in the post - monsoon & pre monsoon seasons, the wind speed is generally higher. The maximum percentage of calm occurs between October & December. The predominant wind direction is NW followed by SW and W.

2.3.4 Evaporation

The process of evaporation depends upon wind velocity, altitude, temperature and humidity. In summer, evaporation loss in the upper Zone of Narmada is between 6.0-10.0 mm/d. In Jabalpur region monitored at Jamtara, evaporation loss is considerably less i.e. between 4.0-7.0 mm/d. It is due to increase of humidity level by nearby Bargi Reservoir. Evaporation loss immediately increases at Barmanghat (Narsinghpur region) where it is between 6.0-12.0 mm/d. In middle zone monitored at Hoshangabad, evaporation loss is also less and is between 4.0-7.0 mm/d. Tawa reservoir and Barna dam are nearer to this place. Evaporation loss is more in lower Zone of Narmada monitored at Rajghat near Barwani. It is between 12.0-28.0 mm/d. In winter, evaporation loss is less in upper and middle Zone of Narmada and is between 1.0-3.0 mm/d. In lower Zone, evaporation loss is between 6.0-9.0 mm/d in winter season.

2.3.5 Humidity

The relative humidity in basin varies between 92% and 27% in the morning and between 88% and 15% in evening, depending upon the season. The relative humidity is naturally maximum during the monsoon months and is around 80% to 90%. In the winter months of December and January, the relative humidity comes down to around 30%. The variation in relative humidity between upper, middle and lower sections of the basin is not very pronounced. The relative humidity at various IMD station representative of the Narmada Basin is given in **Table 2-9**.

2.4 Geology

About 270 million years ago, the continents existed in two large masses and India was a part of the southern continental mass commonly known as Gondwana Land. Between the two continents, a large sea, Tethys existed. Presently the Himalayas and the Tibetan Plateau have taken the position of the ancient Tethyan Sea. The Gondwana Land was intruded by few large marine transgressions. A deep gulf or sea existed along the Sindh-Beluchisthan and the Kutchh. At one time, a marine ravine penetrated the very centre of Peninsular India through a narrow inlet along the present valley of Narmada. During this time India was divided into two halves by narrow strips of marine transgressions and there was no land communication between the Peninsular and northern India.

Along the Narmada Valley, several patches of sediments have been deposited which contains ancient remains of animals. These fossils are similar to those found along the tracts of Tapi river. Such similarity probably suggests that even about 3 million years ago, Narmada and Tapi were confluent and the separate fate of these two rivers was decided by recent earth movements. The Bheraghat falls of Narmada, near Jabalpur, was probably created during one such movement which appears to be a recent one.

The geological sequence in the basin is presented in **Table 2-10**. The Archaean group of rocks in the Narmada basin is represented by the Chilpighat series. These rocks wedge in at the eastern end between the Vindhyan and granitic gneisses and expand in the Narmada valley in strips. The Dharwadian rocks consisting mainly of quartzites, feldspar grits, shales and slates with intercalated traps occur in Balaghat, Chhindwara, Jabalpur districts of Narmada valley. In Jabalpur area, the series is distinguished by perfectly crystalline dolomitic limestone. The famous "marble rocks" of Jabalpur belong to this series.

Table 2-10 Geological Sequence in Narmada Basin

Major Groups	Dominant Rocks	Age in Million Years.
Recent Alluvium	Alluvium	2-3
Deccan trap	Basalt	60-135
Lametas	Limestone, Sandstone	135-150
Gondwanas	Sandstone, Volcanics	150-400
Vindhyanas	Sandstone, Shales	600-4500
Bijawars	Quartzites, Sandstone	600-4500
Archaeans	Quartzites, Shales, Slates	600-4500

On the upturned edges of the Archaeans, the Cuddapahs were deposited and the Narmada Valley is represented by Bijawars. The Bijawars occur in series of out crops extending from Bundelkhand to the south of Narmada and has thickness of less than 240m at some places. These rocks are generally characterised by quartzites, sandstones and sometimes conglomerates. Bijawars are found in Dhar and Jabalpur

districts. In Jabalpur, however, Bijawars are represented by somewhat different rock assemblages like phyllites, mica, schists, calcitic and dolomitic marbles. There is, however, some controversy over the age of the rocks and some geologists feel that they are older than Cuddapahs and should be classified along with upper Archaeans i.e. Dharwadian rocks.

The Cuddapahs were succeeded by rocks of Vindhyan system after a time interval marked by earth movement and erosion. The Vindhyan rock characterised by Bhander Sandstones, shales, limestones and Ganurgarh shales are exposed in the north of Hoshangabad town and extends upto Bhopal. Between Dewas and Khandwa in Parnakheri, thick Vindyans are exposed along the banks of Narmada mainly characterised by Bhander group of rocks and unclassified upper Vindhyan.

After the deposition of Vindhyan rocks and their uplift, there was a great hiatus in the stratigraphical history of the peninsula. At the end of Palaeozoic era, a series of changes took place which were also responsible for the mountain building movements called the Herayan or Variscan orogeny. Due to this movement, the continents separated to the present configuration. The deposits during this period are called Gondwana and is exposed in the south of Hoshangabad. Thick Gondwana sediments are also found near Jabalpur, Rewa, Pachmarhi etc. The Gondwana formation ended in Cretaceous era i.e. about 135 million years ago. The end of cretaceous was marked by enormous lava flows which spread over vast areas of central and eastern India. These lavas of basaltic composition are found in the Khandwa, Khargone, Dhar, Dhule areas till practically up to the lower Narmada region. The interesting geological episode in the Narmada valley are the Lameta beds, which occur in Lameta ghats near Jabalpur. The Lameta beds represents the fluvial or estuarine deposits just below the trap basalts. The mouth of the Narmada witnesses thick sedimentary deposits of recent age. These sediments are often saline but otherwise supports bumper crops.

2.5 Soils

Although no detailed soil survey has been carried out in the basin, periodically some soil surveys have been carried out in different parts of the basin under different schemes and for different purposes. In 1950, the Central Water Commission conducted soil surveys in the command areas of various projects and produced some maps on a 1:2,50,000 scale. Some of the projects covered are given in **Table 2-11**.

Table 2-11 Soil Surveys carried out by the Central Water Commission in Various Projects in Narmada Basin

S.No.	Project	Districts	Area in lakh ha.
1	Tawa	Hoshangabad	3.70
2	Bargi	Jabalpur, Narsinghpur	3.60
3	Kolar	Sehore	0.75
4	Punasa	Khandwa, Khargone	0.60
5	Barwah	Khargone, Dhar	1.60

As per the demand of Narmada Water Disputes Tribunal, a reconnaissance survey of the Narmada Sagar command area was taken up in 1975. Nearly 256 soil profiles were studied. Again during 1982-83, an area of about 2.8 lakh ha, falling within the Khandwa and Khargone districts, was surveyed by the department of Agriculture, MP to appraise the land irrigability in connection with project. Aerial photo surveys were carried out, and 366 profiles and 2,780 auger bores were examined.

The soil map of the area is given in **Figure 2-7**. In the upper basin, the majority of the soil are characterised by shallow black soils. These soils are erosional products of trap basalts. The black soils are rich in smectite clays having a high water holding capacity. These clay lattices expand when they absorb water and thus reduce the water drainage. The organic matter is generally less than 5% in black soils. The black soil in the upper basin is generally in-situ kor colloidal. These soils are often inter spread with red sandy or laterite soils. The profile is generally shallow and mainly covers the hilltops and plateau regions. The red soils are the result of intense chemical leaching of basalts whereby all the minerals in the rock are leached out except the oxides of silica, iron and aluminium. Due to intense leaching, these soils have a reasonably good drainage but lacking in nutrients essential for plant growth.

The soils in the Vindhyan and Satpura plateau region of the middle basin range from shallow black soils to medium black soils. Around Hoshangabad, recent alluviums with varied thickness can be witnessed. These soils are extremely fertile and supports cotton, Jawar and wheat.

In the lower part of the basin, the major soils of the valley and southern plateau are medium deep black soils. On the other hand mixed red and black soils occur in the northern plateau. In the mouth of the Narmada, Pliocene rocks along with recent alluviums are seen. These alluvial soils are mostly sandy loams with good drainage. They are extremely fertile and support good crops.

2.6 Minerals

The minerals found in the basin are bauxite, clay, coal, dolomite, graphite, iron ore, manganese, talc, limestone etc. The mineral map of Narmada Basin is given in **Figure 2-8**.

2.7 Ground Water

The occurrence of ground water generally depends upon the rainfall, drainage, topography and the geological conditions of the area. The ground water in upper, middle and lower basin occurs in distinct horizons with characteristic aquifers.

In the upper basin, the geological formation is mainly the older rocks belonging to the Archaeans and Vindhyan and are characterised by good water potential. The ground water within part of the basin occurs mainly in the weathered zones of the rocks. The quality and quantity of the ground water is reasonably good.

In the middle part of the basin where Gondwana rocks are predominant, the ground water occurs in varied quantities in the pores of sandstones. The occurrence mainly depends on the grain size of the rocks. In the coarse grained rocks, the ground water availability is substantial. However, in the sections of the basin where the trap rocks are exposed, the ground water conditions are rather erratic. In the trap basalts, ground water occurs in patchy aquifers and often these aquifers are not interconnected.

A significant part of the lower basin is occupied by trap basalts where the ground water occurs in patchy aquifers. However, near the mouth of the river, the coastal alluvials are predominant. The coastal alluvials contain highly permeable aquifers with good quantities of water. Their yield is generally excellent, with good recharge characteristics. The ground water in this area occurs mainly in unconfined aquifers with varying depths. However, ground water in alluvials is susceptible to seasonal water table fluctuations. In thickly populated areas, these aquifers are often contaminated.

Table 2-12 gives the ground water recharge and draft characteristics. The data suggests that the average ground water utilisation in the Narmada basin is about 45%. The draft in Sehore, Khandwa, Damoh, Dhar, Dewas, Raisen, Sagar, and Khargone is above 50%. In fact, these districts account for major ground water draft in the basin. In the rest of the area, the ground water remains under-utilised, and there is scope for further ground water development.

Table 2-12 Ground Water Recharge and Draft Characteristics in the Districts of Narmada Basin

Sl. No.	District	Net Ground Water availability (ham)	Total Annual Ground Water Draft (ham)	Net Ground Water availability for Future Irrigation (ham)

2.8 Description of Water Storage / Diversion Projects

A Master Plan of the Narmada basin has been prepared for the development of water resources of the Narmada basin. The Master Plan envisages the construction of 30 major dams, 135 medium dams and 3000 minor dams to irrigate about 46.3 lakh ha of land in Madhya Pradesh (27.55 lakh ha), Gujarat (18 lakh ha), and Rajasthan (0.75 lakh ha). The major and important medium projects are listed in **Table 2-13** and **Table 2-14** respectively. **Figure 2-2** gives location of important projects along with their utilisation (withdrawals).

At present, there are four major hydroelectric cum irrigation project namely *Bargi*, *Indira Sagar*, *Omkareswar* & *Sardar Sarovar* Projects on main Narmada river which are almost completed and eight completed projects on different tributaries namely Matiyari, Barna, Tawa, Kolar, Sukta, Man, Jobat and Karjan. The salient features of these projects are given below:

PROJECTS ON MAIN RIVER

Rani Awanti Bai Sagar Project (Bargi): This project is located on the main river Narmada near Jabalpur. The project was constructed at a cost of Rs 98,361 lakh. It is a multipurpose project. The total catchment area of the project is 14,556 Sq km. The gross and dead storage of the reservoir is 3920 hm³ and 740 hm³ respectively. The 135.00 km length of left bank canal of this project irrigate 1.92 lakh ha. This project has 2 units of 45 MW each on its left bank and other 2 units of 7.5 MW each on right bank. The project was initially started during the year 1985 and Head Works were completed in the year 1987.

Indira Sagar Project: The Indira Sagar Project is a multipurpose river valley project across river Narmada in Khandwa Distt. of Madhya Pradesh at a distance of 200 km from Bhopal. It has a CCA of 1,69,000 ha at 138% intensity on the left bank of Narmada river and generate 1000 MW of hydropower. The project also envisage supply of 74 MCM of drinking water to rural areas. The revised cost of the project at 1998 price level is Rs. 5150 crores.

Omkareswar Project: The Omkareshwar multipurpose project is constructed across river Narmada near village Mandhata of Khandwa distt. in Madhya Pradesh. The dam site is located at a distance of 77 km from Indore. The project envisage construction of 73 m high concrete dam with a gated spillway to irrigate 1,46,800 ha CCA and to generate 520 MW power. The estimated cost of project is Rs. 1846.77 crores as in 2001.

Sardar Sarovar Project: The Sardar Sarovar dam is constructed across river Narmada and is located at 170 km U/S from Gulf of Khambat in Gujarat State. It is 1210 m long and 129.5 m high dam from river bed level. SSP proposes to irrigate a command area of 1.8 million ha of Gujarat and Rajasthan States and have an installed power generation capacity of 1450 MW. The project also provide the domestic water supply to 2.35 million people of Gujarat state. Almost 90% of the work at dam site has been completed. The revised estimated cost for the project was Rs. 39240.44 crores as in 2008-09 P.L.

Table 2-13 Major Projects (Completed, On-going & Proposed) in Narmada Basin

Sl. No	Name of Project	River	Status	Capacity Gross/ Live (hm ³)	Utilisation (hm ³)
1	Karjan	Karjan	Completed	630	NA
2	Sardar Sarovar	Narmada	Completed *		7475.4
3	Jobat	Hathni	Completed *	77.84/70.04	47.77
4	Lower Goi	Goi	Ongoing	-	-

PROJECTS ON TRIBUTARIES

Matiyari Project: This project is located on river Matiyari, a sub-tributary of Narmada near village Simariya in Mandla District. The project is constructed at a cost of Rs. 1558.40 lakh. It is mainly an irrigation project. The total catchment area of the project is 158.75 sq km. The gross and dead storage of the reservoir is 58.80 hm³ and 5.68 hm³ respectively. About 10120 ha of land is being irrigated through 78 km length of canal.

Barna Project: This project is located on river Barna, a tributary of river Narmada about 20 km from Bareli in Raisen District. The project is constructed at a cost of Rs. 153.7 lakh. It is mainly an irrigation project. The total catchment area of the project is 1,176 sq km. The gross and dead storage of the reservoir are 538.3 hm³ and 83.15 hm³ respectively. About 54,915 ha of land is being irrigated through 39.05 km length of canal. The project was commissioned during 1973.

Tawa Project: This project is located on river Tawa, a tributary of river Narmada, 9 km from Bagra Tawa railway station in Hoshangabad District. The project is constructed at a cost of Rs. 9,142 lakh. It is mainly an irrigation project. The total catchment area of the project is 5,983 km². The gross and dead storage of the reservoir is 2,248.8 hm³ and 255.6 hm³ respectively. About 2.47 lakh ha of land is being irrigated through 187 km length of canal. The project was commissioned during 1977.

Kolar Project: This project is located on river Kolar a tributary of river Narmada near village Lavakhedi (Birpur) about 32 km southwest of Bhopal. The estimated cost of the project is Rs 139.14 Crore as approved by TAC. Catchment area up to the dam site is 508 sq km. GCA, CCA and annual irrigation of the project are 62,752 ha, 45,087 ha and 60,868 ha respectively. In addition to irrigational facilities, the project also provides 56.75 hm³ (34 MGD) drinking water to the Bhopal city. Gross and live storage capacities of the project are 270 hm³ and 265 hm³ respectively.

Sukta Project: This project is located on river Sukta, a tributary of river Narmada near village Khirala about 40 km from Khandwa (in Khandwa District). The project is constructed at a cost of Rs. 1,189.65 lakh. It is mainly irrigation cum domestic water supply project. The total catchment area of the project is 469 sq km. The gross and dead storage of reservoir is 96.85 hm³ and 11.30 hm³ respectively. About 16,599 ha of land is being irrigated through 23.48 km length of canal. The project was commissioned during 1980 and finally completed during 1984.

Man Project: Man Irrigation Project in Dhar Distt. of Madhya Pradesh envisage construction of a composite dam across river Man (a tributary of river Narmada) near village Jeerabad of Gandhwani Tehsil. It is located on Dhar – Manawar state highway at a distance of 60 km from Dhar and 320 km from Bhopal. The project has partially lined canal system taking off from both flanks of the dam to provide irrigation in a CCA of 15,000 ha with annual irrigation of 19,200 ha. The estimated cost of project was 176.75 crores in 2004.

Jobat Project: Jobat irrigation project in Madhya Pradesh envisage construction of a composite dam across river Hathni (a tributary of river Narmada) near village Waskal, 24 km away from Kukshi town and 400 km from Bhopal. A 29.73 km long main canal is proposed with distribution network to provide irrigation to 9,848 ha of CCA on the left bank of river Hathani to benefit 27 villages of Kukshi Tehsil in Dhar Distt. Work pertains to Head works is completed in all respect and at an average 90% work pertains to canal system is also completed.

Karjan Project: This project is located on river Karjan a tributary of river Narmada near village Jitgadh in district Bharuch (Rajpipla narrow gauge Railway station is 10 km from dam site). The project is constructed at a cost of Rs. 13,861.3 lakh. It is a major irrigation project. The catchment area of the project is 1,403.78 sq km. The gross and dead storage of the reservoir is 630.0 hm³ and 49.0 hm³ respectively. About 56,200 ha of land is being irrigated through 63.605 km length of canal. The project was commissioned during June 1987.

Table 2-14 Medium Projects in Narmada Basin (Completed & On-going & Proposed)

3 Stream Flow Data

3.1 Methodology

3.1.1 Gauge Measurement

Water level or stage of river is measured as its elevation above the G.T.S. datum. Water level measurement is conducted by reading non-recording gauges as specified in IS 4080-1967. Series of vertical staff gauges have been fixed at three sections at every site. The gauge posts are generally of wood or concrete with cut and ease water arrangement and fixed securely in vertical position by anchoring them in M-15 concrete base of suitable size. Enamelled vertical gauge plates with metric markings are fixed on the gauge posts so that the gauges can be read up to 0.005 m.

Out of the three gauge lines the Central one is used as Station Gauge line and the readings of other two gauge lines are used for calculation of water surface slope. During non-monsoon season, gauges are read thrice daily (0800, 1300 and 1800 hrs) and during monsoon, gauges are read hourly at the station gauge line.

3.1.2 Discharge Observations

Discharge is observed once a day starting from 0800 hrs at all the sites by area velocity method except on Sundays and holidays. For non-observation days, the discharge values are computed from the Stage and Discharge relation prepared from the observed data for the water year 2015-16.

The stream width is divided into 15 to 25 segments based on the degree of accuracy as outlined in IS 1192-1981. The width of the river is measured by steel tape/ metallic tape or wire/nylon rope stretched across the river with markings indicated there on, when the river width and depth permitted wading. For large width and deep flow conditions segmentation is done using simple trigonometric method for which pivot point and segment blocks have been constructed at each site.

The depth is measured by using sounding rod 3 to 6 metre long adopting specifications given in IS 3912-1966. When the river flow is very deep and swift, lead lines/ echo sounders are used. Necessary Airline correction and Wet line corrections are made to the sounding observation as provided in IS 1192-1981. The velocity is measured as per IS 3918-1966 by using a cup type current meter conforming to specifications given in IS 3910-1966. The current meter is lowered at the requisite depth (0.6d) vertically at every segment by suspension arrangement as specified in IS 6064-1971. In high velocities, boats fitted with power engines or motor launches are used. Drift is measured and correction for the same is made. Where observations by boat or launch are not possible, measurement of velocity is conducted from bridge or cableway.

When the above procedures are not possible then velocity is measured by float observations. The observations are recorded in a standard format for calculation of total river flow.

3.2 Data Availability

Data availability at various sites in Narmada basin is given in **Table 3-1**.

Table 3-1 Data Availability at CWC Sites

3.2.1 Explanatory Notes

The explanatory notes given here under are designed to assist in the interpretation of hydrological parameters contained in the data presented. The notes are therefore applicable in so far as the data presented in this book.

1. Water year covers the period from June 1st of one calendar year to May 31st of the next calendar year and covers one complete hydrological cycle.
2. Discharge is given in cubic metre per second.
3. Discharges given are actual observed/computed discharges.
4. The zero of gauge is datum level/R.L. fixed for a given site, which is kept 1 m or 2 m lower than the lowest water level recorded in a perennial stream. In a non-perennial stream it is kept 1 or 2 m lower than the lowest bed level of the stream.
5. Maximum and minimum discharges are taken from the daily observed flows.
6. Runoff in "mm" is the notional depth of water in millimetres over the catchment area equivalent to annual runoff calculated at the discharge measurement station. It is computed using the relation.

$$\text{Runoff (mm)} = \frac{\text{Annual flow (hm}^3\text{)}}{\text{Catchment area (km}^2\text{)}} \times 100$$

7. Peak and lowest flow correspond to the highest and lowest water levels recorded during the period of record.
8. Measuring authority refers to the field Division responsible for the operation of the gauging station.
9. The gauging station code number is a unique nine column numeric reference number which facilitates storage and retrieval of flow data in data banks. The first two columns are identifier of measuring authority. Third and fourth columns are for zone/basin. Fifth and sixth columns are for independent river and last three i.e. seventh, eighth and ninth columns are for station numbers.
10. The month and the year from which data are available in the data bank is indicated in **Table 3-1**.

3.2.2 Method of Presentation

The data presented in this book are processed discharge data obtained from application of SWDES / HYMOS software.

In the following pages, station wise hydrological data are presented comprising history sheet, daily flow table and pictorial summary. The sequence of hydrological stations is arranged from its origin to its outfall giving inter-priority to an intermediate tributary station in a similar fashion.

History sheets give concise description of the hydrological station. The flow tables present daily observed flows together with 10 daily, monthly and annual summaries. The pictorial summary shows monthly hydrograph of the current year for each individual gauging station which is superimposed on the corresponding maximum, minimum and mean values for the period of record i.e. up to the previous year. Thus maximum represents monthly maximum average discharge, minimum represents monthly minimum average discharge and mean represents mean of the 10 daily average discharges for the period of past record. The period of data considered is from inception of the site to the previous water year. Flow below 0.1 cumec is not represented in the pictorial summary because log scale has been used for plotting hydrographs.

The hydrological data presented here mainly consists of the following :

- 1 **History sheet:** It mainly consists of some salient features of the particular site as its location ,its drainage area, tributary, opening dates and the maximum and minimum discharge values and their corresponding water levels with the exact dates of their occurrence.
- 2 **Stage discharge curve:** It gives a relationship between the stage of the river at a given time and the coresponding discharge.
- 3 **Stage discharge sheet:** It consists of the stage-discharge data (both observed and that calculated from the stage discharge curve) for all the days of the current water year, peak observed and computed discharge, lowest observed discharge and the total runoff for the current water year.
- 4 **Histogram hydrograph:** It is a discharge –time graph which shows the mean monthly discharge based on the historical data ,mean monthly discharge for the current water year, minimum and maximum discharge base on the historical data.

- 5 **Annual Runoff** : It gives the values of the annual runoff (in MCM) for all the years from the opening of the site upto the current year.
- 6 **Monthly Average Runoff**: This chart shows the monthwise distribution of runoff based on the historical data of the site.
- 7 **Monthly Runoff**: This chart shows the monthwise distribution of runoff for the current water year.
- 8 **Pre-Monsoon & Post-Monsoon X-Section for Water Year** : It gives the pre-monsoon & post-monsoon cross sectional profile of the river ,maximum and minimum water levels occurred during the current year with the date of their occurrence.
- 9 **Water Level vs. Time - Graph** of Highest Flood Peak during the current Year
- 10 **Water Level vs. Time - Graph** of 2nd Highest Flood Peak during the current Year
- 11 **Water Level vs. Time - Graph** of 3rd Highest Flood Peak during the current Year

4 Hydrological Data

In the following pages, station wise hydrological data are presented comprising history sheet, daily flow table and pictorial summary. The sequence of hydrological stations is arranged from its outfall to its origin giving inter-priority to an intermediate tributary station in a similar fashion. Data of following stations are given in the following pages

- **Orsang at Chandwada**
- **Narmada at Garudeshwar**
- **Goi at Pati**
- **Uri at Dhulsar**
- **Narmada at Mandleshwar**
- **Kundi at Kogaon**
- **Narmada at Handia**
- **Ganjal at Chhidgaon**
- **Narmada at Hoshangabad**
- **Narmada at Sandia**
- **Shakkar at Gadarwara**
- **Narmada at Barmanghat**
- **Sher at Belkheri**
- **Hiran at Patan**
- **Banjar at Bamni**
- **Burhner at Mohgaon**
- **Narmada at Manot**
- **Narmada at Dindori**
- **Narmada at Bijora**

Peak Computed Discharge = 1719 cumecs on 16/08/2015 Corres. Water Level :16.4 m

Lowest Computed Discharge = 0.000 cumecs on 03/07/2015 Corres. Water Level :13.65 m

Q: Observed/Computed Discharge in cumecs WL:Corresponding Mean Water Level(M.S.L) in m *:Computed Discharge
#:Discarded Discharge (values changed as per rating curve)
Note:Missing values ignored while arriving at Annual Runoff

Histogram - Hydrograph for Water Year: 2015-2016 (Data considered: 1972-2016)

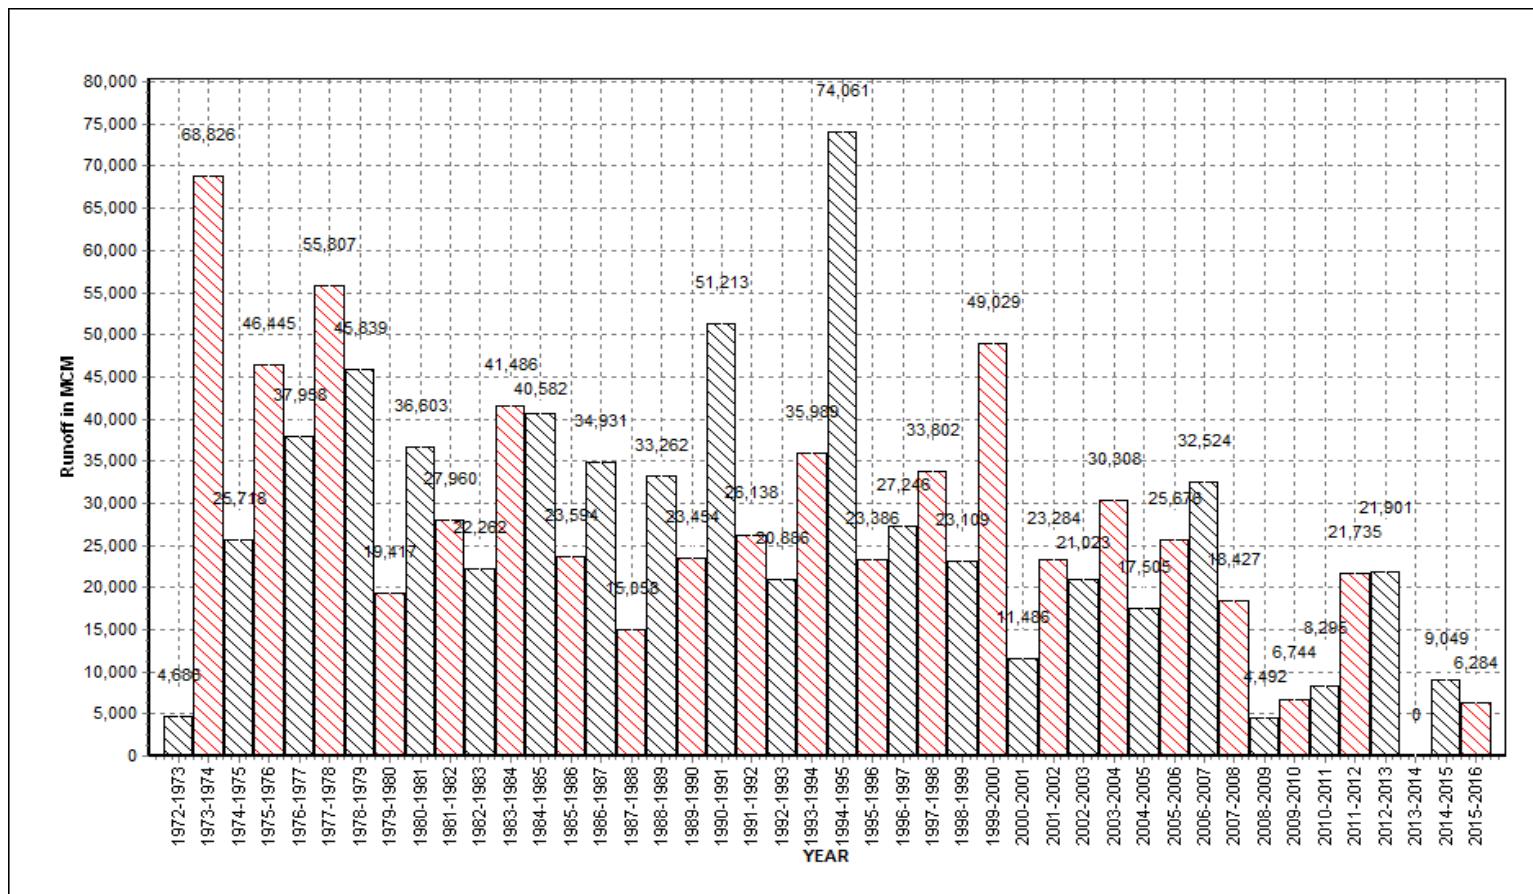

Annual Runoff Values for the period (1972 – 2016)

Station Name: Narmada at Garudeshwar (01 02 15 030)

Division: Tapi Division, Surat

Local River: Narmada

Sub-Division: LNSD, CWC Bharuch

Note: Missing values have not been considered while arriving at Annual Runoff

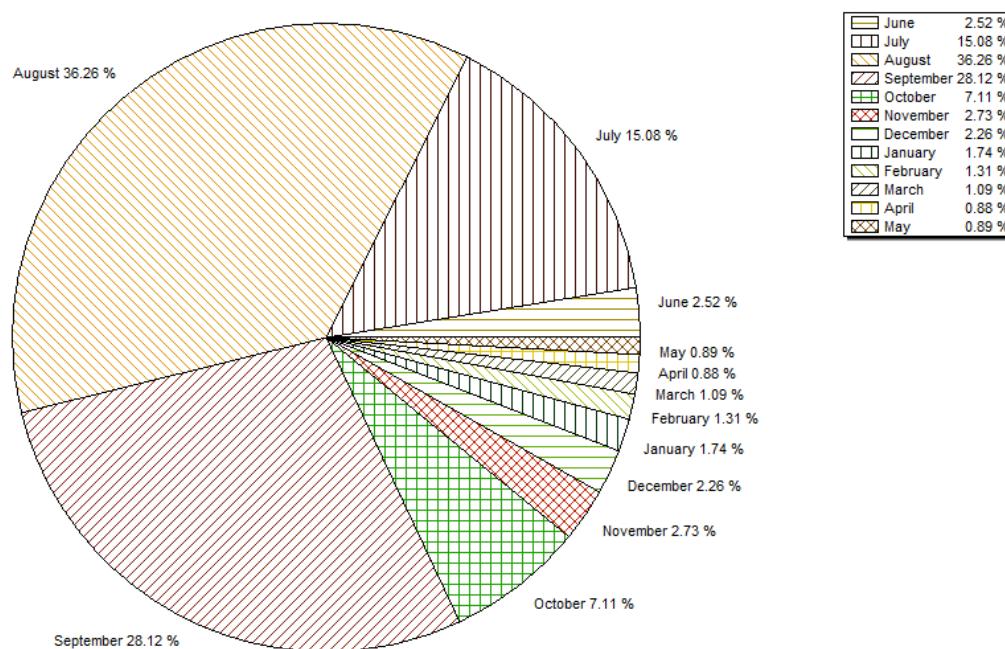

Monthly Average Runoff based on period (1972 – 2016)

Station Name: Narmada at Garudeshwar (01 02 15 030)

Local River: Narmada

Division: Tapi Division, Surat

Sub-Division: LNSD, CWC Bharuch

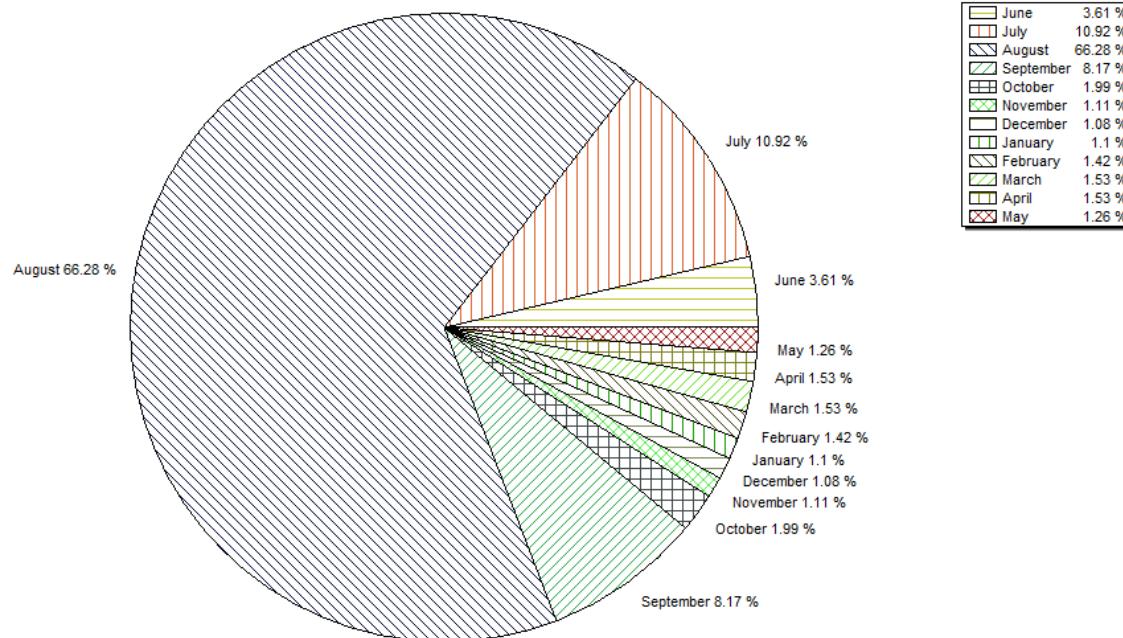

Monthly Runoff for the Year(2015-16)

Station Name : Narmada at Garudeshwar (01 02 15 030)

Local River : Narmada

Division : Tapi Division, Surat

Sub-Division : LNSD, CWC Bharuch

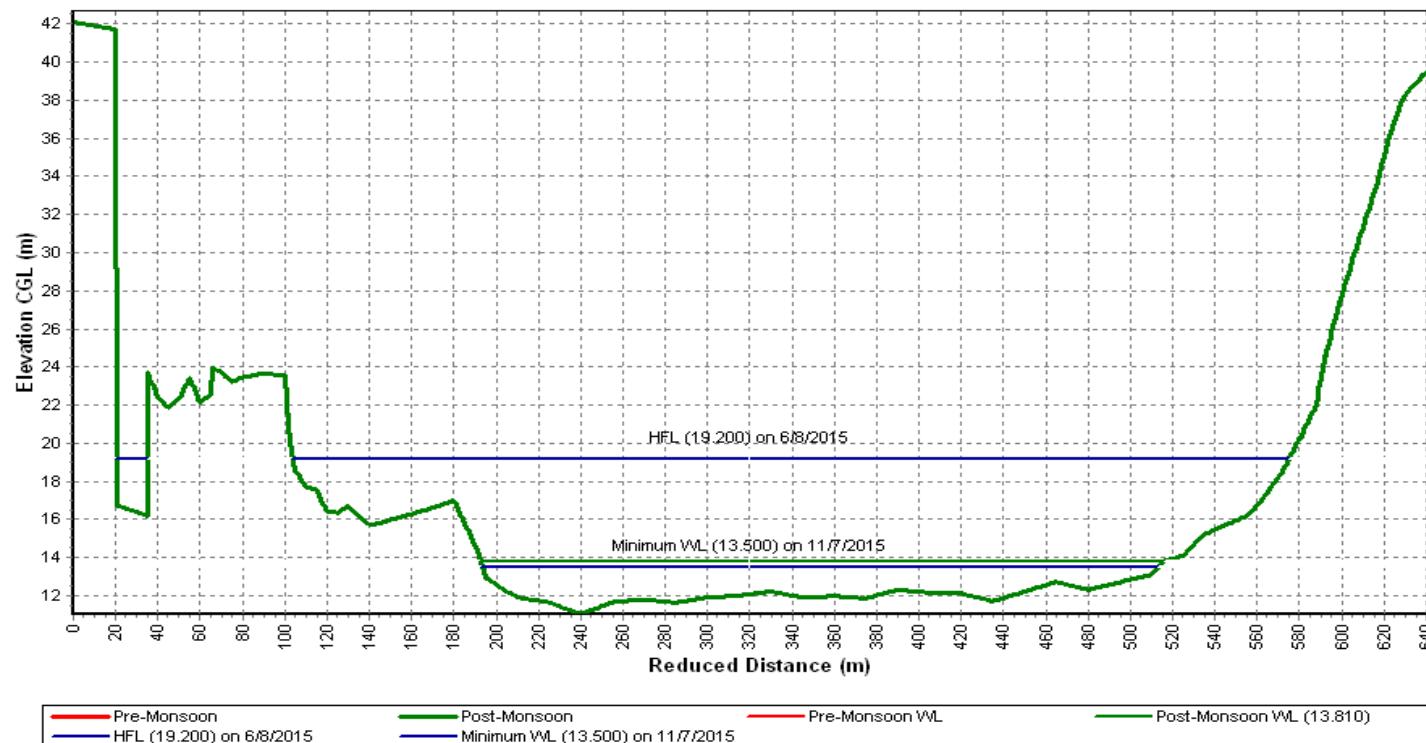

Pre-Monsoon & Post-Monsoon X-Section for Water Year (2015-2016)

Station Name: Narmada at Garudeshwar (01 02 15 030)

Division: Tapi Division, Surat

Local River: Narmada

Sub-Division: LNSD, CWC Bharuch

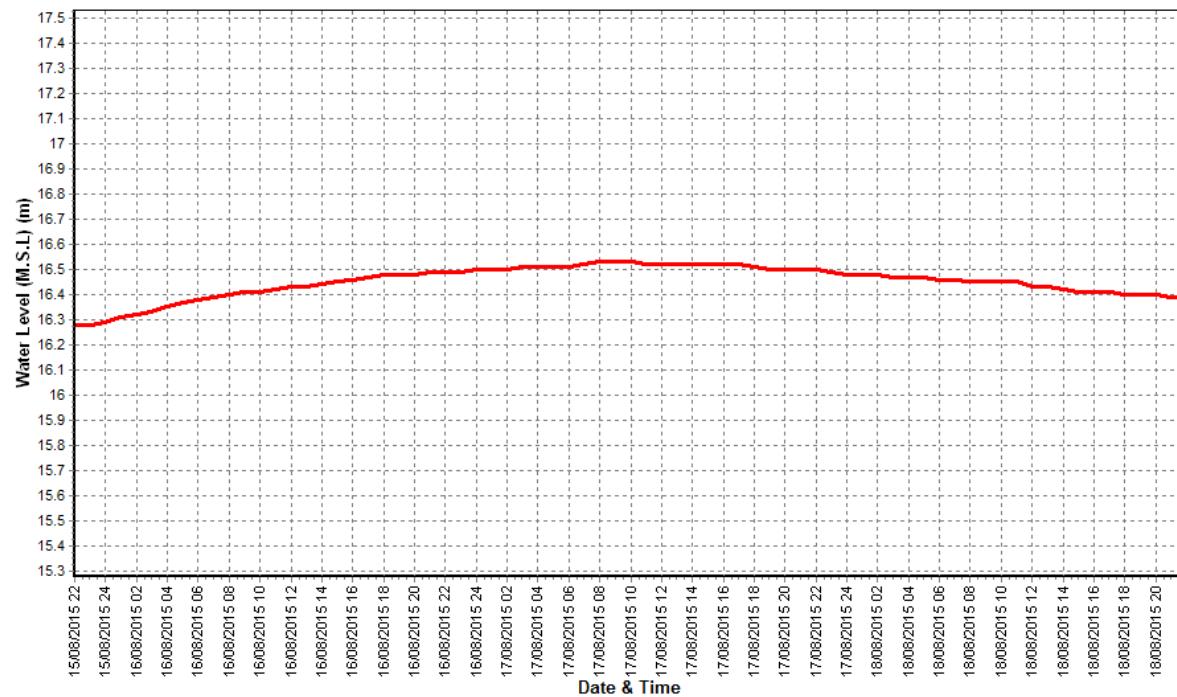

Water Level vs. Time - Graph of Highest Flood Peak during the Year (2015-2016)

Station Name: Narmada at Garudeshwar (01 02 15 030)

Division: Tapi Division, Surat

Local River: Narmada

Sub-Division: LNSD, CWC Bharuch

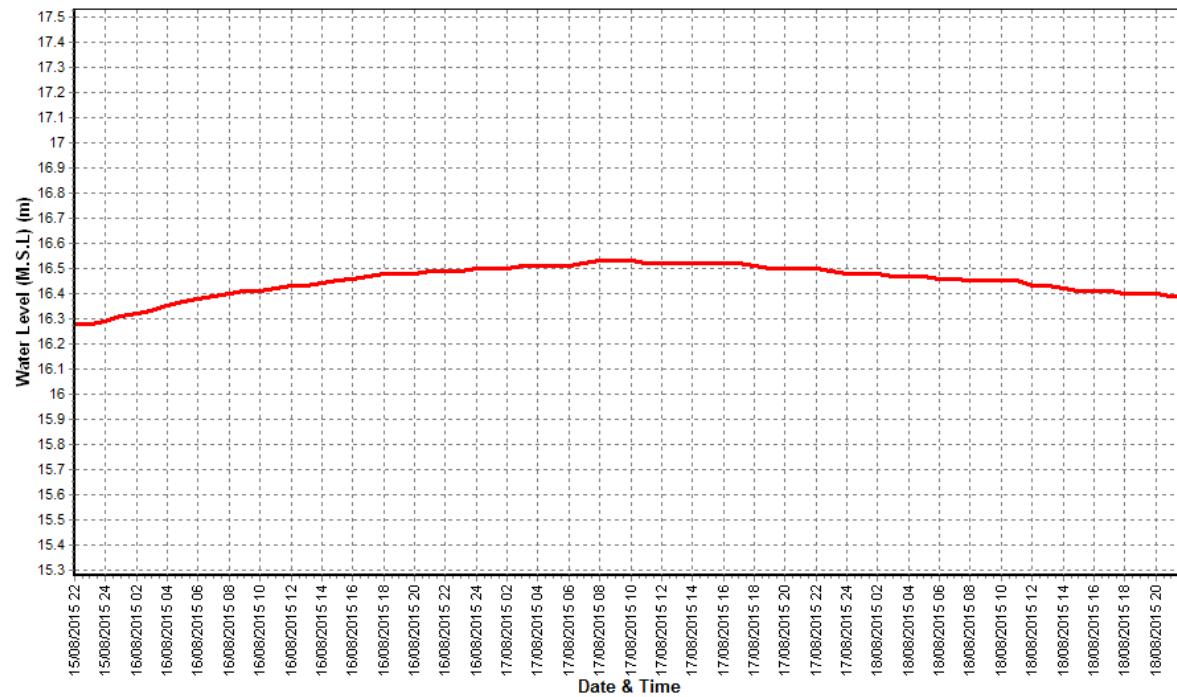

Water Level vs. Time - Graph of 2nd Highest Flood Peak during the Year (2015-2016)

Station Name: Narmada at Garudeshwar (01 02 15 030)

Division: Tapi Division, Surat

Local River: Narmada

Sub-Division: LNSD, CWC Bharuch

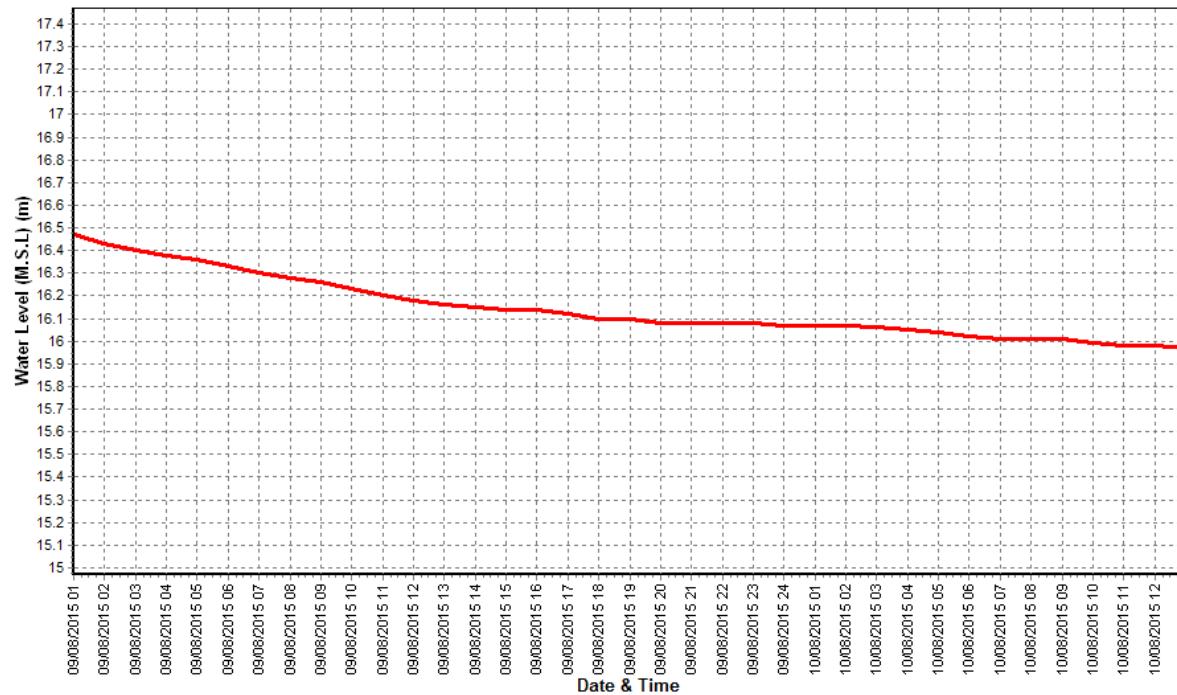

Water Level vs. Time - Graph of 3rd Highest Flood Peak during the Year (2015-2016)

Station Name: Narmada at Garudeshwar (01 02 15 030)

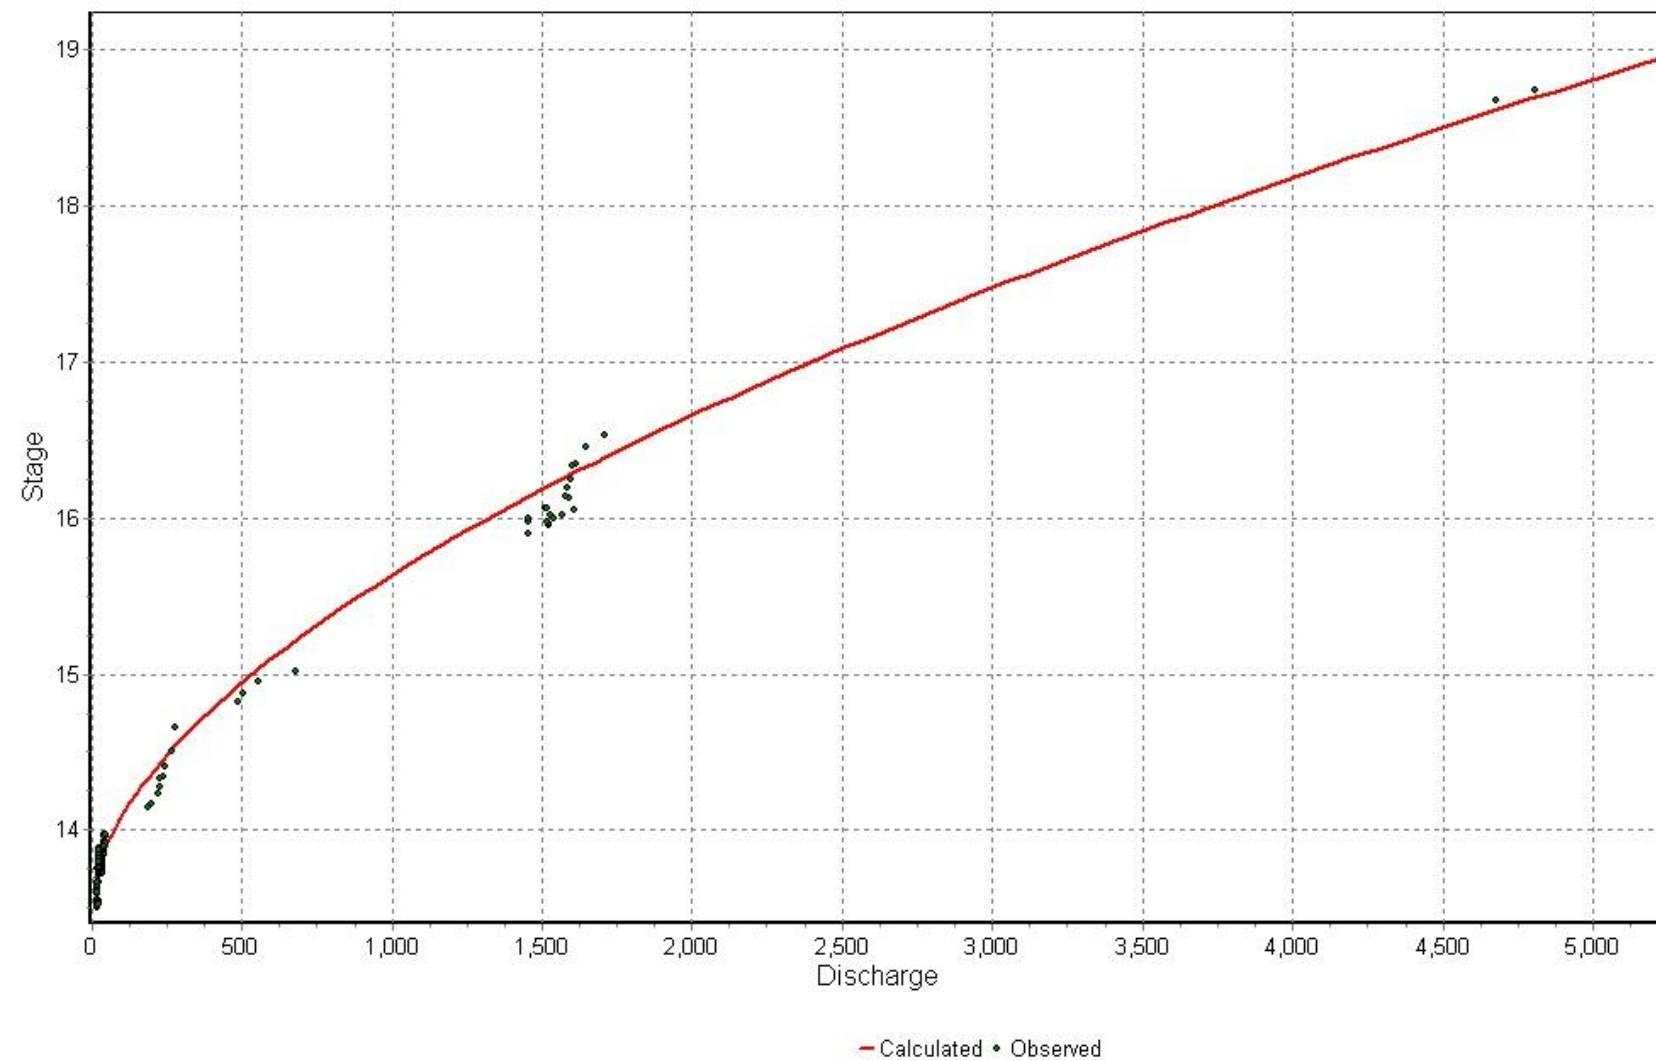

Division: Tapi Division, Surat

Local River: Narmada

Sub-Division: LNSD, CWC Bharuch

History Sheet

Site	Narmada at Handia	Water Year	2015-16
State	Madhya Pradesh	Code	010215022
Basin	Narmada	District	Harda
Tributary	-	Independent River	Narmada
Sub-Sub Tributary	-	Sub Tributary	-
Division	Narmada Division, Bhopal	Local River	Narmada
Drainage Area	54027 Sq. Km.	Sub-Division	MNSD II, CWC Bhopal
Latitude	22°29'25"	Bank	Left
Zero of Gauge (m)	258 (M.S.L.)	Longitude	76°59'37"
	Opening Date	09/02/1977	
Gauge	09/02/1977	Closing Date	
Discharge	26/04/1977		
Sediment	11/12/1977		
Water Quality	01/08/1979		

Annual Maximum / Minimum discharge with corresponding Water Level (M.S.L)

Peak Computed Discharge = 4678 cumecs on 20/07/2015 Corres. Water Level :266.02 m
 Lowest Computed Discharge = 44.56 cumecs on 10/03/2016 Corres. Water Level :260.57 m

Q: Observed/Computed Discharge in cumecs **WL:** Corresponding Mean Water Level(M.S.L) in m *****:Computed Discharge
#:Discarded Discharge (values changed as per rating curve)
Note:Missing values ignored while arriving at Annual Runoff

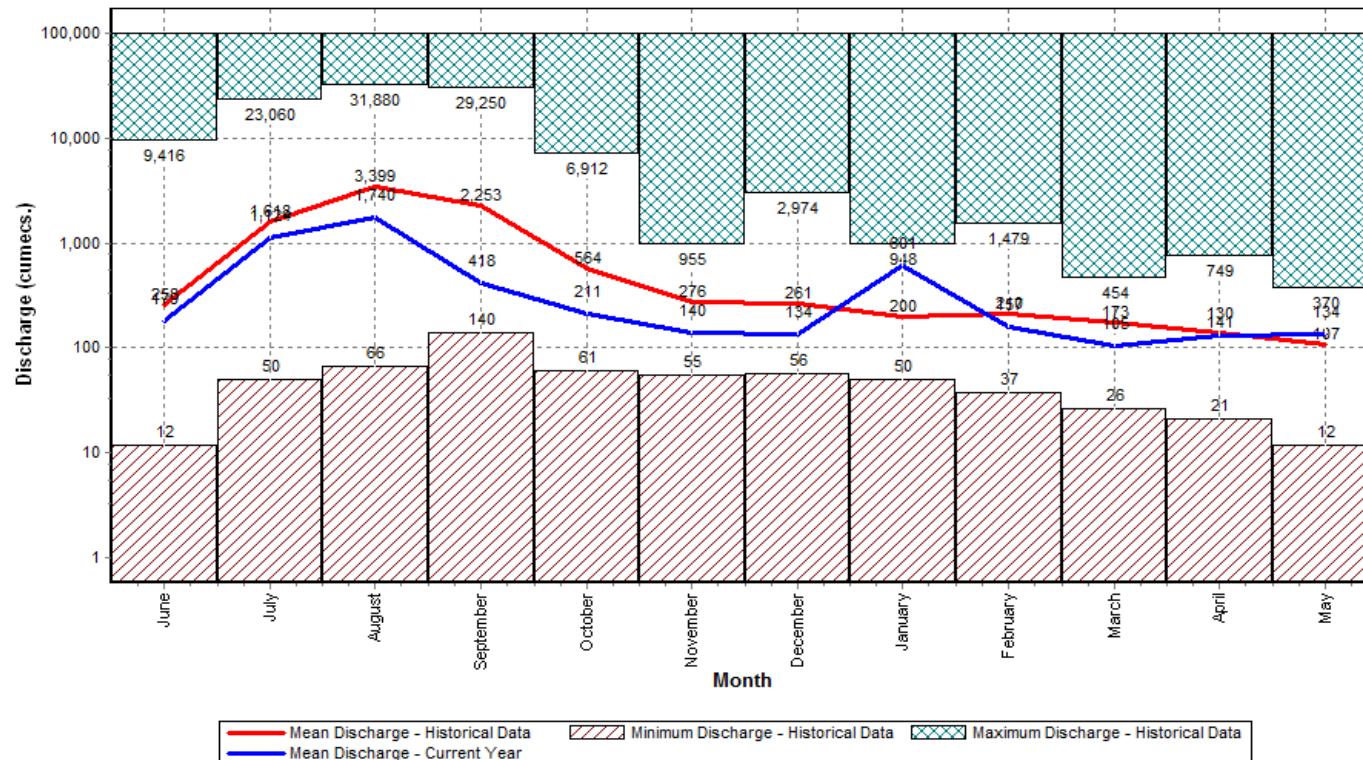

Histogram- Hydrograph for Water Year : 2015-16 (Data considered : 1977-2016)

Station Name : Narmada at Handia (010215022)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD II, CWC Bhopal

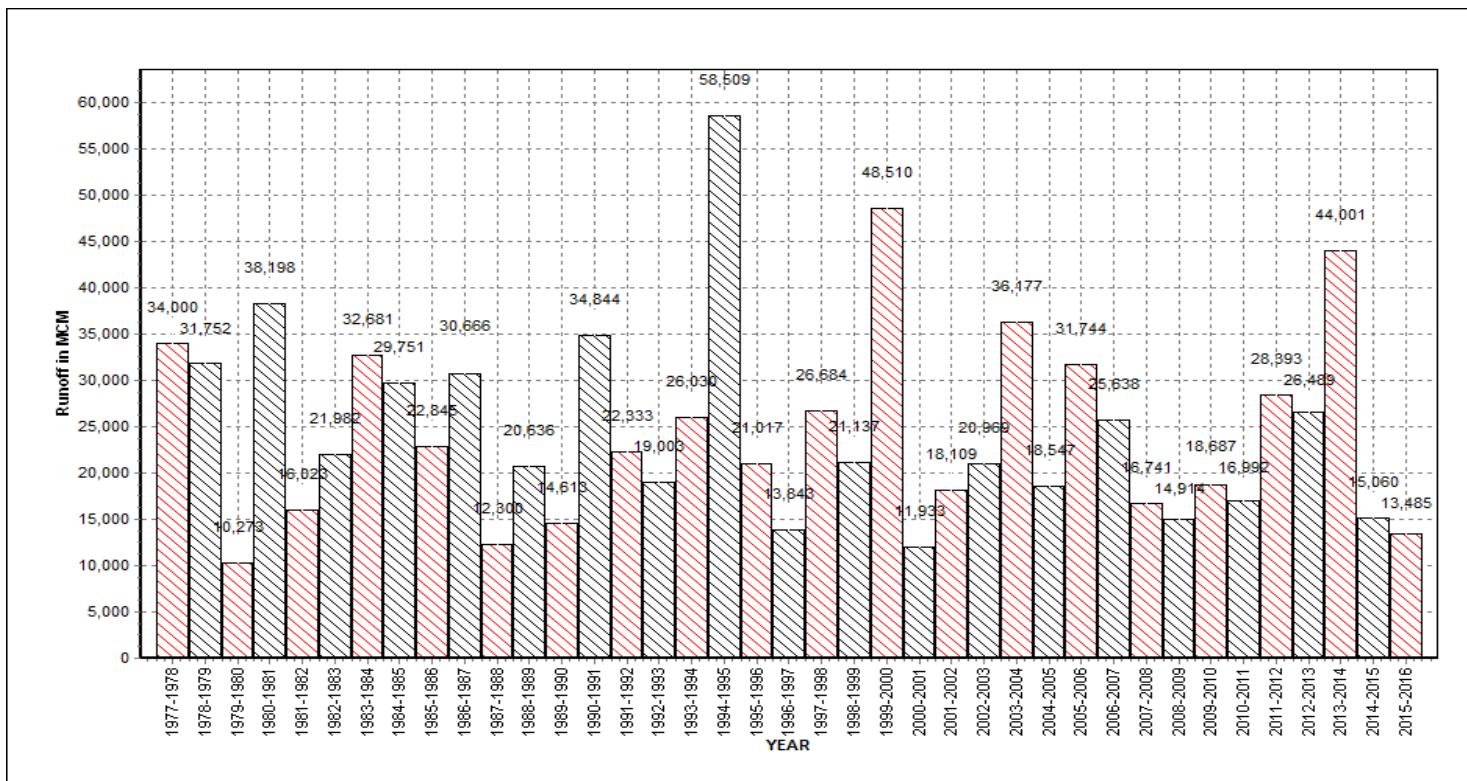

Annual Runoff Values for the period (1977 – 2016)

Station Name : Narmada at Handia (010215022)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD II, CWC Bhopal

Note: Missing values have not been considered while arriving at Annual Runoff

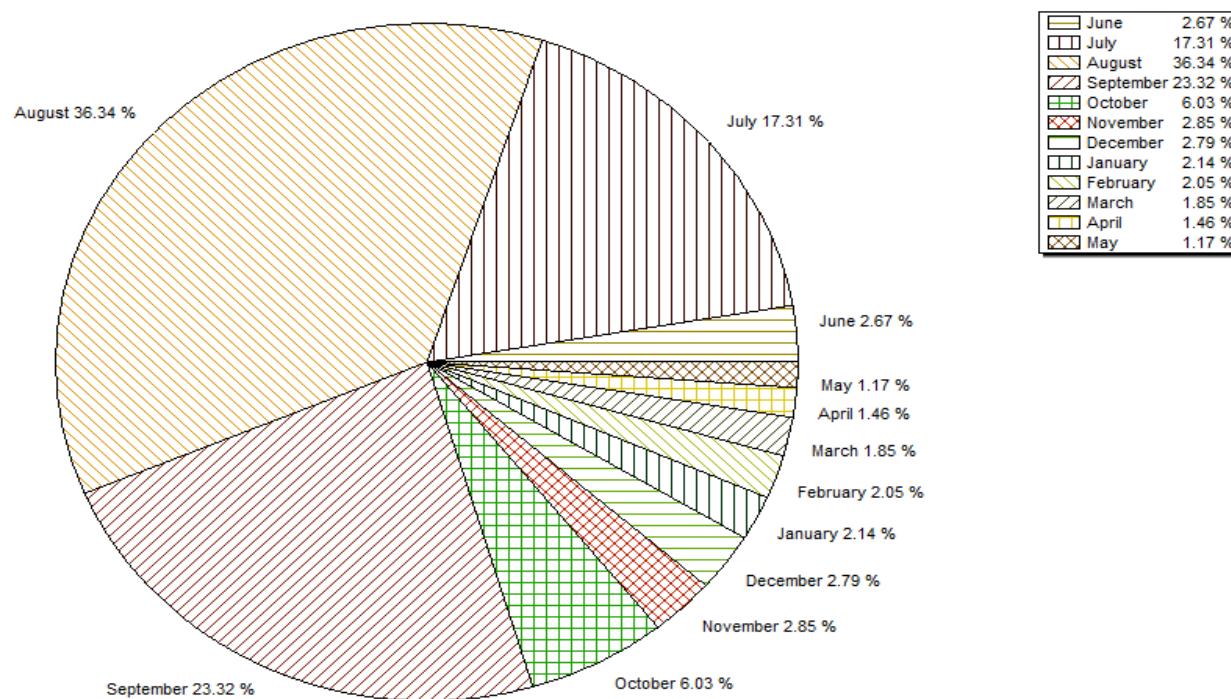

Monthly Average Runoff based on period (1977 – 2016)

Station Name : Narmada at Handia (010215022)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD II, CWC Bhopal

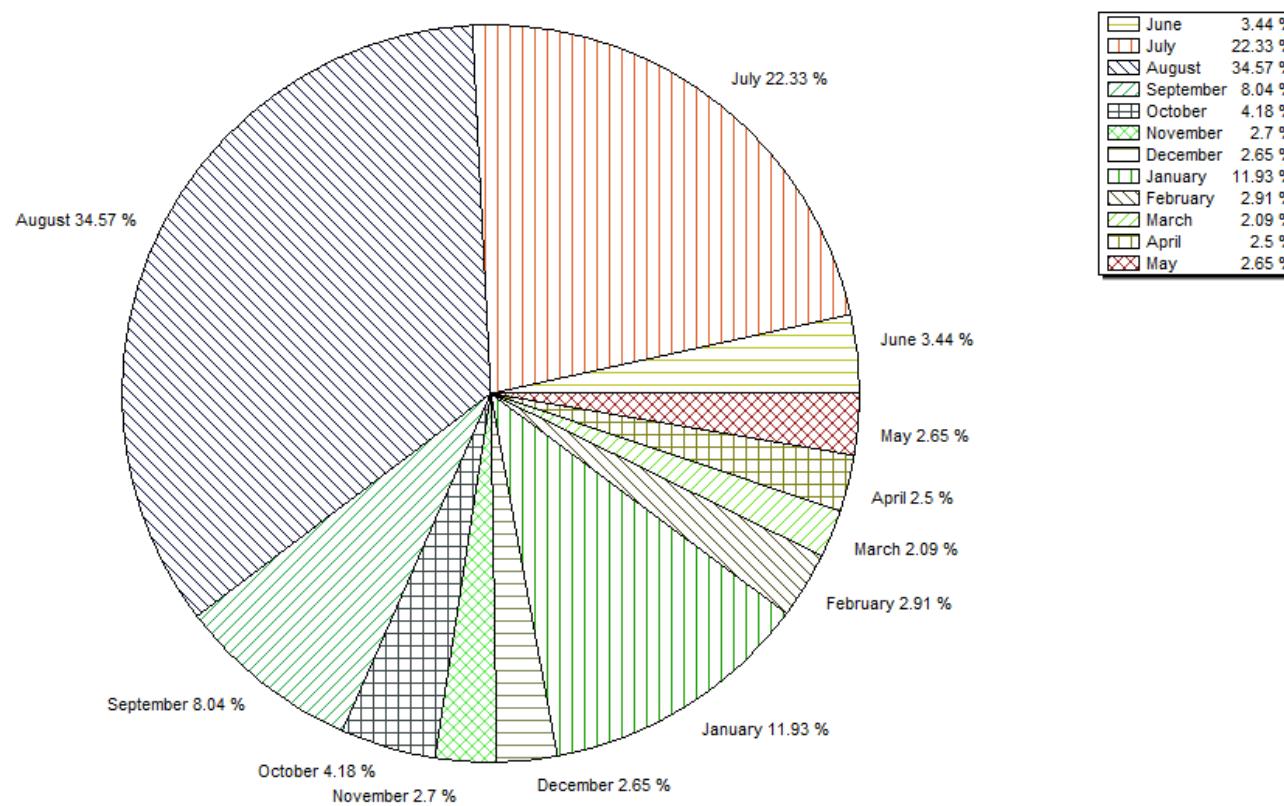

Monthly Runoff for the Year (2015-16)

Station Name : Narmada at Handia (010215022)

Local River : Narmada

Division : Narmada Division, Bhopal

Sub-Division : MNSD II, CWC Bhopal

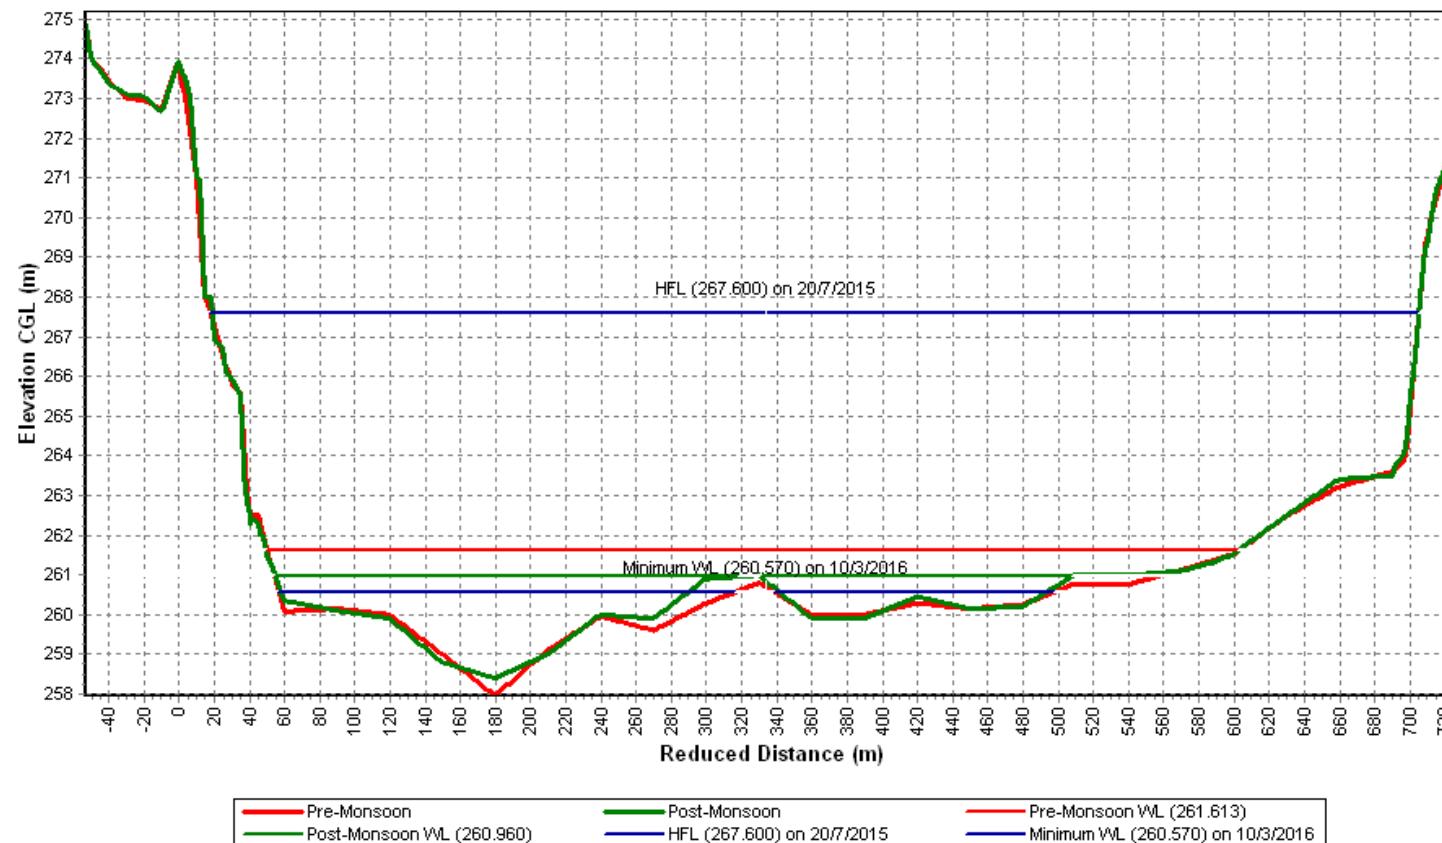

Pre-Monsoon & Post-Monsoon X-Section for Water Year (2015-16)

Station Name : Narmada at Handia (010215022)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD II, CWC Bhopal

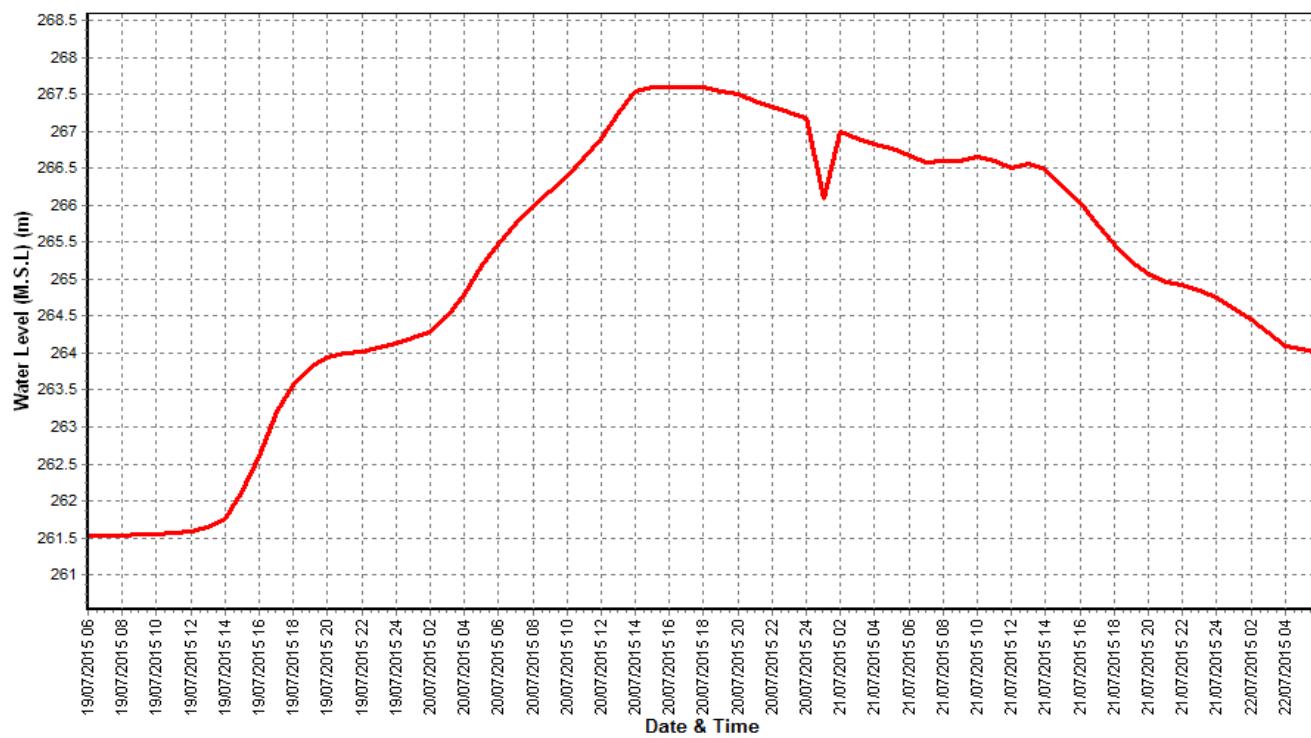

Water Level vs. Time - Graph of Highest Flood Peak during the Year (2015-16)

Station Name : Narmada at Handia (010215022)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division :MNSD II, CWC Bhopal

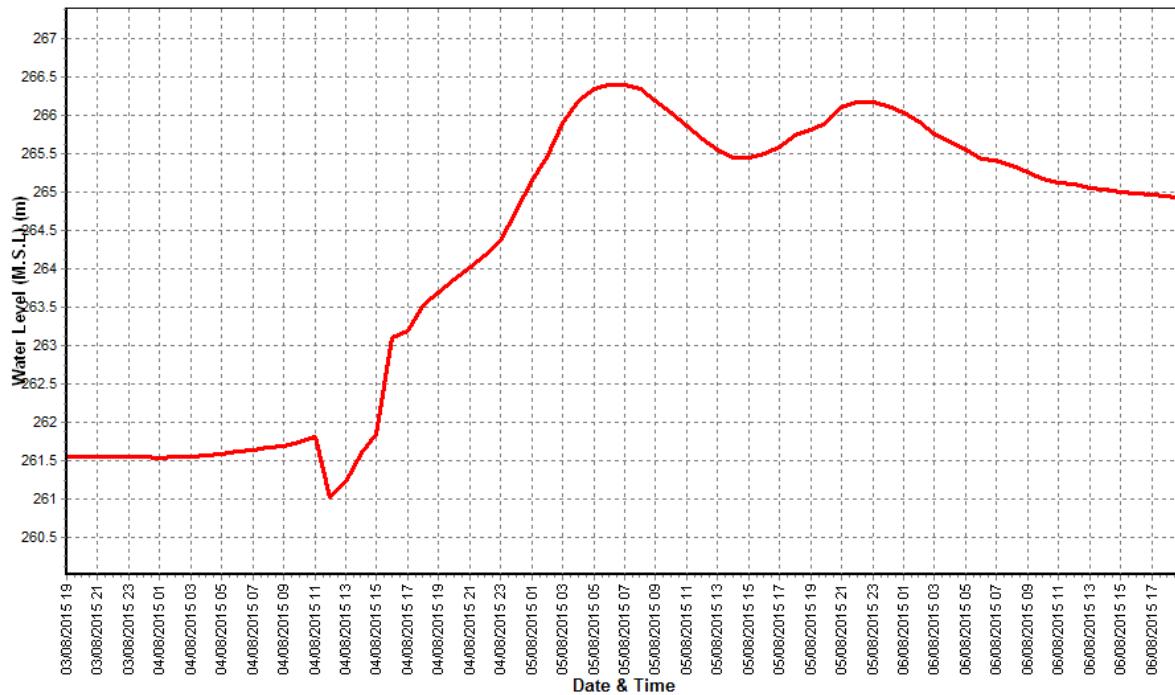

Water Level vs. Time - Graph of 2nd Highest Flood Peak during the Year (2015-16)

Station Name : Narmada at Handia (010215022)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division :MNSD II, CWC Bhopal

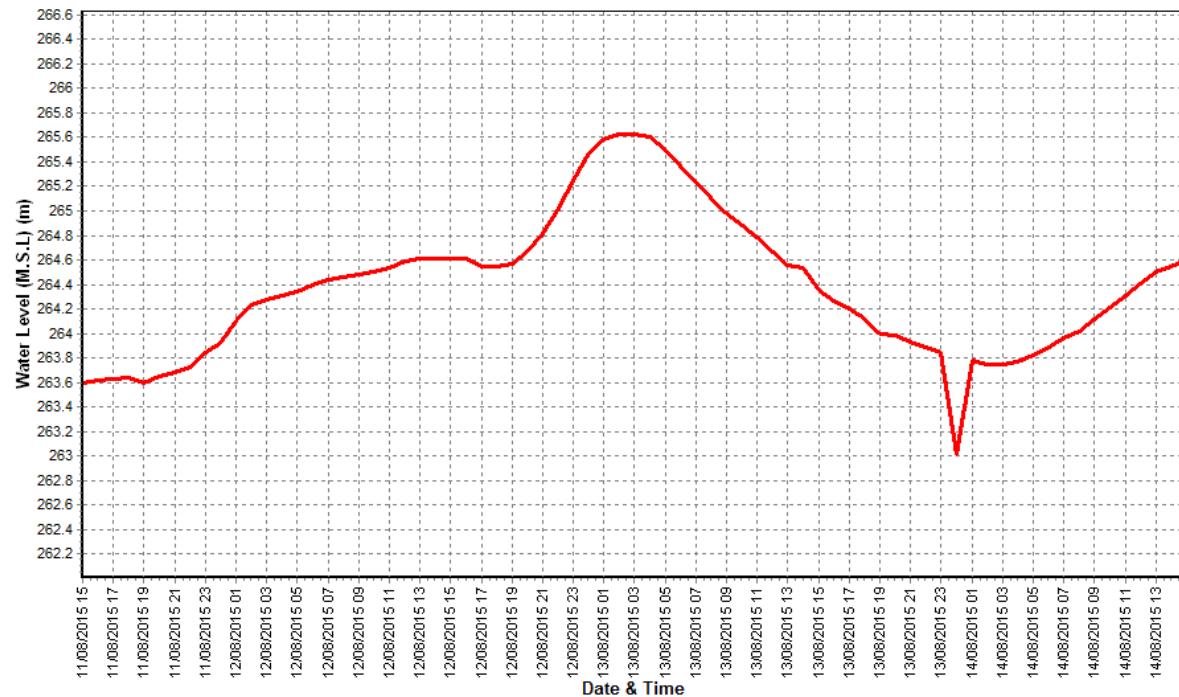

Water Level vs. Time - Graph of 3rd Highest Flood Peak during the Year (2015-16)

Station Name : Narmada at Handia (010215022)

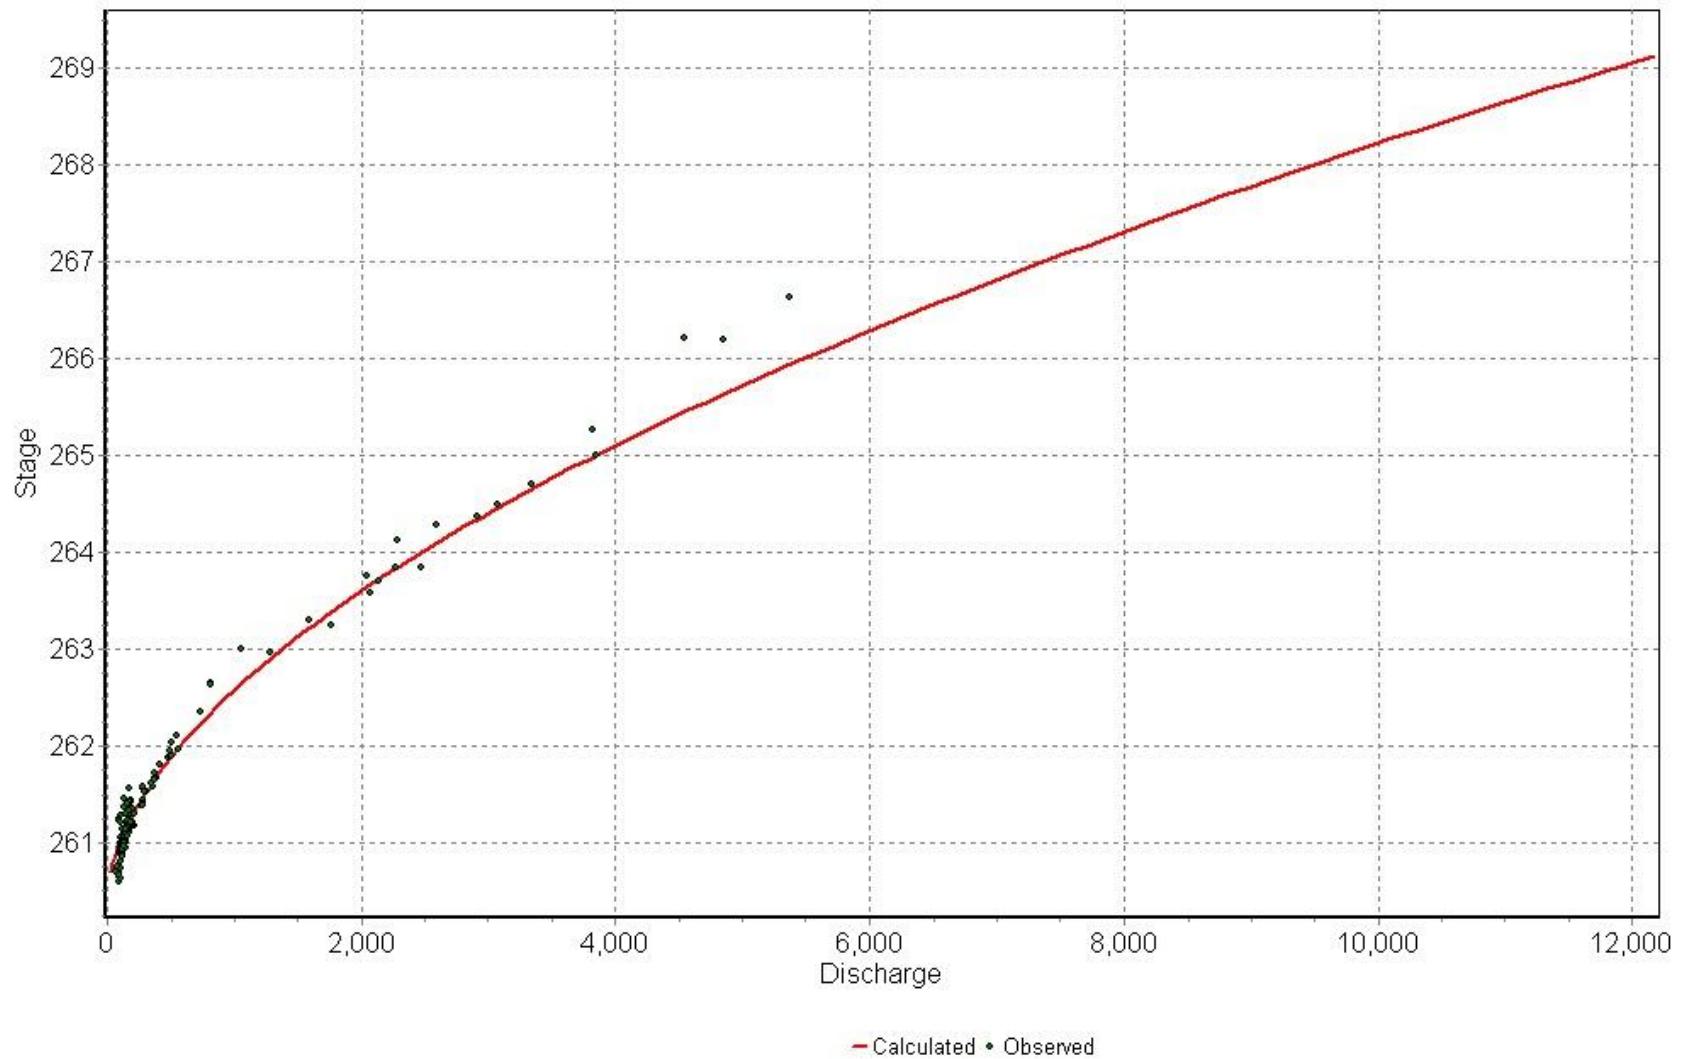

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division :MNSD II, CWC Bhopal

Histogram- Hydrograph for Water Year : 2015-16 (Data considered : 1973-2016)

Station Name : Narmada at Hoshangabad (010215019)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

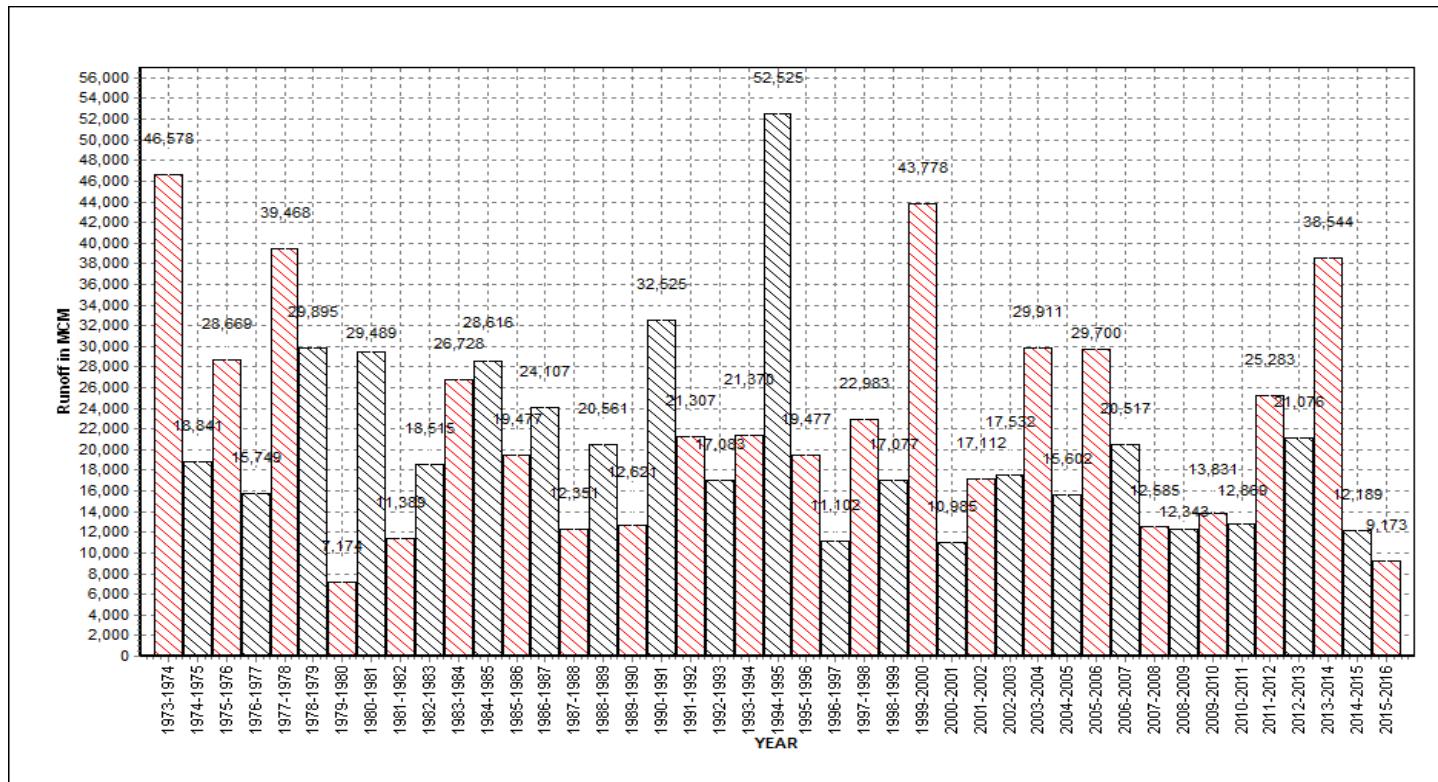

Annual Runoff Values for the period (1973 – 2016)

Station Name : Narmada at Hoshangabad (010215019)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

Note: Missing values have not been considered while arriving at Annual Runoff

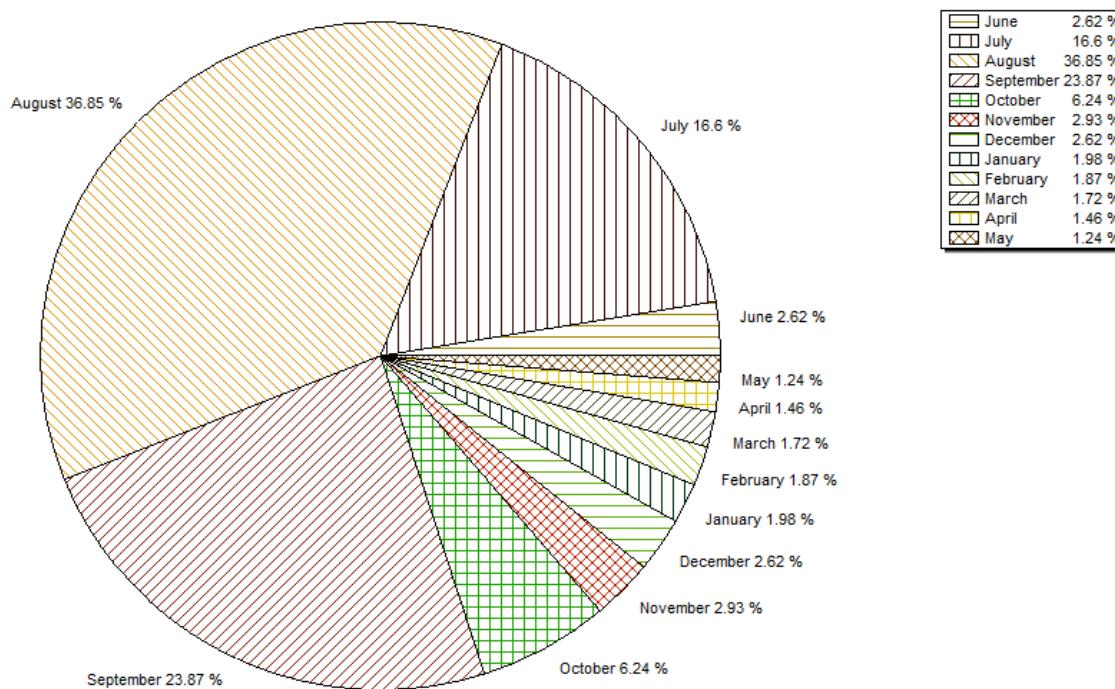

Monthly Average Runoff based on period (1973-2014)

Station Name : Narmada at Hoshangabad (010215019)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

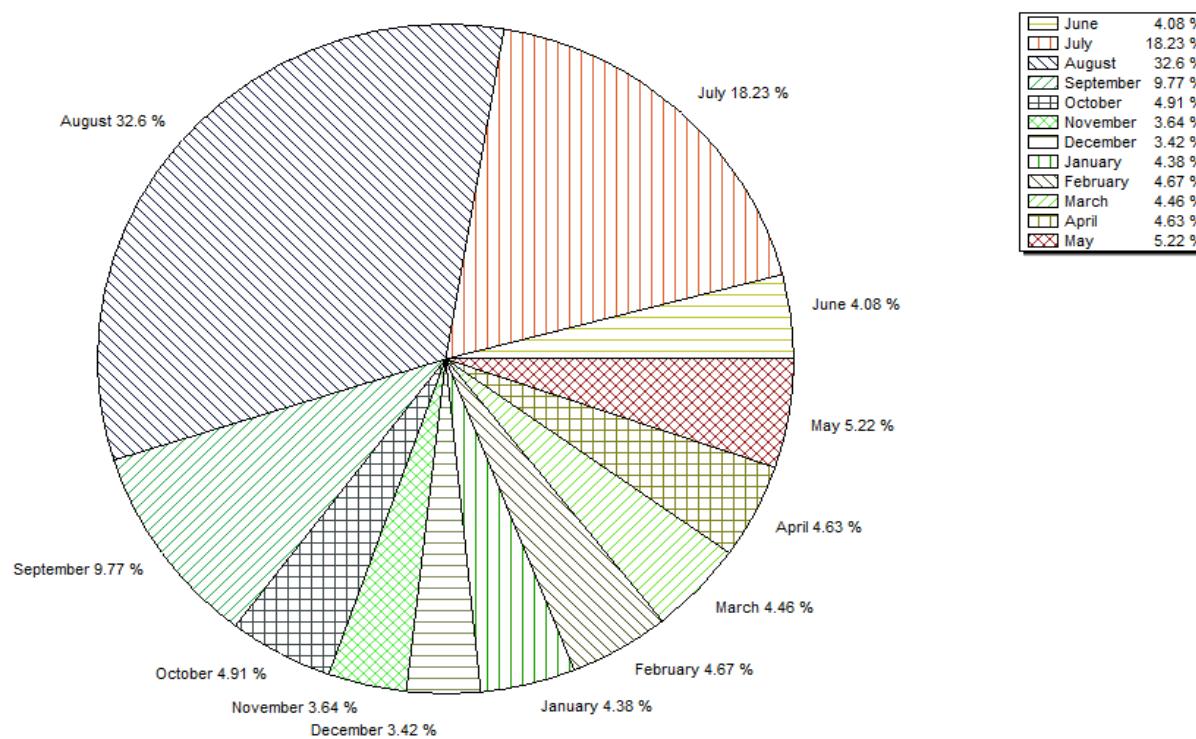

Monthly Runoff for the Year (2015-16)

Station Name : Narmada at Hoshangabad (010215019)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

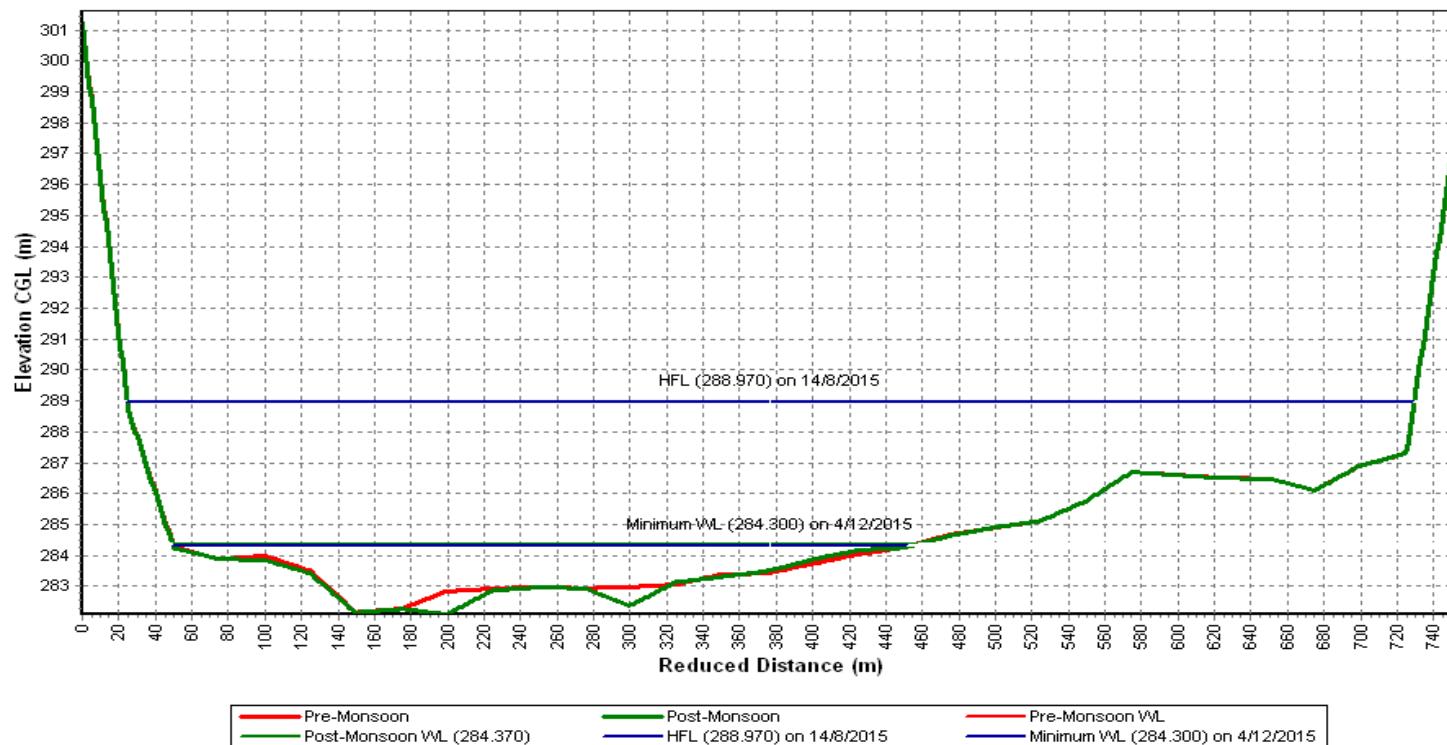

Pre-Monsoon & Post-Monsoon X-Section for Water Year (2015-16)

Station Name : Narmada at Hoshangabad (010215019)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

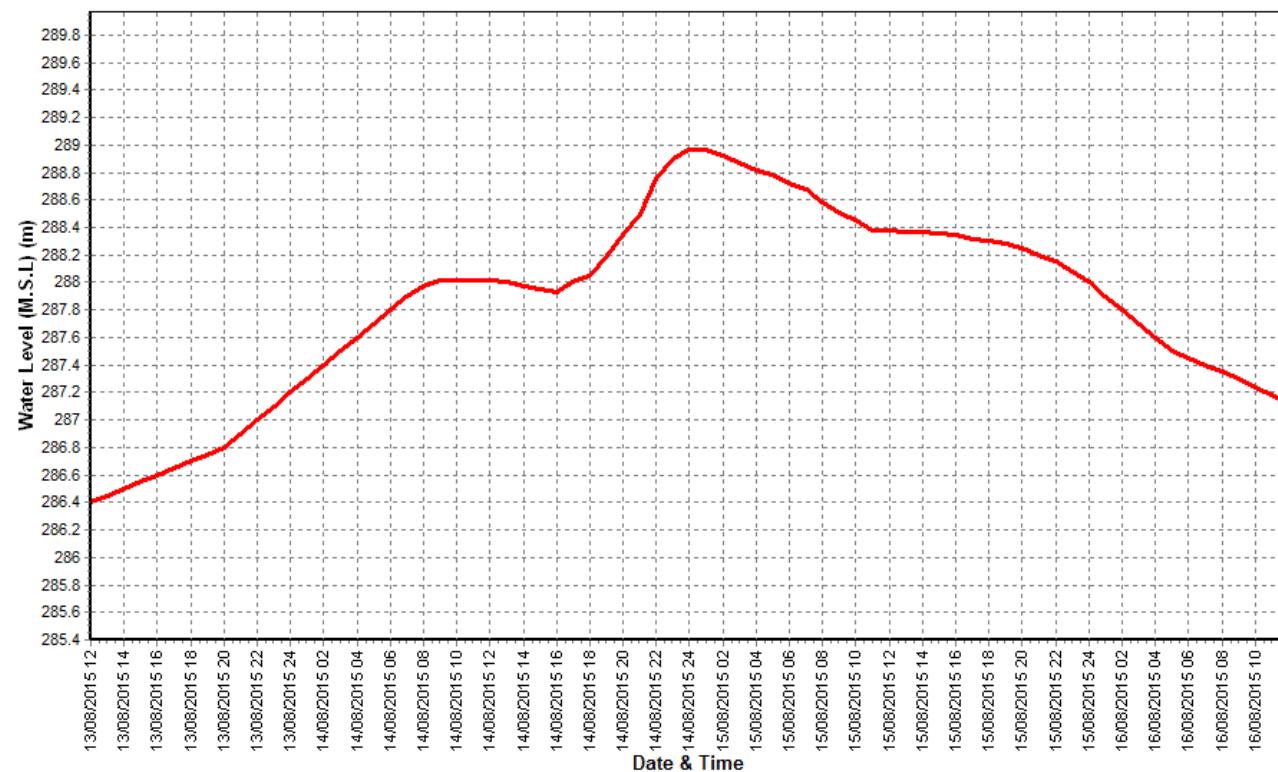

Water Level vs. Time - Graph of Highest Flood Peak during the Year (2015-16)

Station Name : Narmada at Hoshangabad (010215019)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

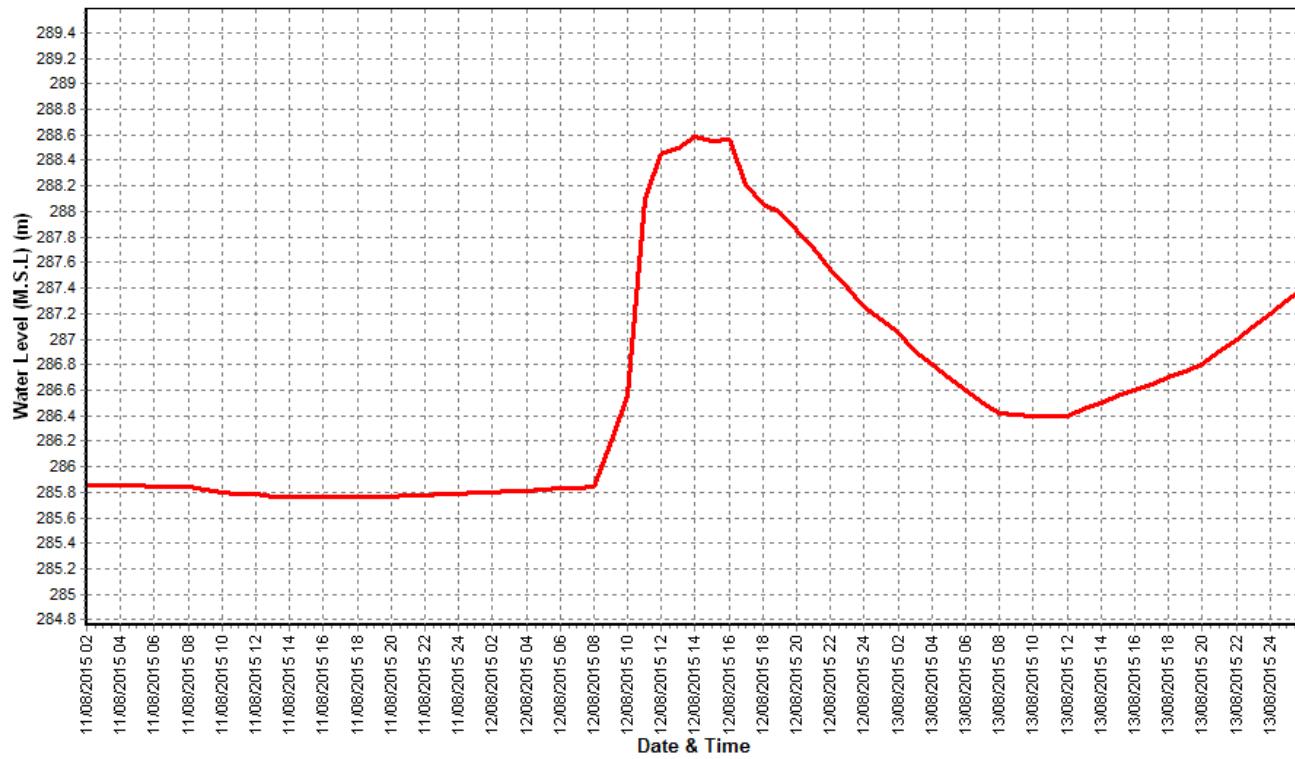

Water Level vs. Time - Graph of 2nd Highest Flood Peak during the Year (2015-16)

Station Name : Narmada at Hoshangabad (010215019)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

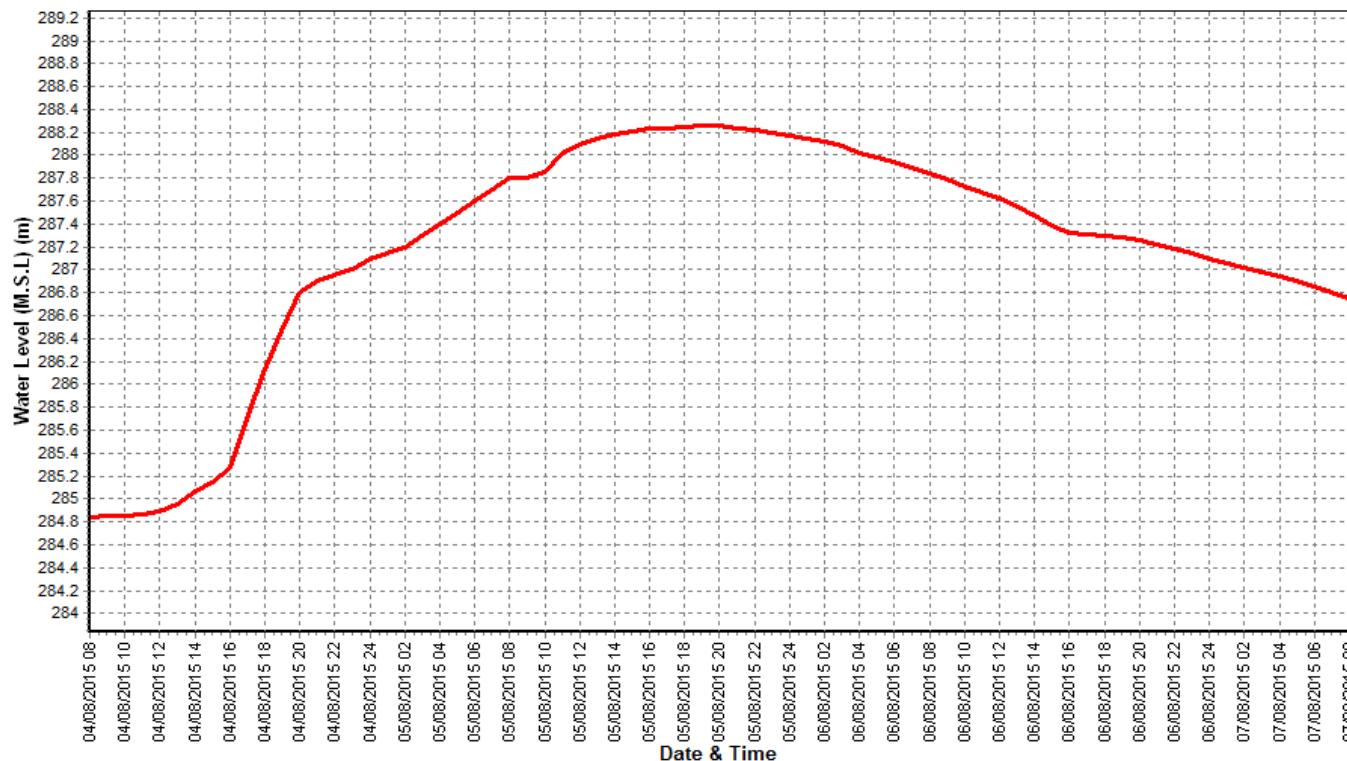

Water Level vs. Time - Graph of 3rd Highest Flood Peak during the Year (2015-16)

Station Name : Narmada at Hoshangabad (010215019)

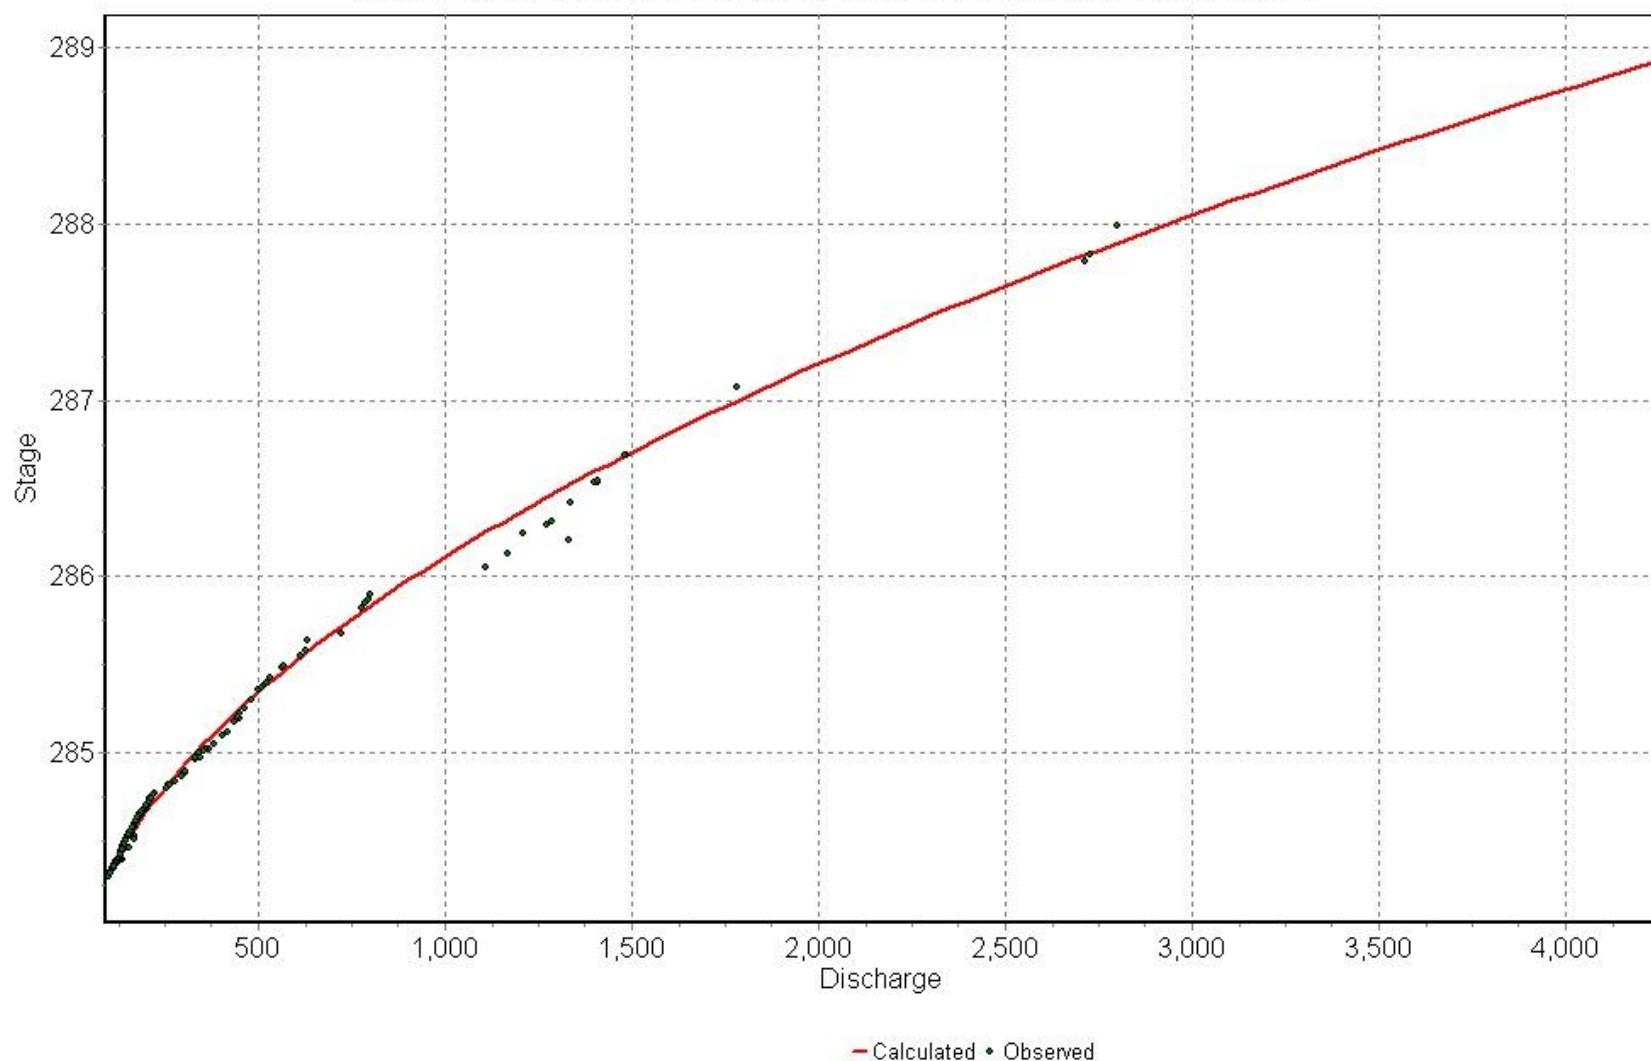

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

Q: Observed/Computed Discharge in cumecs **WL:** Corresponding Mean Water Level(M.S.L) in m *****:Computed Discharge
#:Discarded Discharge (values changed as per rating curve)
Note:Missing values ignored while arriving at Annual Runoff

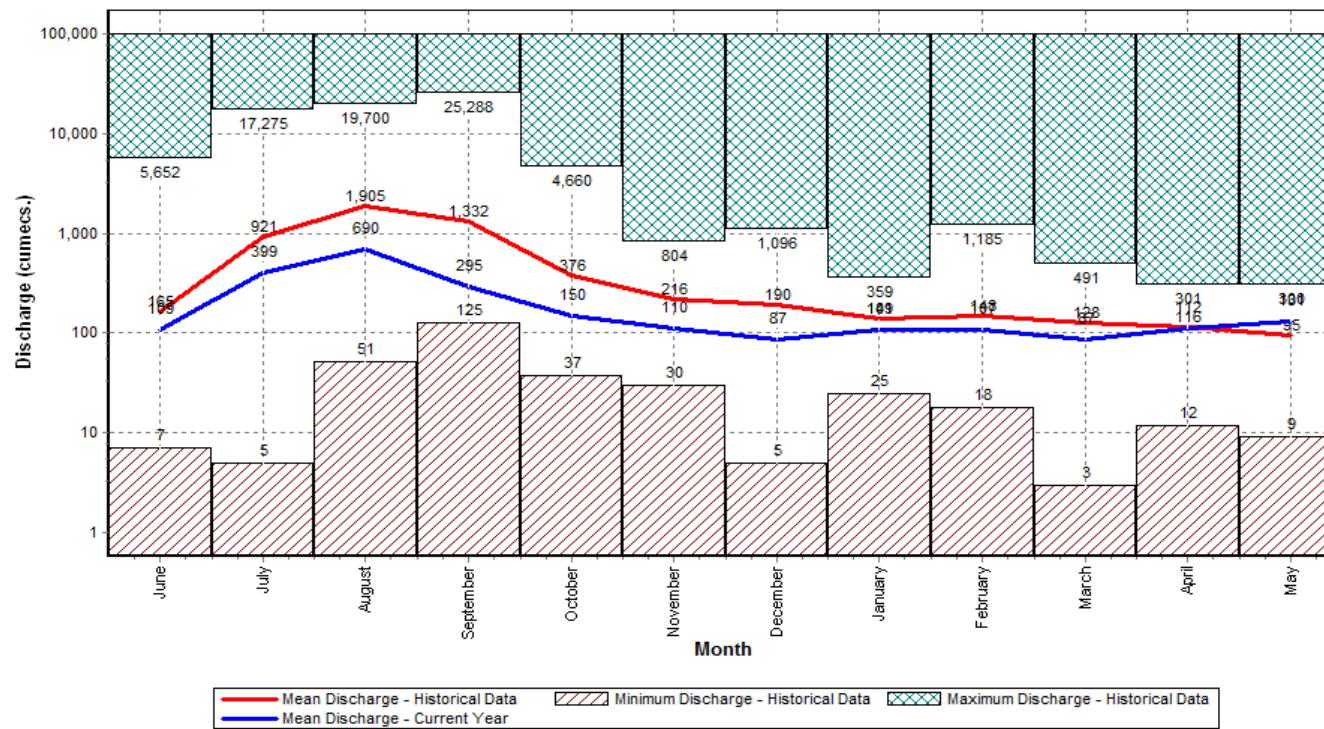

Histogram - Hydrograph for Water Year : 2015-16 (Data considered : 1978-2016)

Station Name : Narmada at Sandia (010215013)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

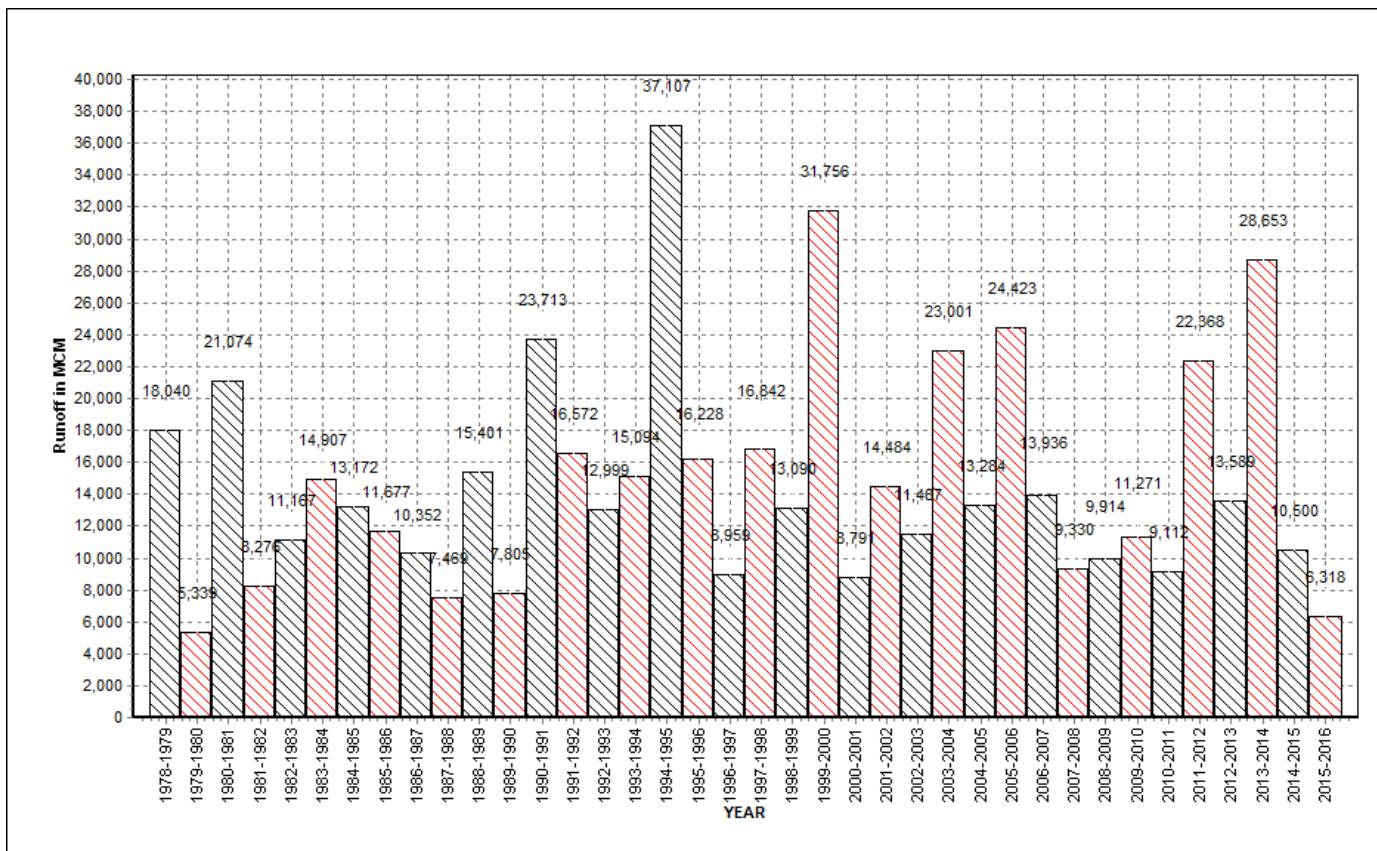

Annual Runoff Values for the period (1978 – 2016)

Station Name : Narmada at Sandia (010215013)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

Note: Missing values have not been considered while arriving at Annual Runoff

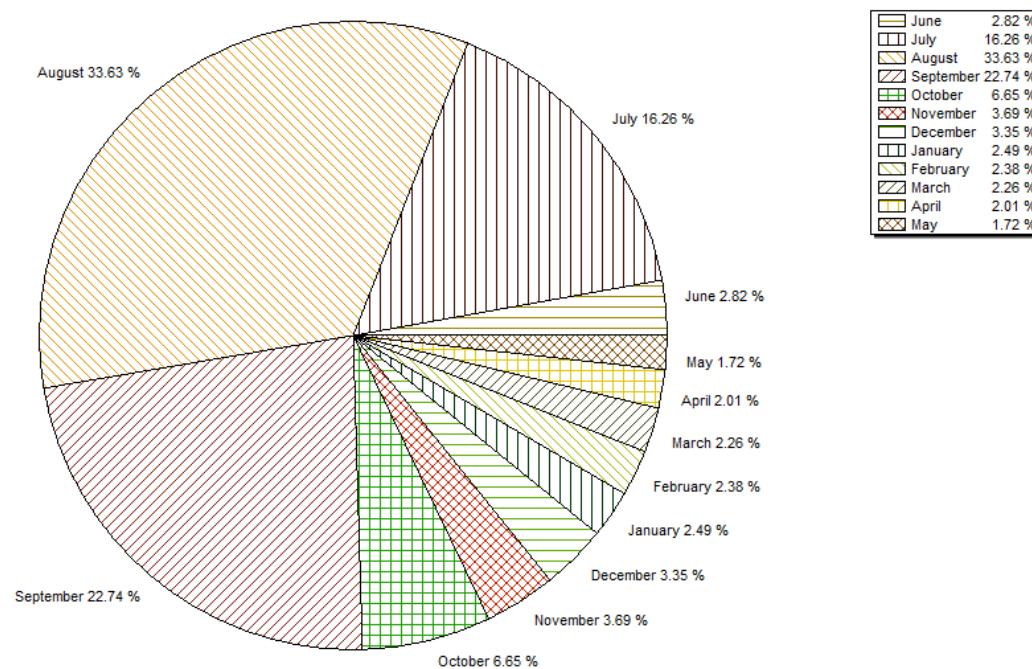

Monthly Average Runoff based on period (1978-2014)

Station Name : Narmada at Sandia (010215013)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

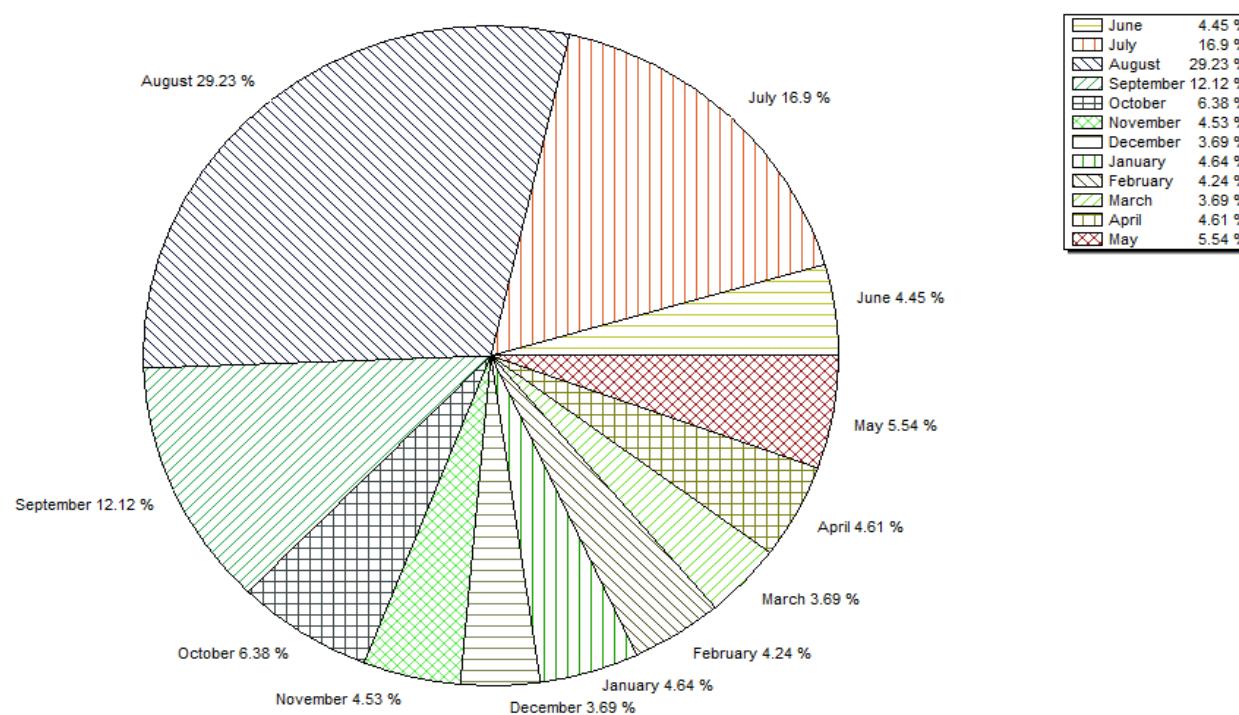

Monthly Runoff for the Year (2015-16)

Station Name : Narmada at Sandia (010215013)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

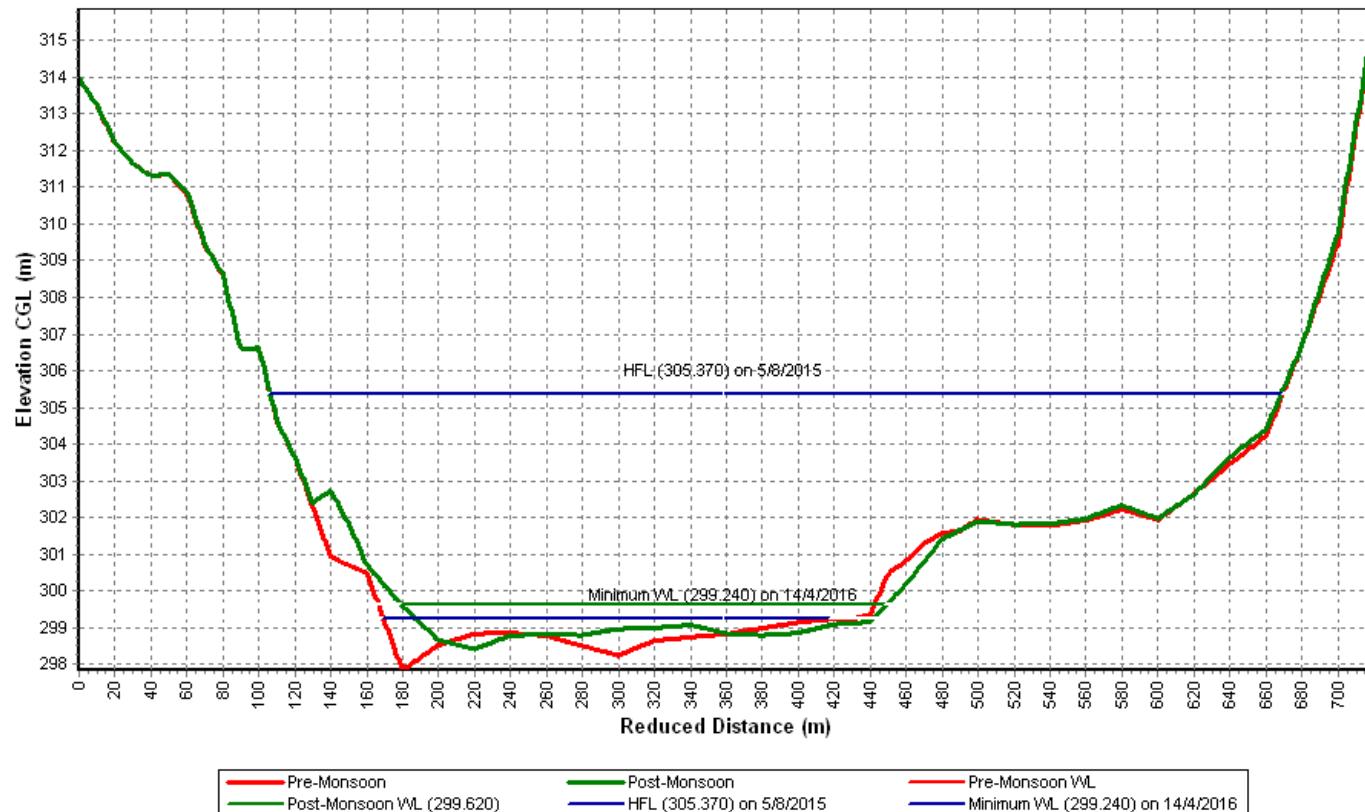

Pre-Monsoon & Post-Monsoon X-Section for Water Year (2015-16)

Station Name : Narmada at Sandia (010215013)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

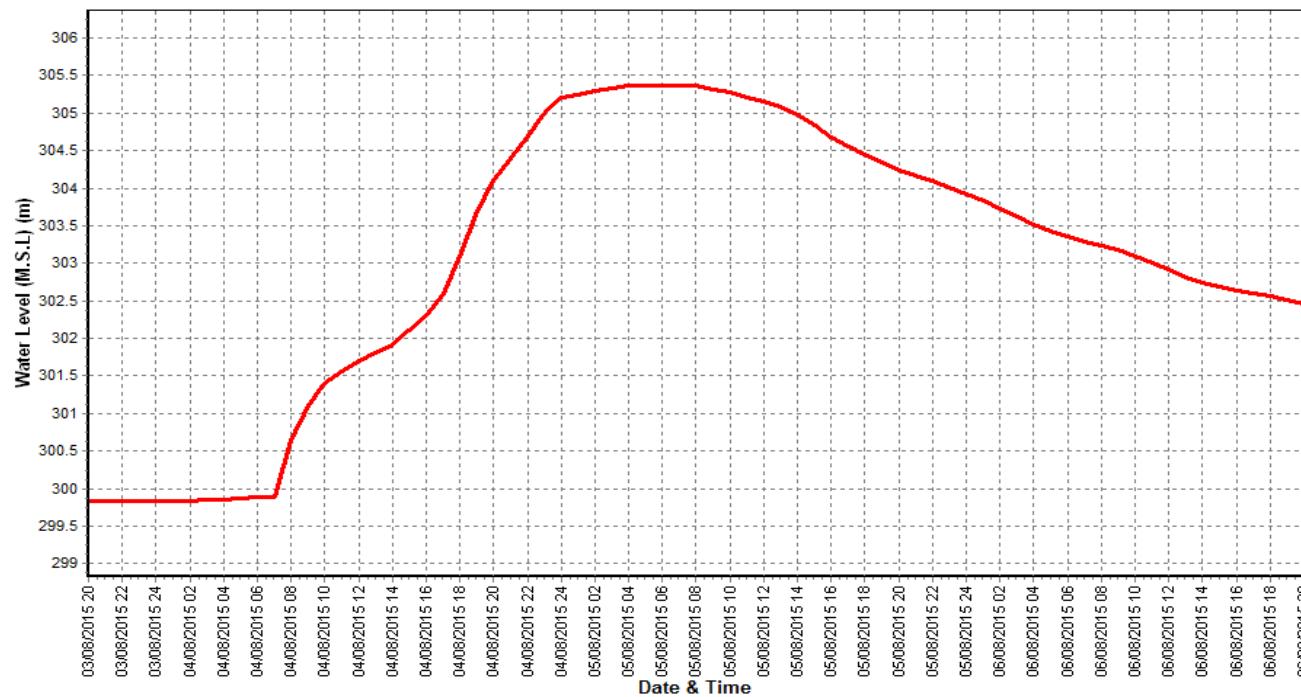

Water Level vs. Time - Graph of Highest Flood Peak during the Year (2015-16)

Station Name : Narmada at Sandia (010215013)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

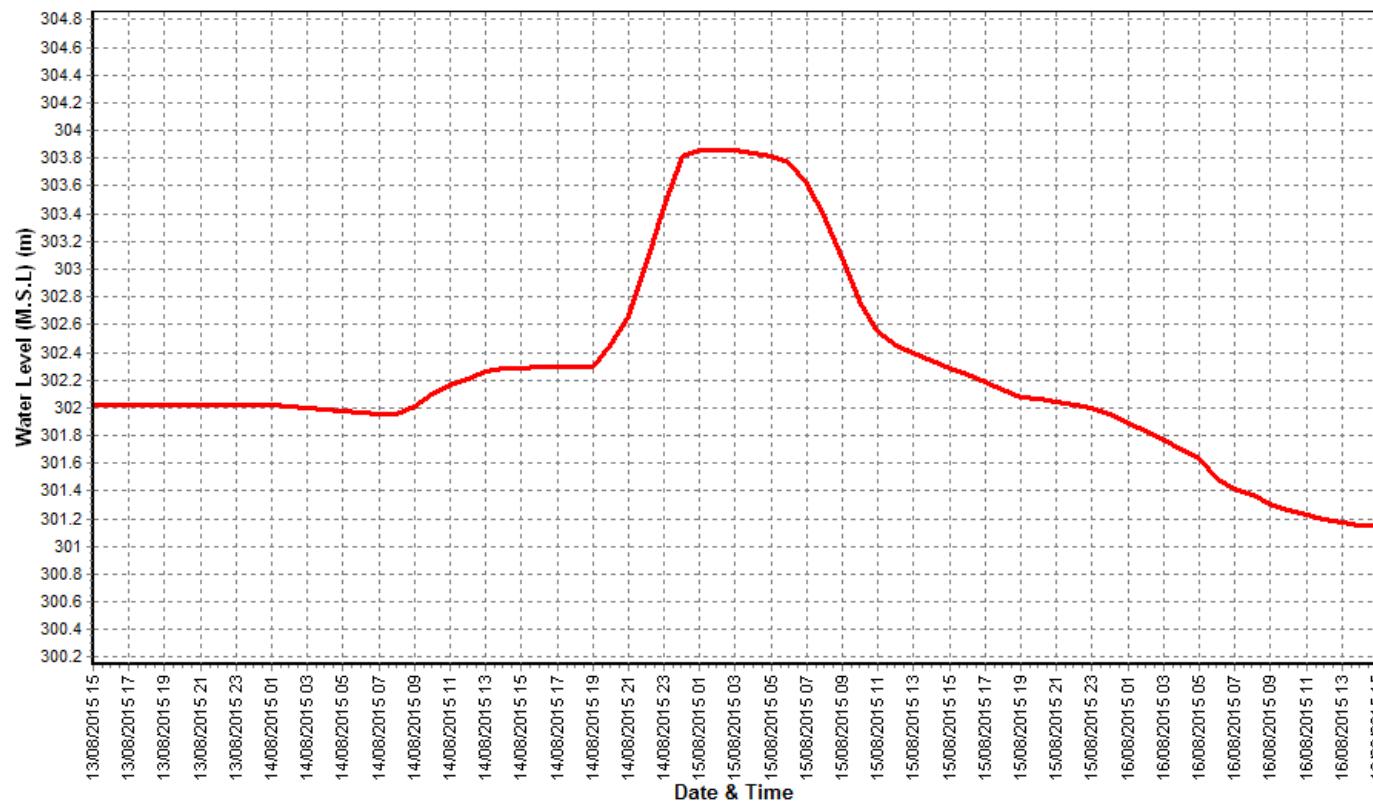

Water Level vs. Time - Graph of 2nd Highest Flood Peak during the Year (2015-16)

Station Name : Narmada at Sandia (010215013)

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

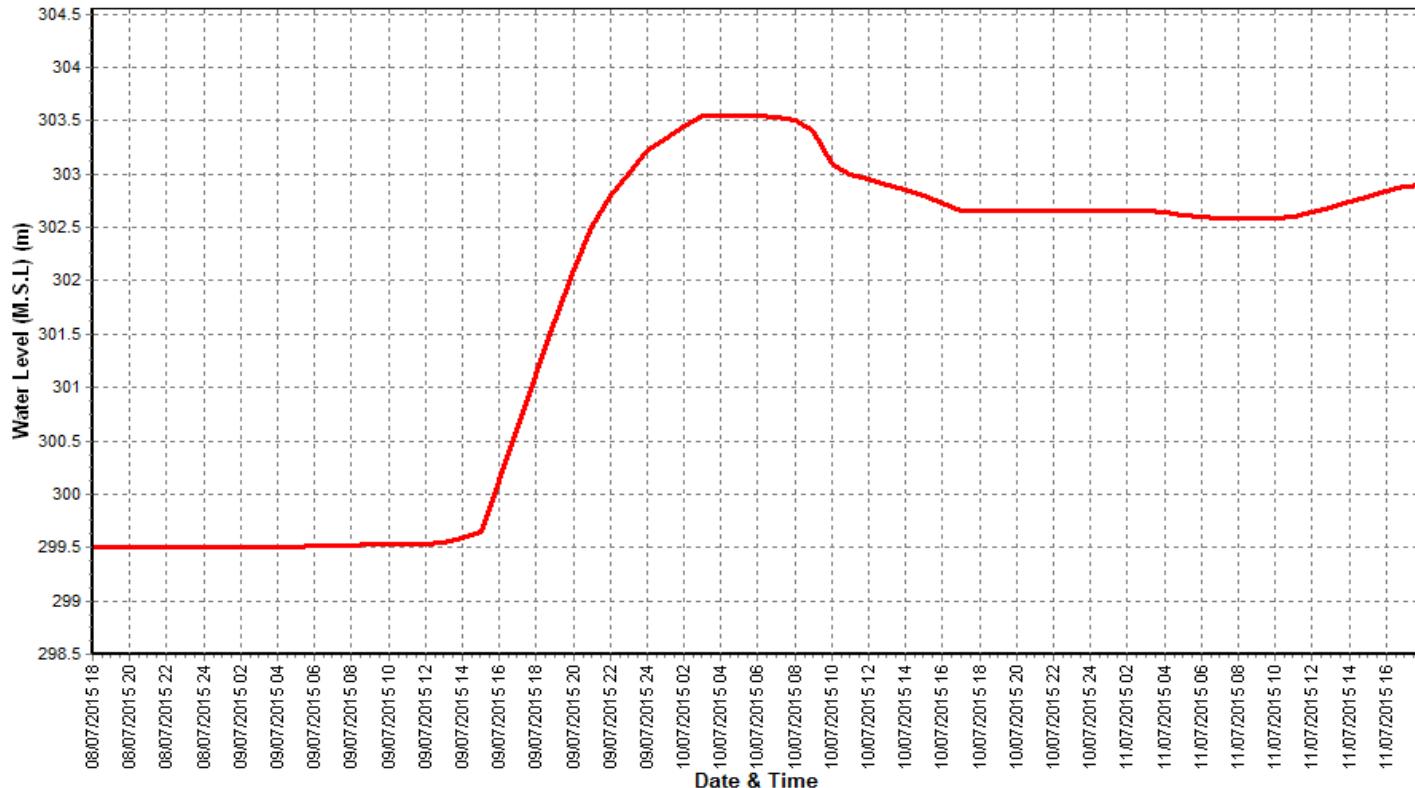

Water Level vs. Time - Graph of 3rd Highest Flood Peak during the Year (2015-16)

Station Name : Narmada at Sandia (010215013)

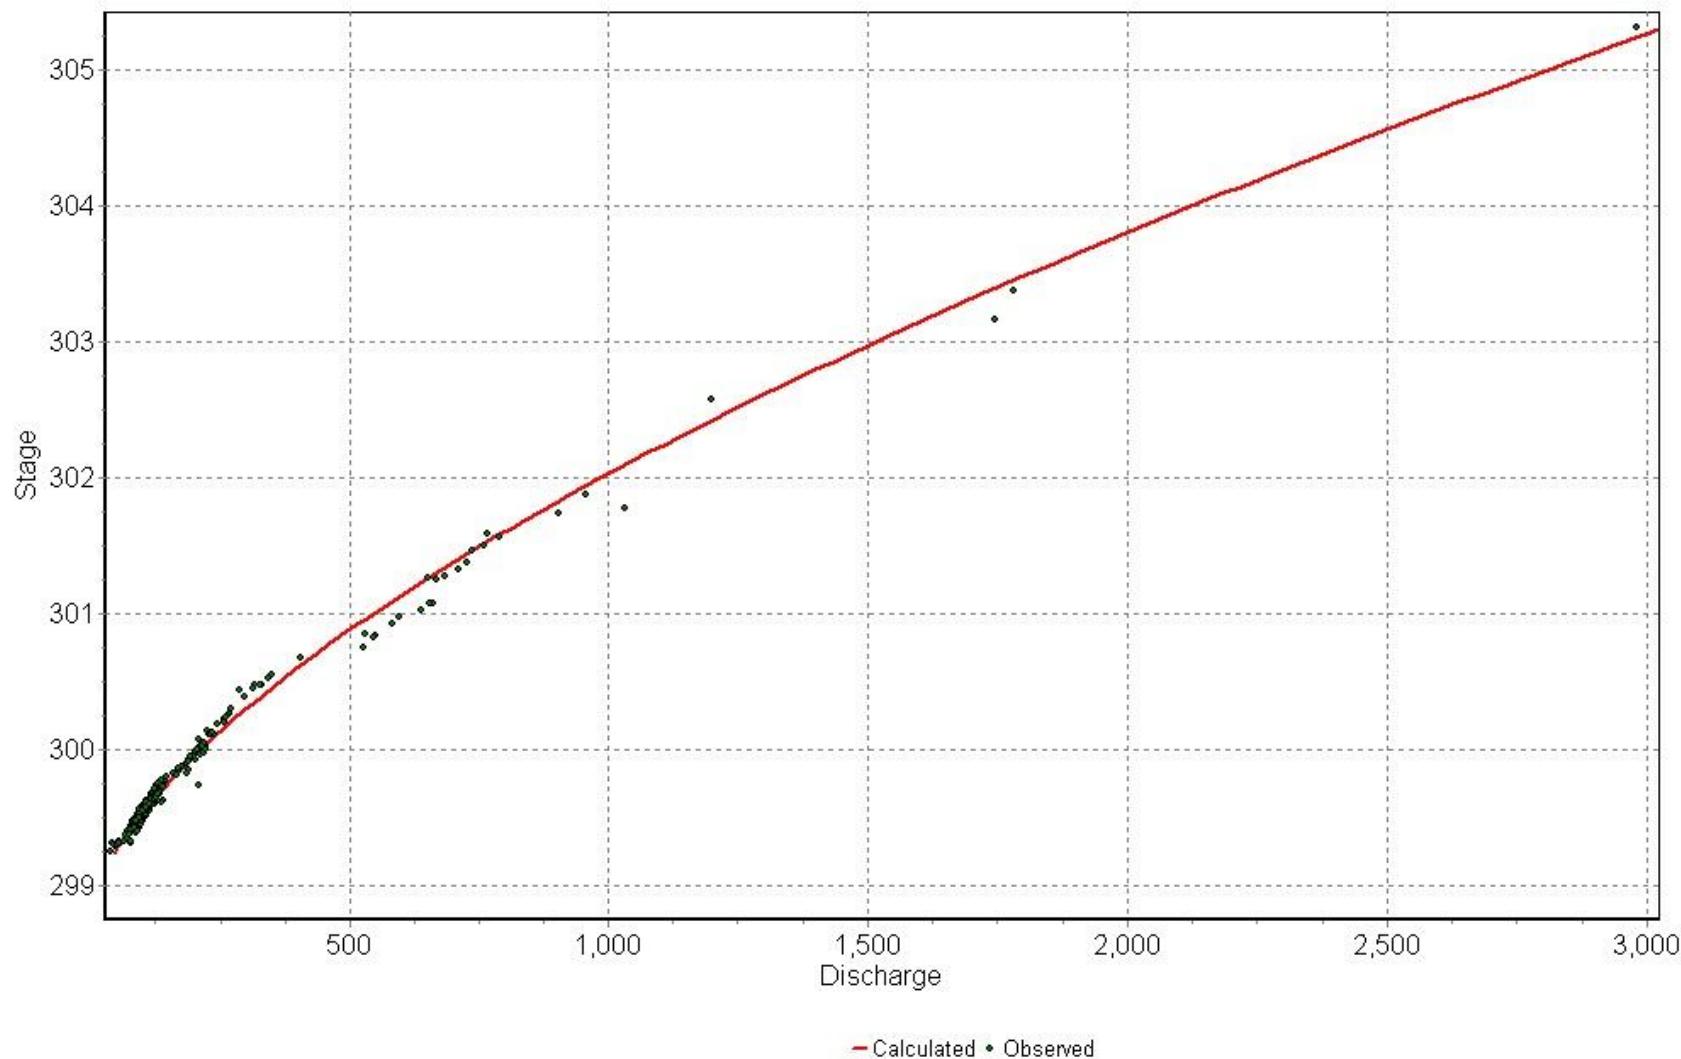

Division : Narmada Division, Bhopal

Local River : Narmada

Sub-Division : MNSD I, CWC Hoshangabad

Peak Computed Discharge = 360.5 cumecs on 15/08/2015 Corres. Water Level :324.25 m
 Lowest Computed Discharge = 0.038 cumecs on 28/02/2016 Corres. Water Level :322.25 m

Q: Observed/Computed Discharge in cumecs WL:Corresponding Mean Water Level(M.S.L) in m *:Computed Discharge
#:Discarded Discharge (values changed as per rating curve)
Note:Missing values ignored while arriving at Annual Runoff

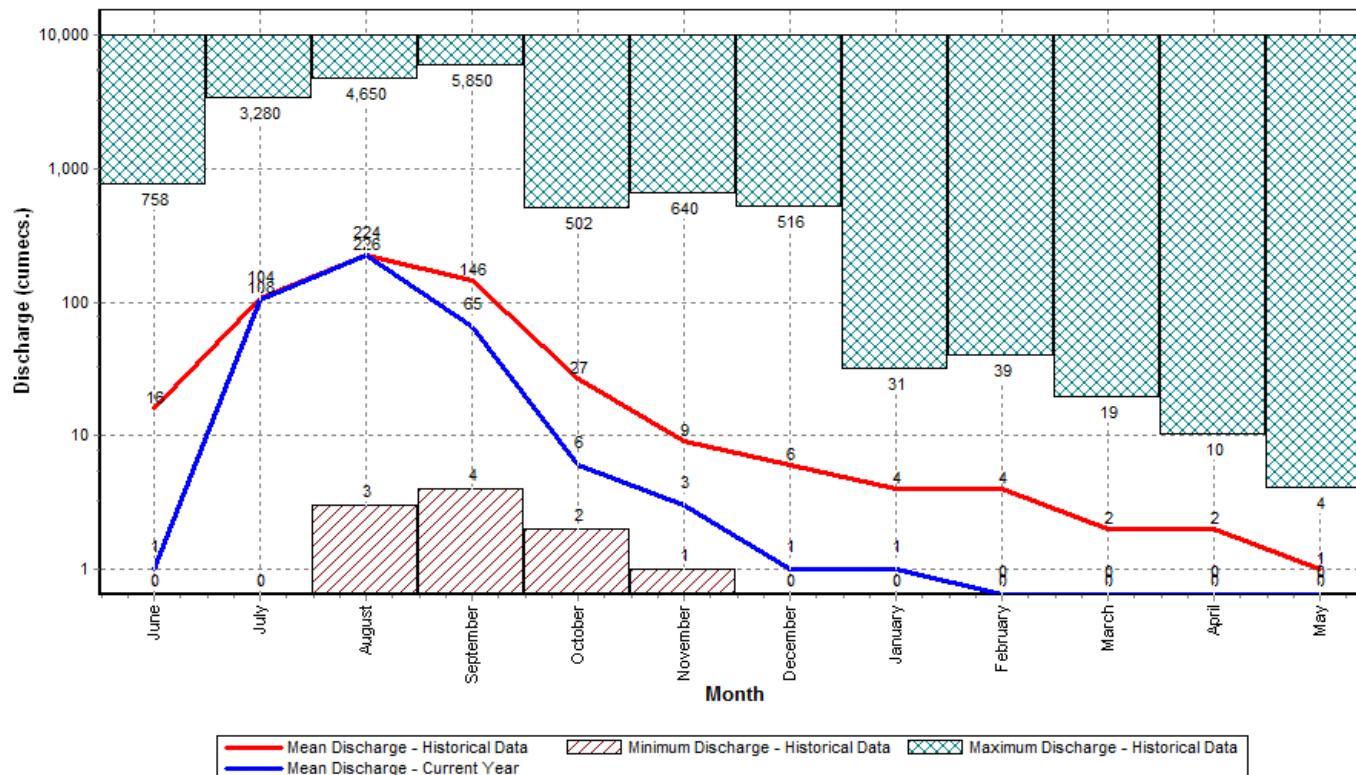

Histogram - Hydrograph for Water Year : 2015-16 (Data considered : 1977-2014)

Station Name : Shakkar at Gadarwara (010215012)

Division : Narmada Division, Bhopal

Local River : Shakkar

Sub-Division : MNSD I, CWC Hoshangabad

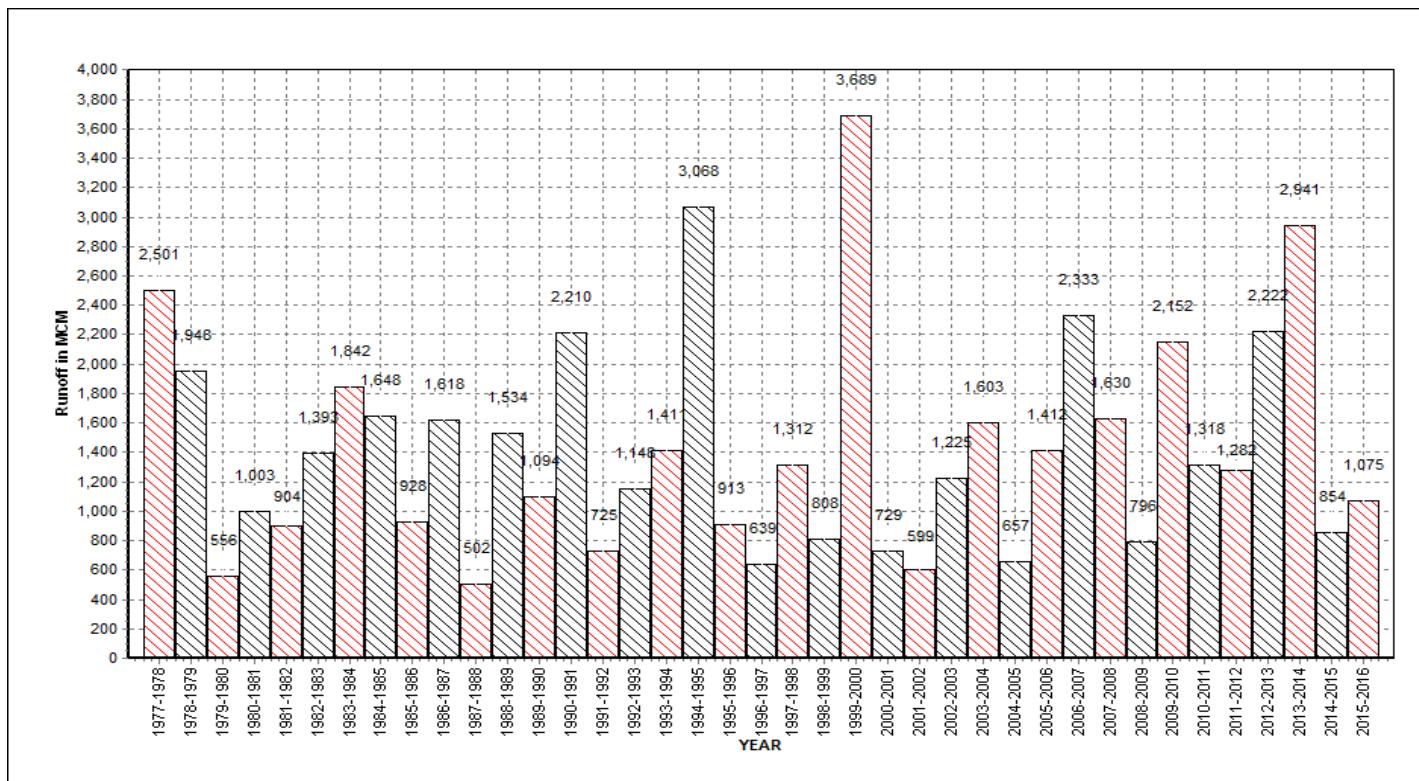

Annual Runoff Values for the period (1977 – 2016)

Station Name : Shakkar at Gadarwara (010215012)

Division : Narmada Division, Bhopal

Local River : Shakkar

Sub-Division : MNSD I, CWC Hoshangabad

Note: Missing values have not been considered while arriving at Annual Runoff

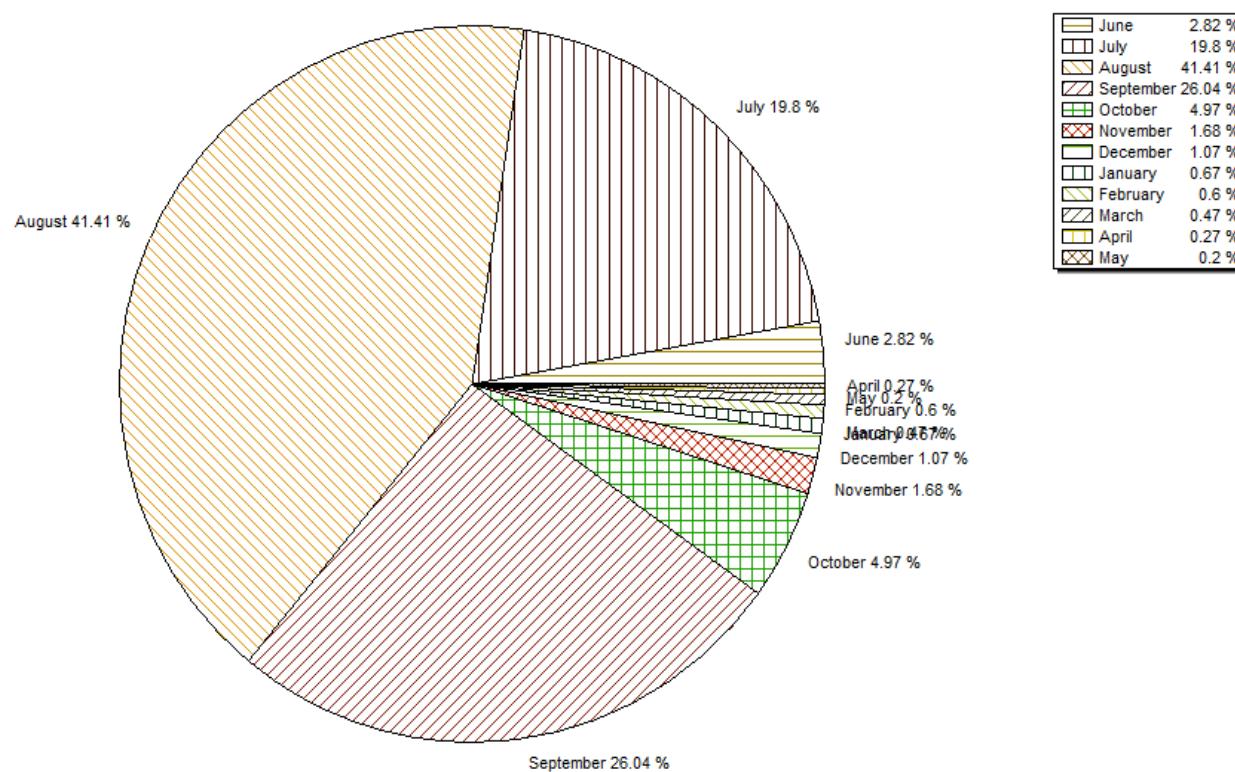

Monthly Average Runoff based on period (1977 – 2014)

Station Name : Shakkar at Gadarwara (010215012)

Division : Narmada Division, Bhopal

Local River : Shakkar

Sub-Division : MNSD I, CWC Hoshangabad

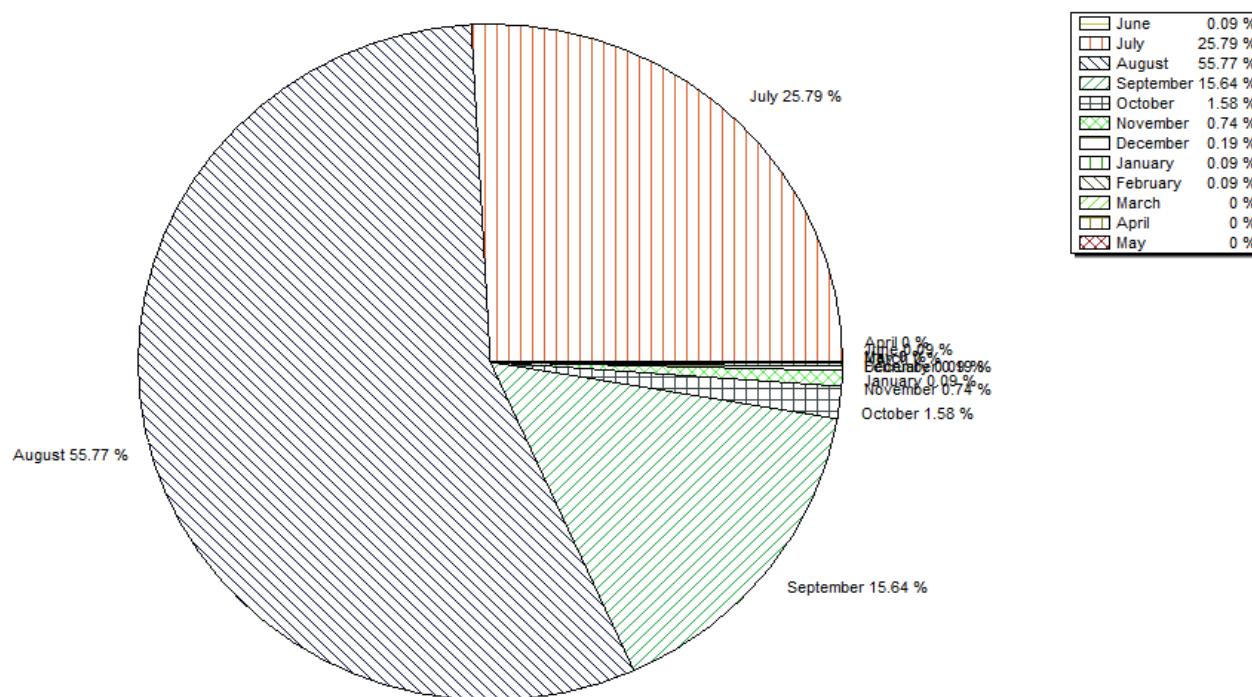

Monthly Runoff for the Year (2015-16)

Station Name : Shakkar at Gadarwara (010215012)

Division : Narmada Division, Bhopal

Local River : Shakkar

Sub-Division : MNSD I, CWC Hoshangabad

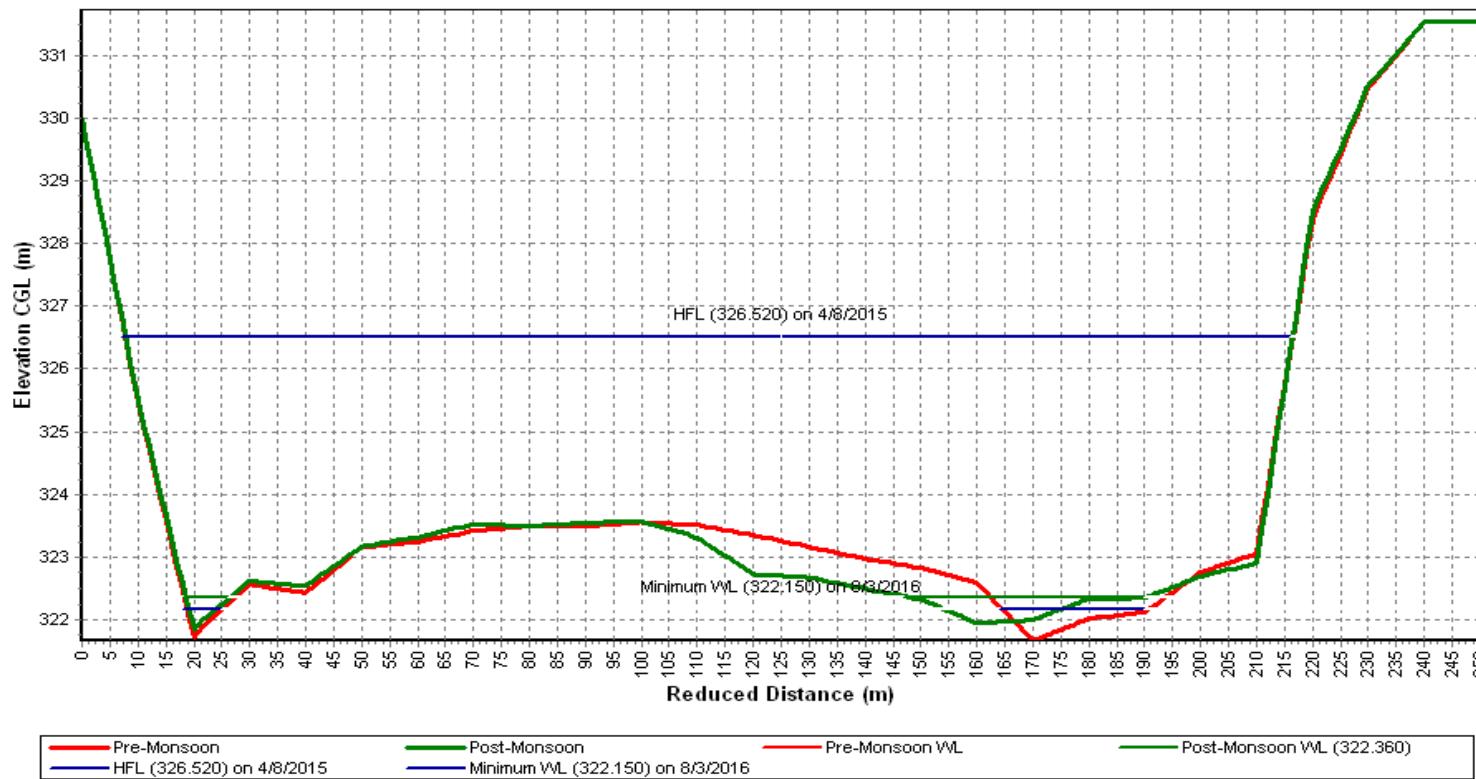

Pre-Monsoon & Post-Monsoon X-Section for Water Year (2015-16)

Station Name : Shakkar at Gadarwara (010215012)

Division : Narmada Division, Bhopal

Local River : Shakkar

Sub-Division : MNSD I, CWC Hoshangabad

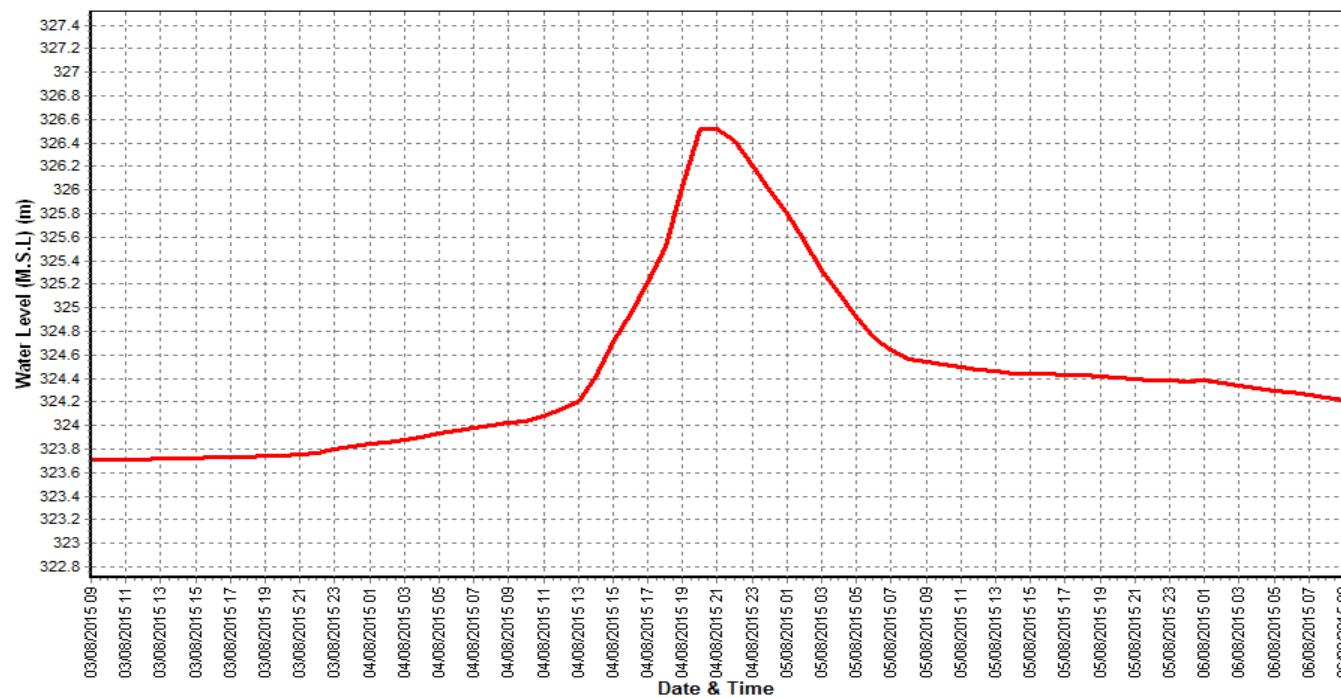

Water Level vs. Time - Graph of Highest Flood Peak during the Year (2015-16)

Station Name : Shakkar at Gadarwara (010215012)

Division : Narmada Division, Bhopal

Local River : Shakkar

Sub-Division : MNSD I, CWC Hoshangabad

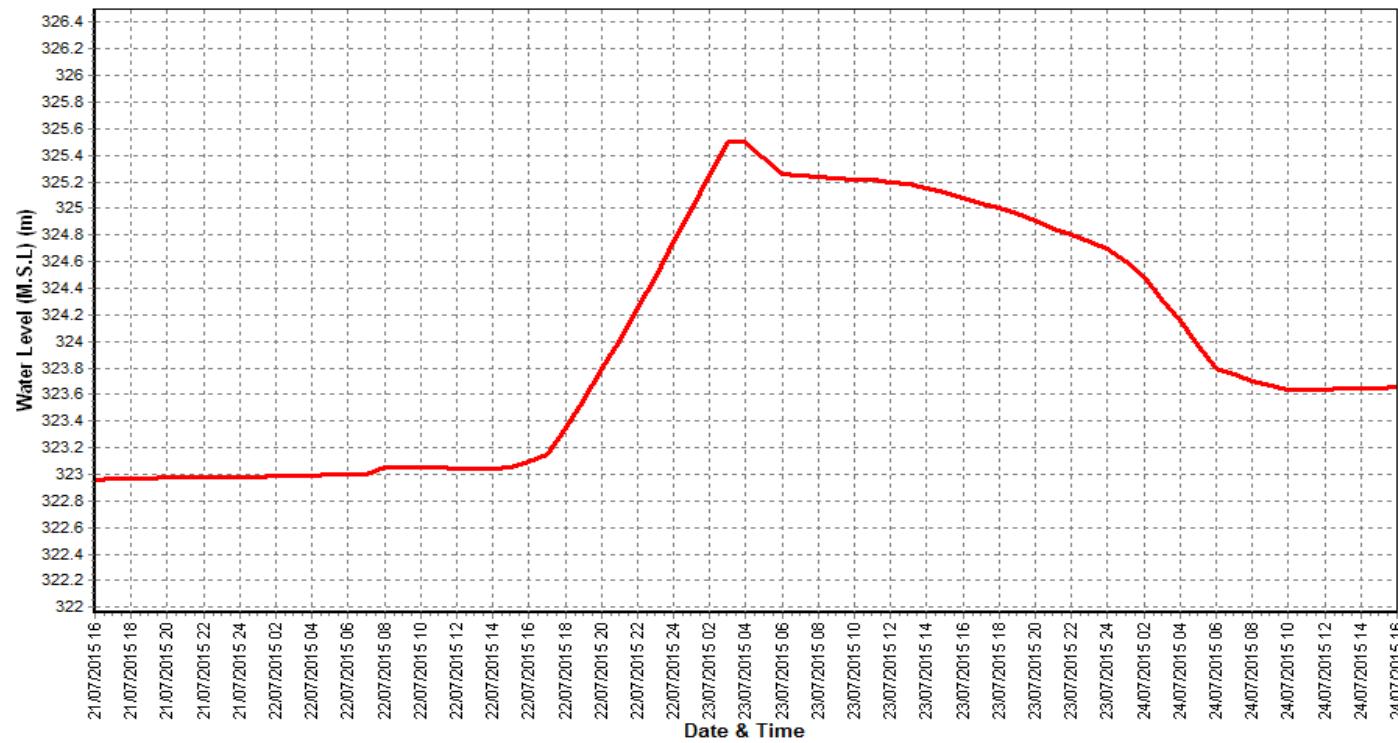

Water Level vs. Time - Graph of 2nd Highest Flood Peak during the Year (2015-16)

Station Name : Shakkar at Gadarwara (010215012)

Division : Narmada Division, Bhopal

Local River : Shakkar

Sub-Division : MNSD I, CWC Hoshangabad

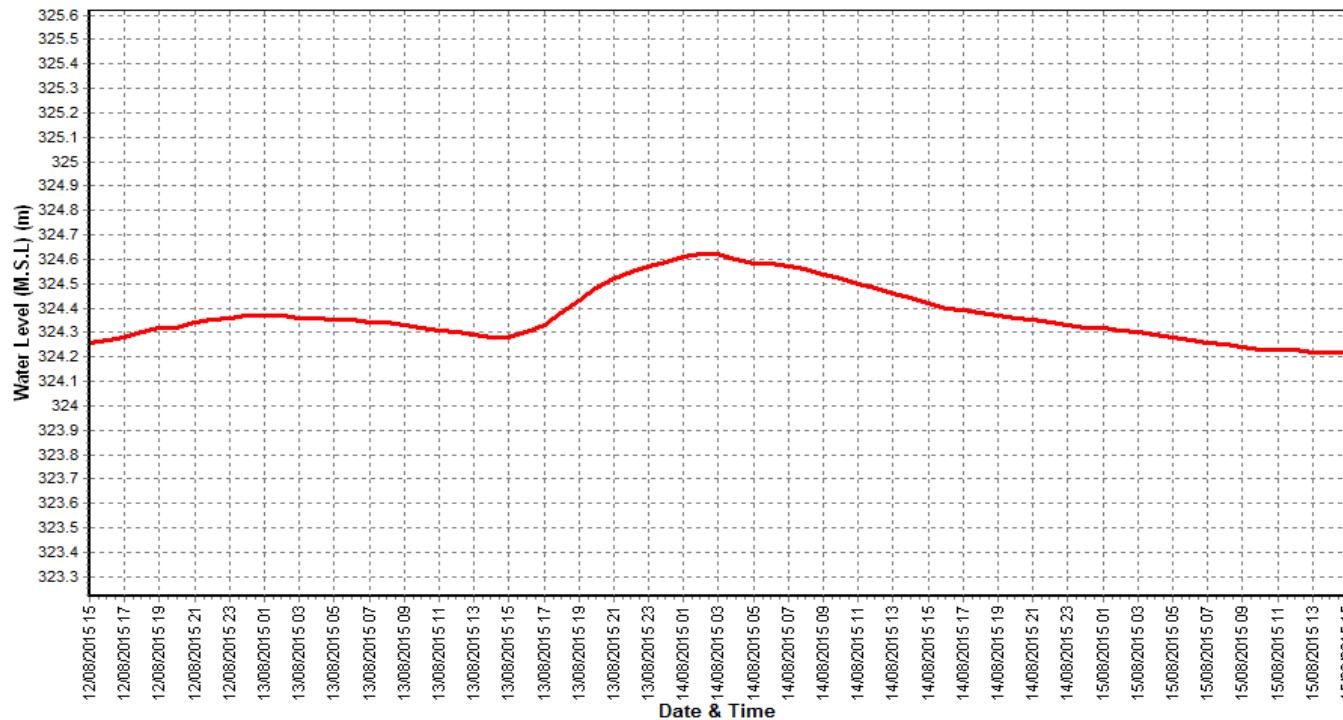

Water Level vs. Time - Graph of 3rd Highest Flood Peak during the Year (2015-16)

Station Name : Shakkar at Gadarwara (010215012)

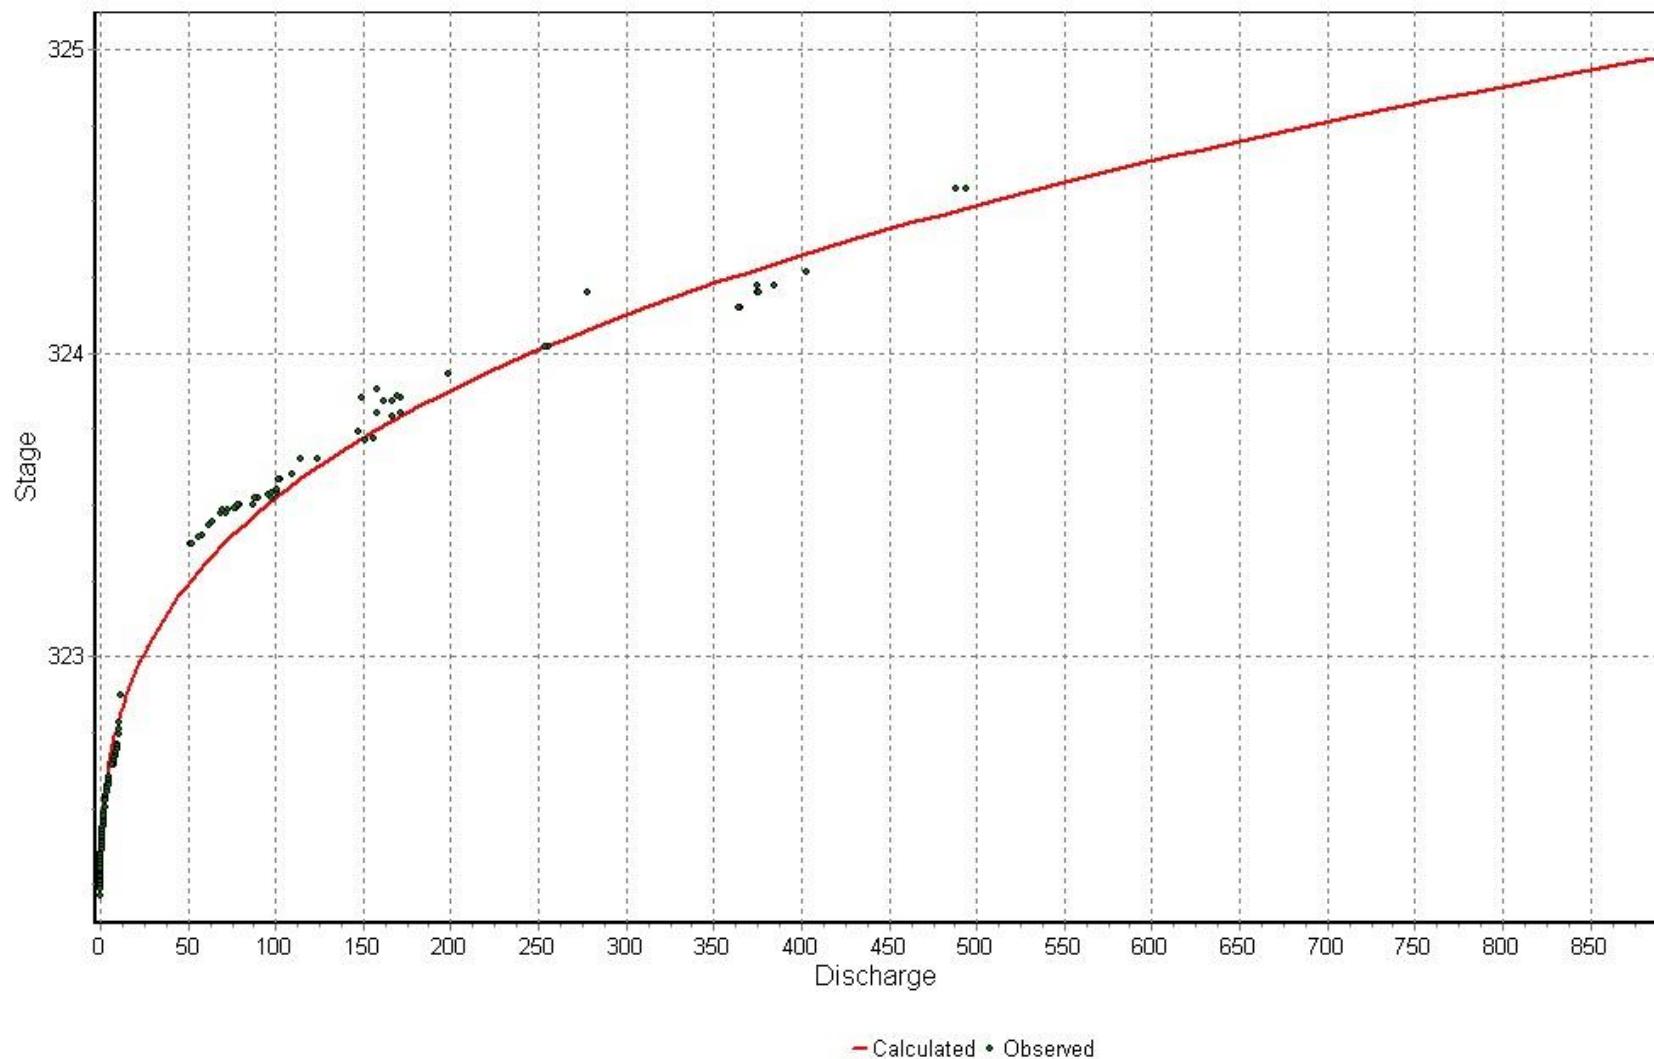

Division : Narmada Division, Bhopal

Local River : Shakkar

Sub-Division : MNSD I, CWC Hoshangabad

STAGE DISCHARGE CURVE OF SITE GADARWARA 15-16

Peak Computed Discharge = 140.3 cumecs on 16/08/2015 Corres. Water Level :344.39 m

Lowest Computed Discharge = 0.487 cumecs on 12/04/2016 Corres. Water Level :341.51 m

Q: Observed/Computed Discharge in cumecs **WL:**Corresponding Mean Water Level(M.S.L) in m *****:Computed Discharge
#:Discarded Discharge (values changed as per rating curve)

Note:Missing values ignored while arriving at Annual Runoff

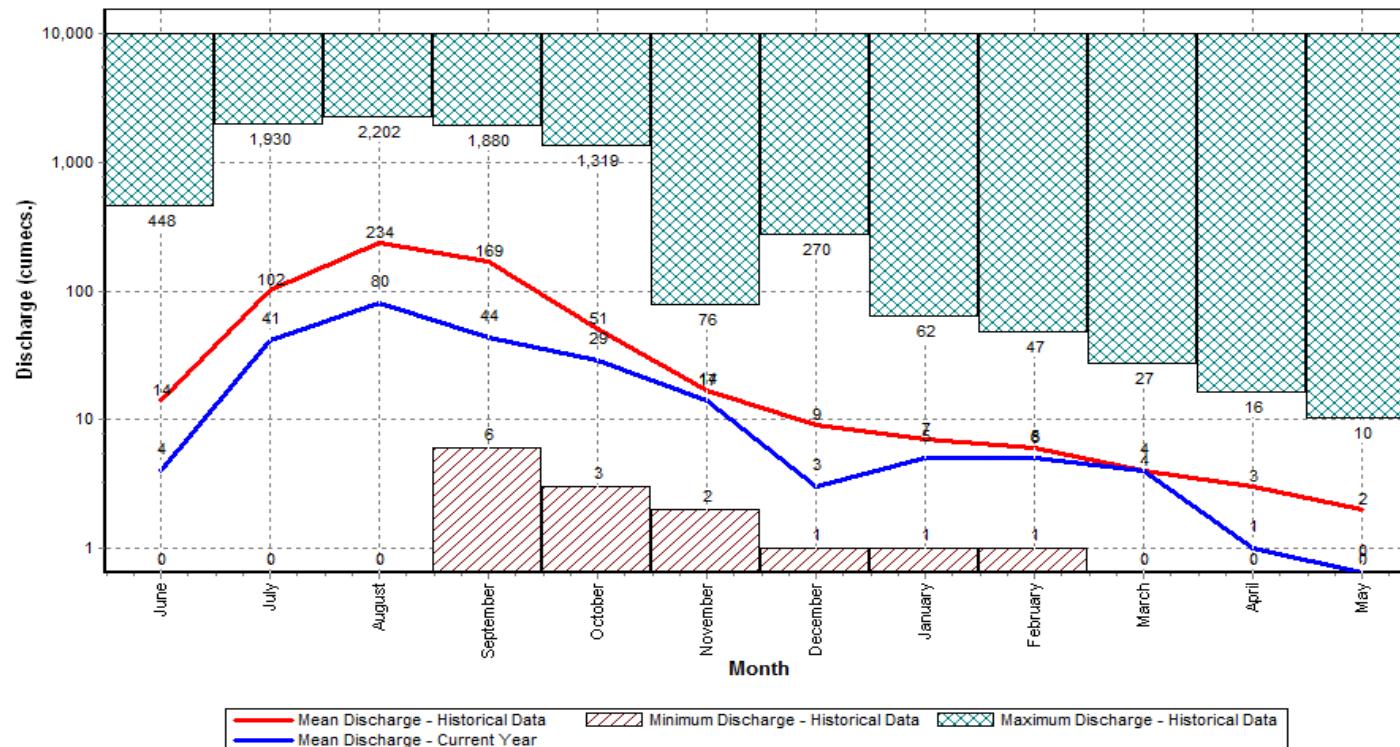

Histogram- Hydrograph for Water Year : 2015-16 (Data considered : 1979-2016)

Station Name : Hiran at Patan (010215009)

Division : Narmada Division, Bhopal

Local River : Hiran

Sub-Division : UNSD, CWC Jabalpur

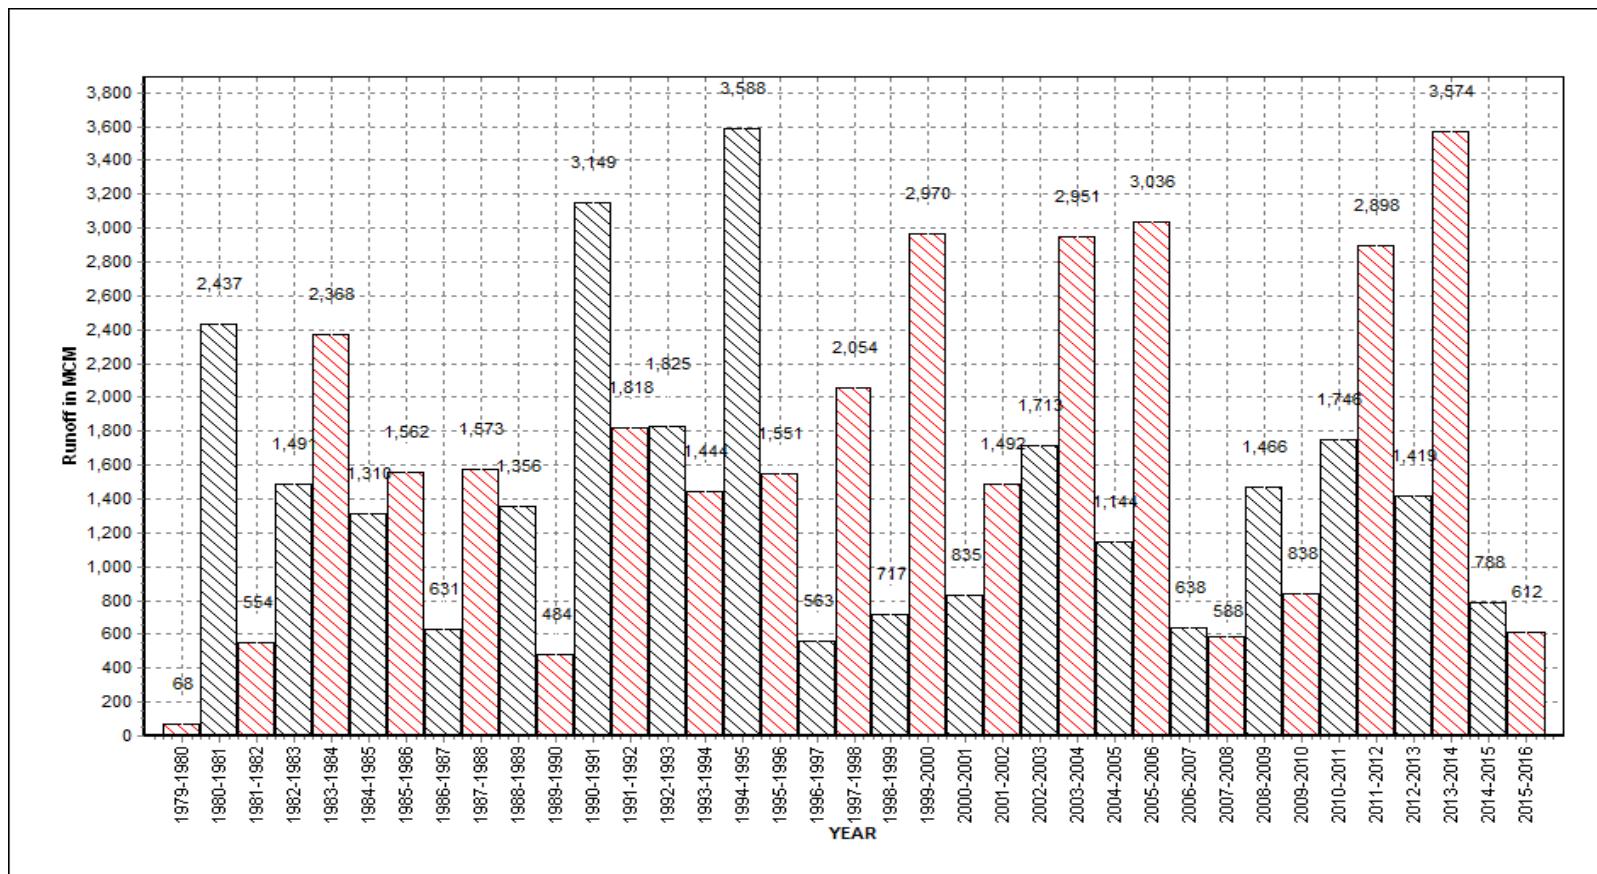

Annual Runoff Values for the period (1979 – 2016)

Station Name : Hiran at Patan (010215009)

Division : Narmada Division, Bhopal

Local River : Hiran

Sub-Division : UNSD, CWC Jabalpur

Note: Missing values have not been considered while arriving at Annual Runoff

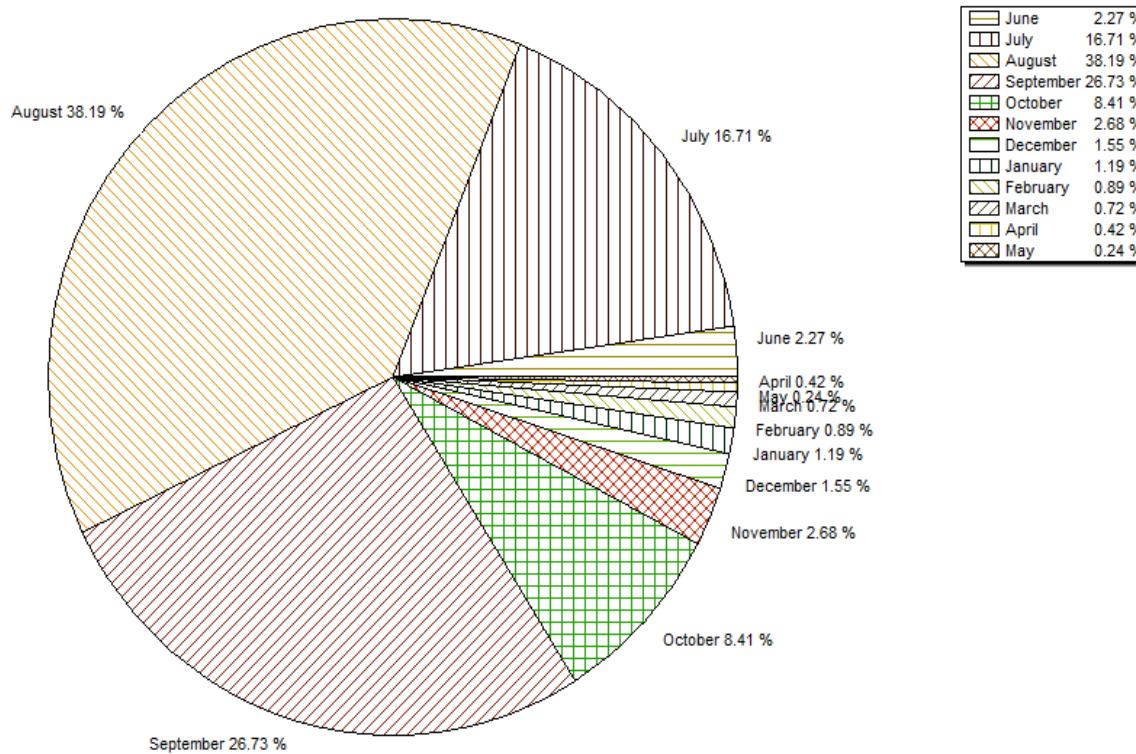

Monthly Average Runoff based on period (1979 – 2015)

Station Name : Hiran at Patan (010215009)

Division : Narmada Division, Bhopal

Local River : Hiran

Sub-Division : UNSD, CWC Jabalpur

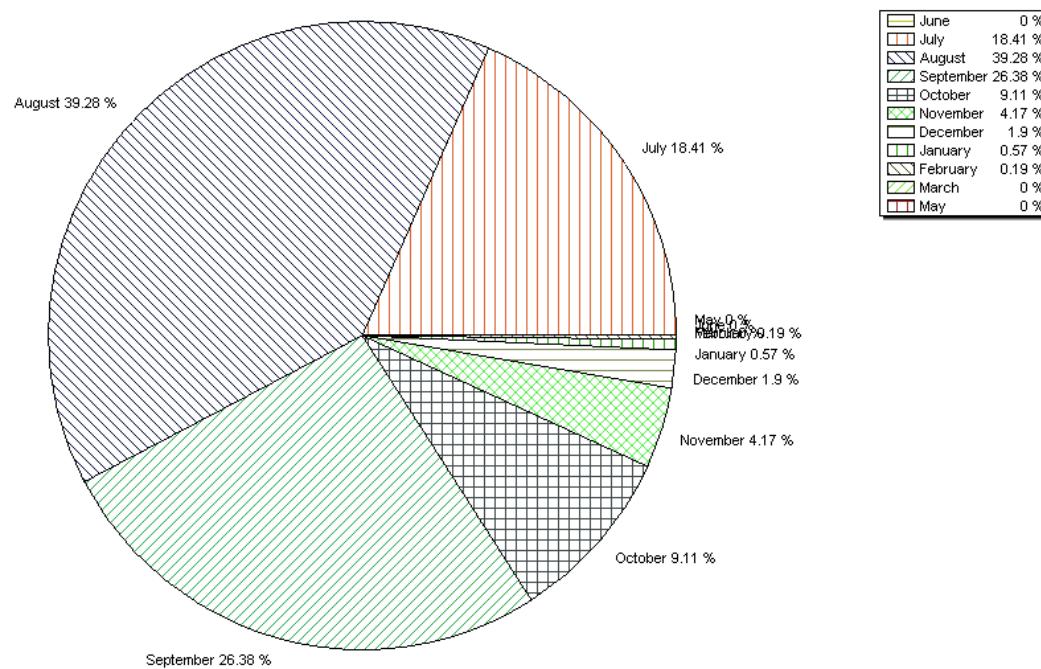

Monthly Runoff for the Year (2015-16)

Station Name : Hiran at Patan (010215009)

Local River : Hiran

Division : Narmada Division, Bhopal

Sub-Division : UNSD, CWC Jabalpur

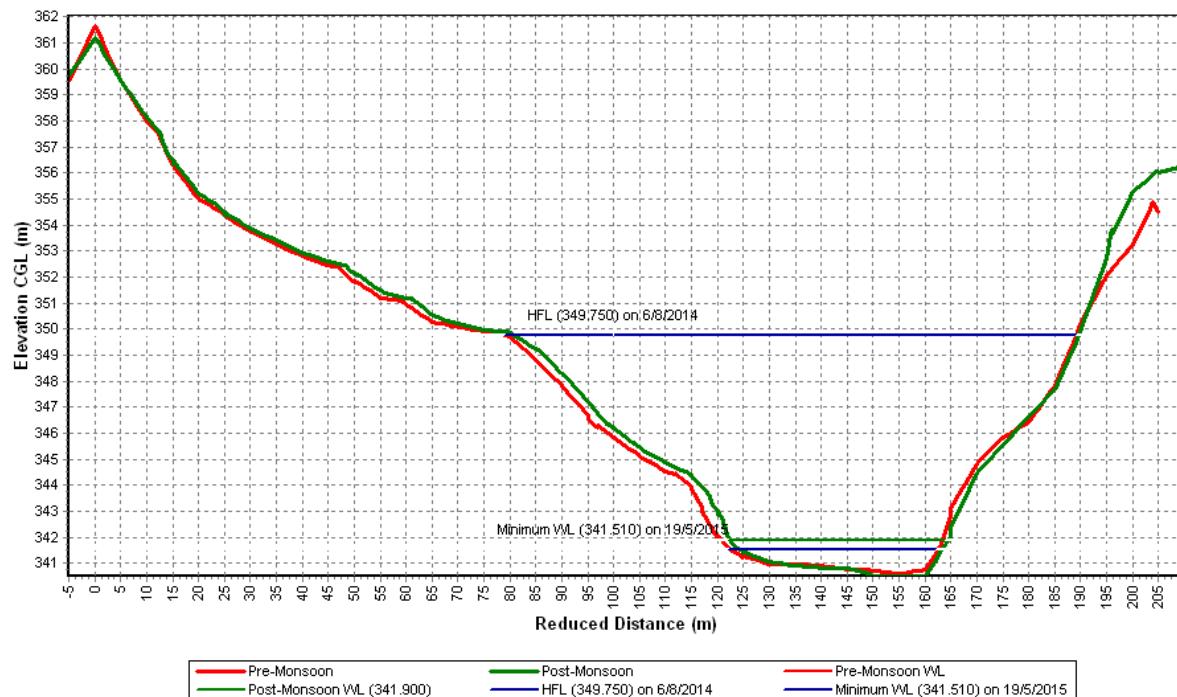

Pre-Monsoon & Post-Monsoon X-Section for Water Year (2015-16)

Station Name : Hiran at Patan (010215009)

Division : Narmada Division, Bhopal

Local River : Hiran

Sub-Division : UNSD, CWC Jabalpur

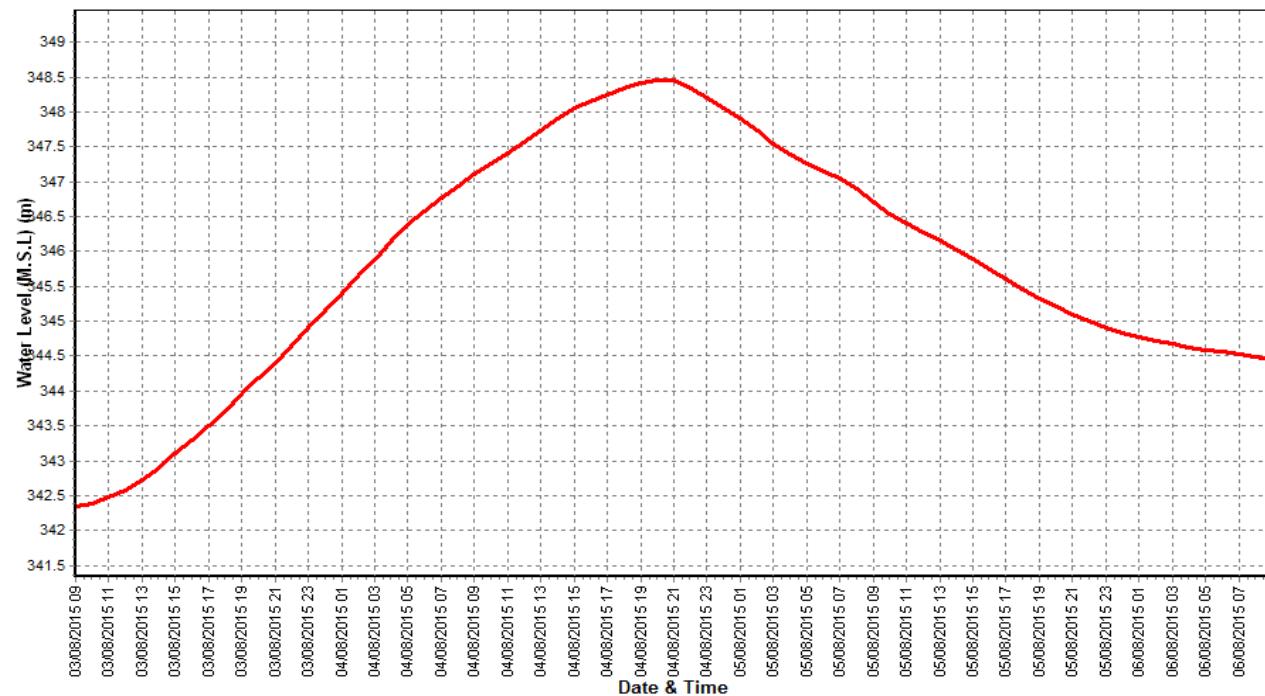

Water Level vs. Time - Graph of Highest Flood Peak during the Year (2015-16)

Station Name : Hiran at Patan (010215009)

Division : Narmada Division, Bhopal

Local River : Hiran

Sub-Division : UNSD, CWC Jabalpur

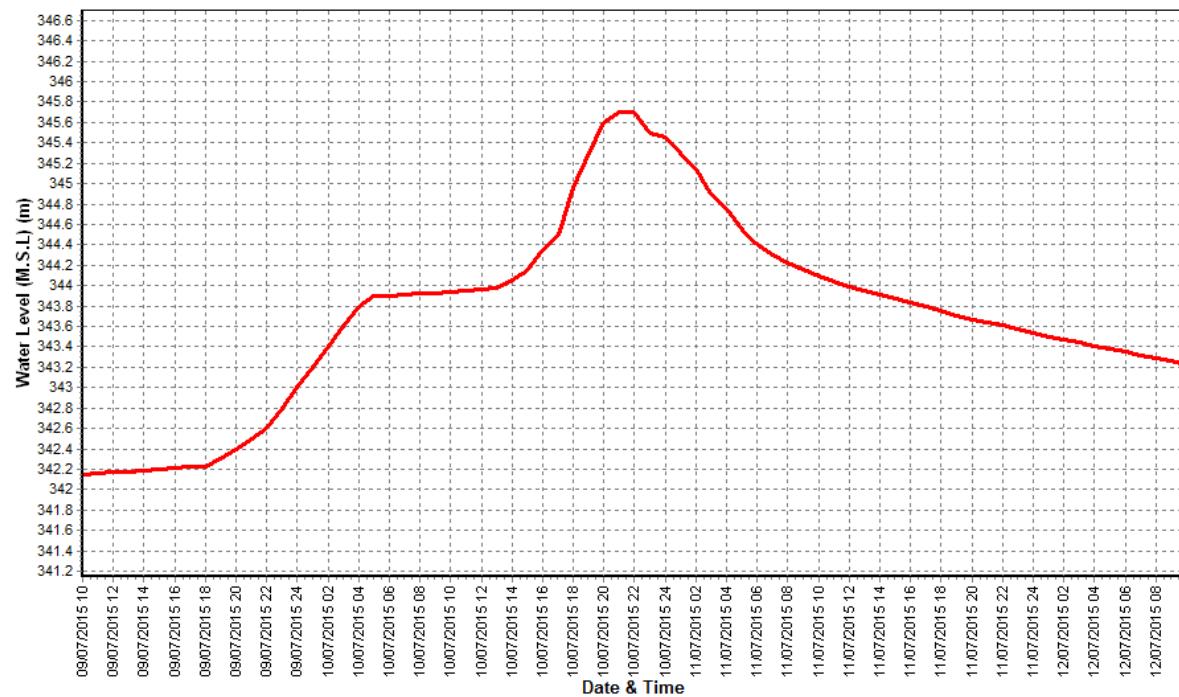

Water Level vs. Time - Graph of 2nd Highest Flood Peak during the Year (2015-16)

Station Name : Hiran at Patan (010215009)

Division : Narmada Division, Bhopal

Local River : Hiran

Sub-Division : UNSD, CWC Jabalpur

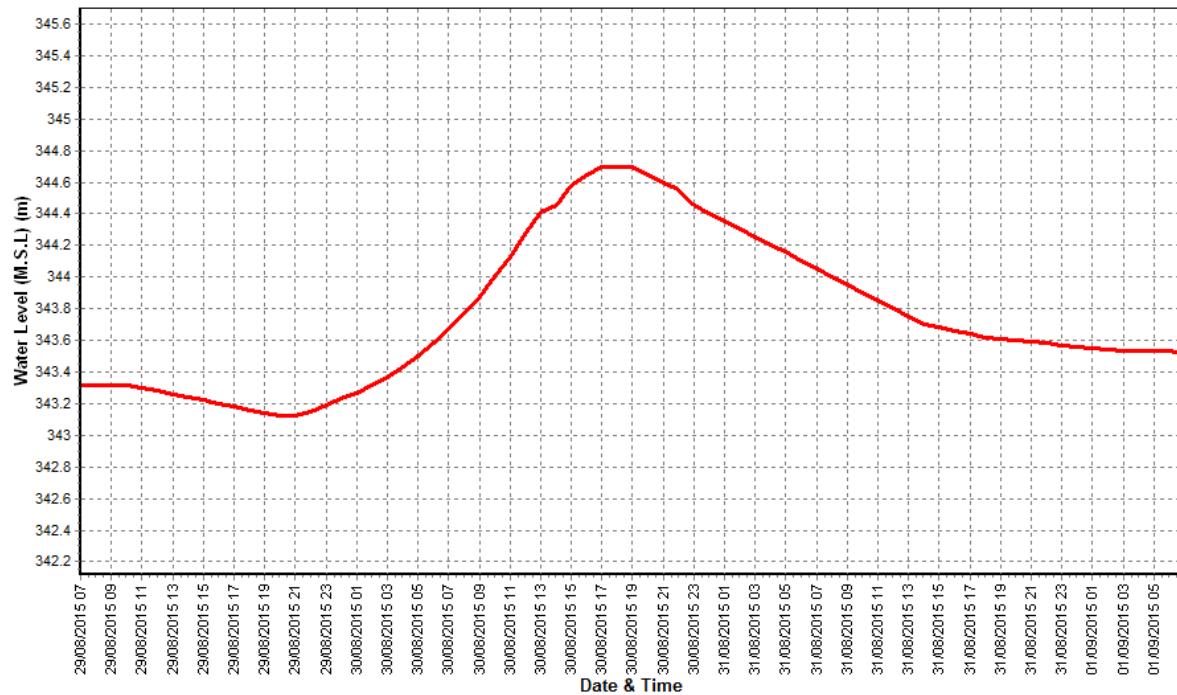

Water Level vs. Time - Graph of 3rd Highest Flood Peak during the Year (2015-16)

Station Name : Hiran at Patan (010215009)

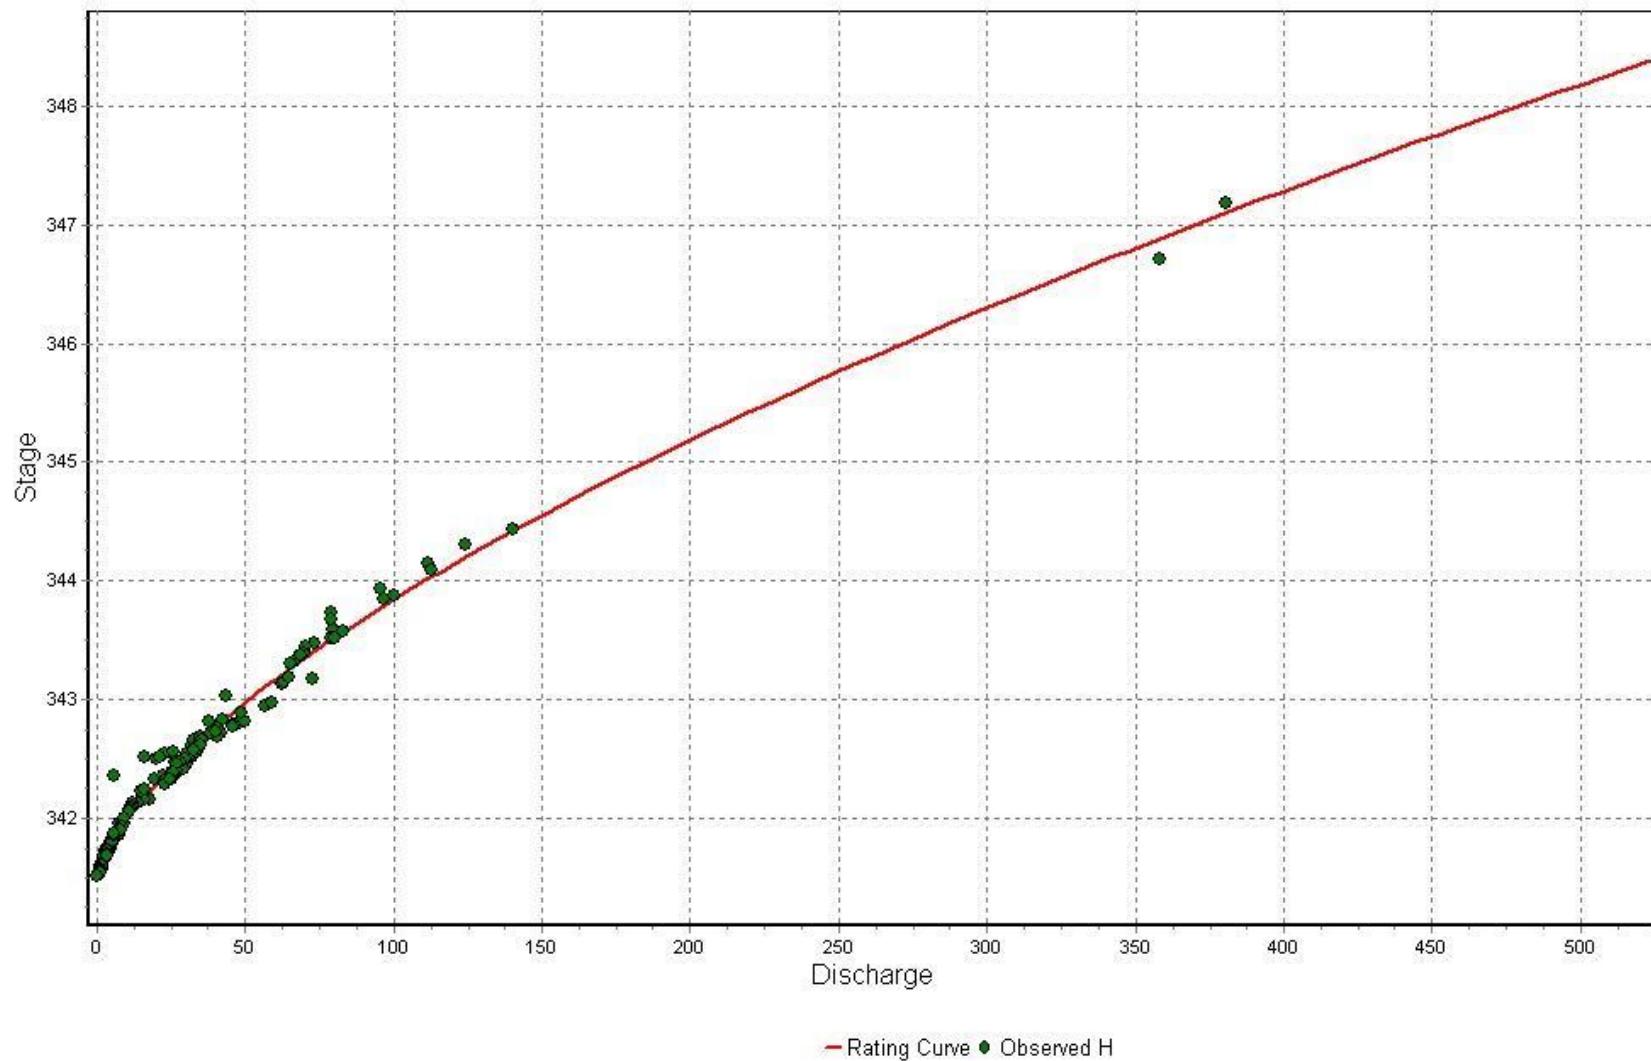

Division : Narmada Division, Bhopal

Local River : Hiran

Sub-Division : UNSD, CWC Jabalpur

Peak Computed Discharge = 269.5 cumecs on 12/07/2015

Corres. Water Level :451.64 m

Lowest Computed Discharge = 0.031 cumecs on 22/05/2016

Corres. Water Level :449.11 m

Q: Observed/Computed Discharge in cumecs WL:Corresponding Mean Water Level(M.S.L) in m *:Computed Discharge
#:Discarded Discharge (values changed as per rating curve)

Note:Missing values ignored while arriving at Annual Runoff

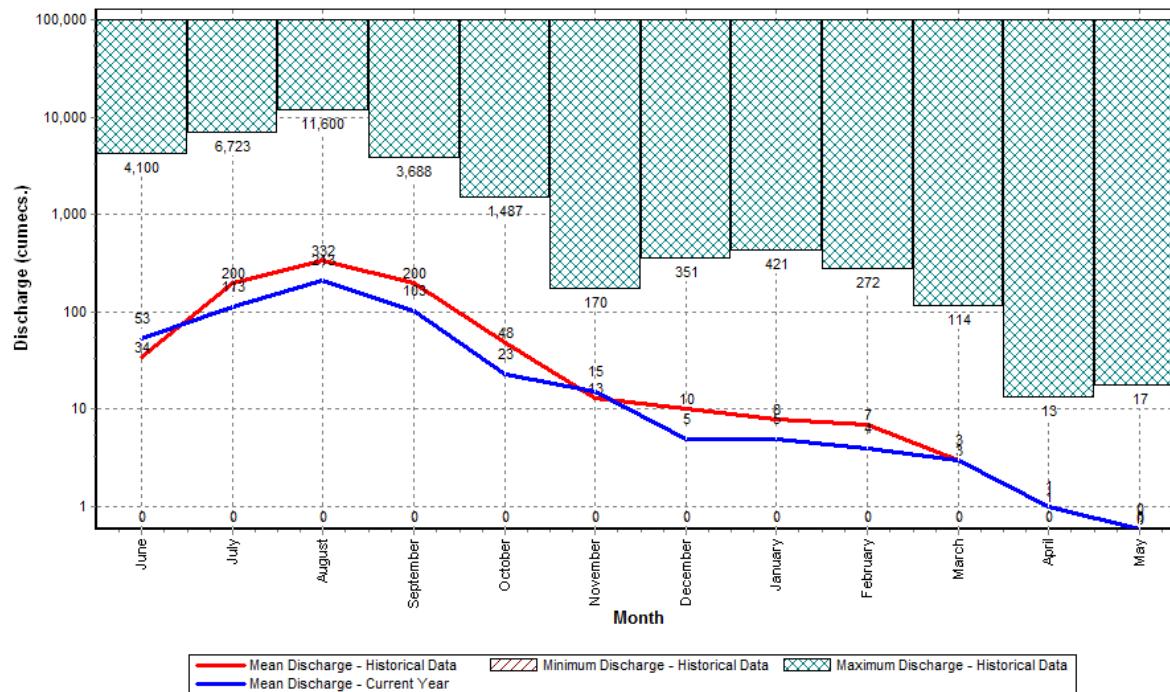

Histogram- Hydrograph for Water Year : 2015-16 (Data considered : 1977-2016)

Station Name : Burhner at Mohgaon (010215004)

Division : Narmada Division, Bhopal

Local River : Burhner

Sub-Division : UNSD, CWC Jabalpur

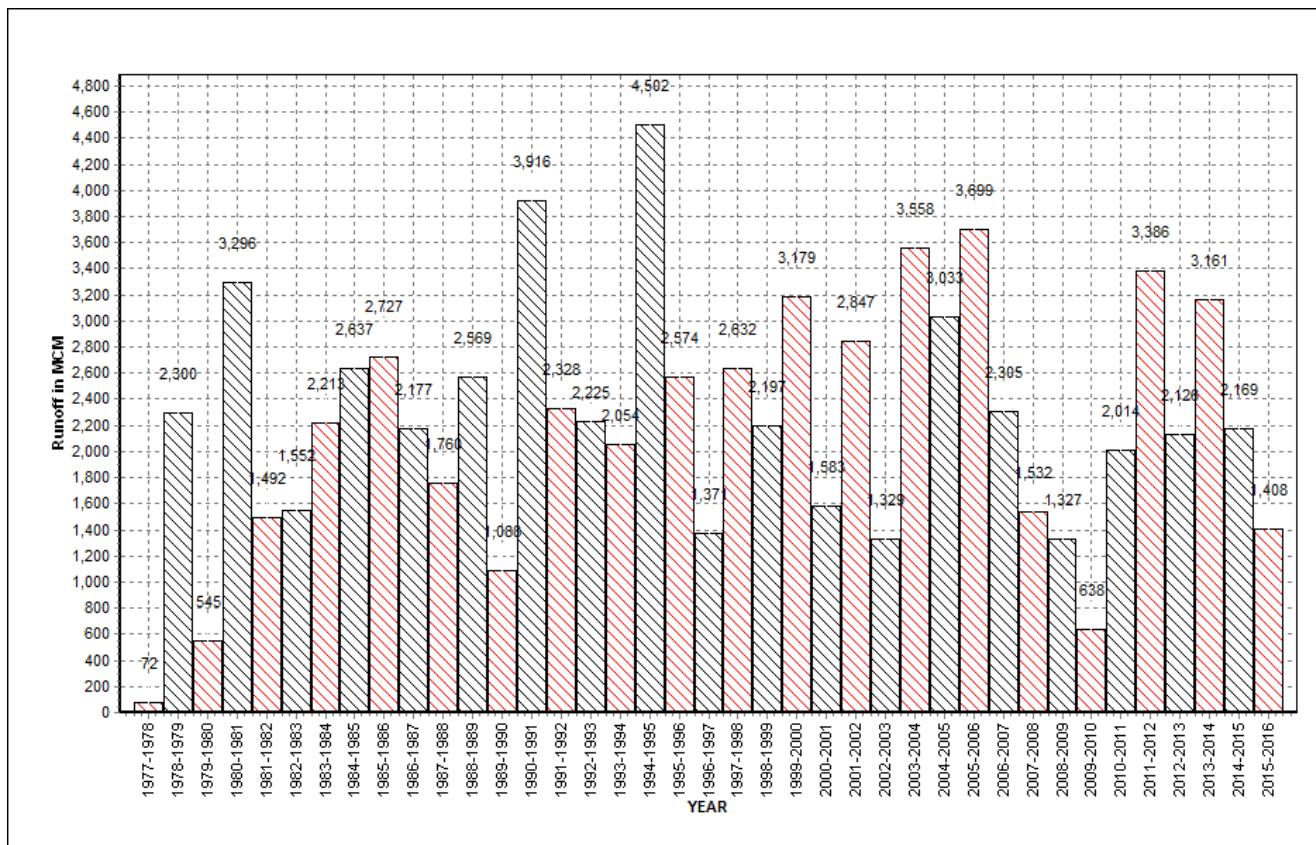

Annual Runoff Values for the period (1977– 2016)

Station Name : Burhner at Mohgaon (010215004)

Division : Narmada Division, Bhopal

Local River : Burhner

Sub-Division : UNSD, CWC Jabalpur

Note: Missing values have not been considered while arriving at Annual Runoff

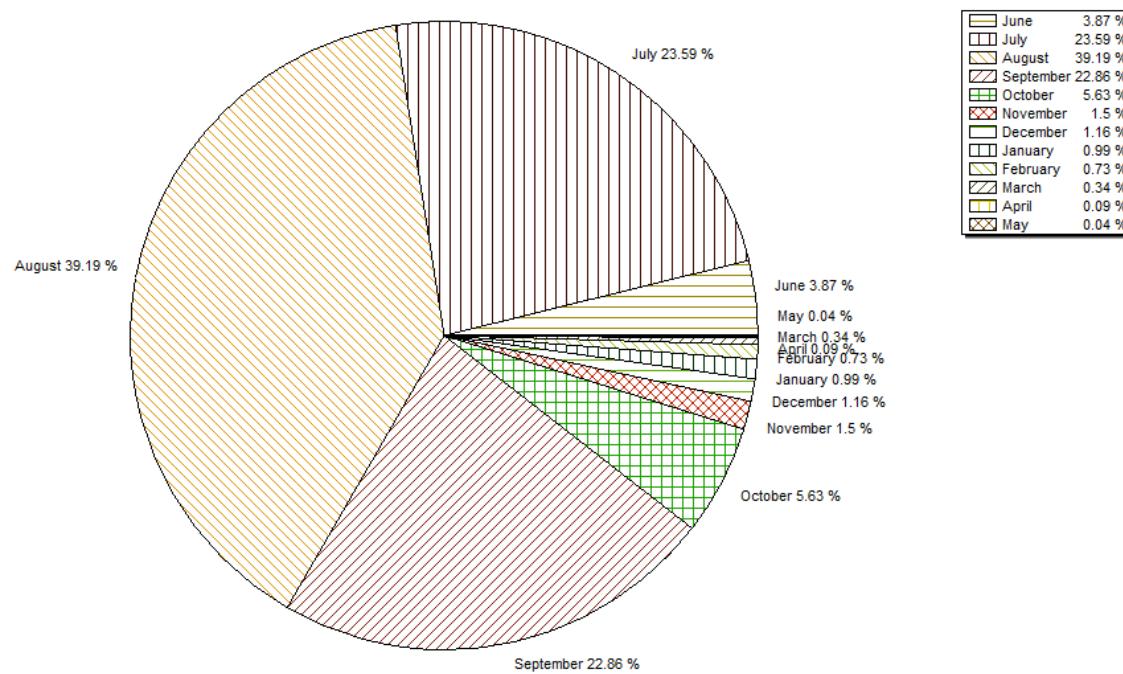

Monthly Average Runoff based on period (1977– 2014)

Station Name : Burhner at Mohgaon (010215004)

Division : Narmada Division, Bhopal

Local River : Burhner

Sub-Division : UNSD, CWC Jabalpur

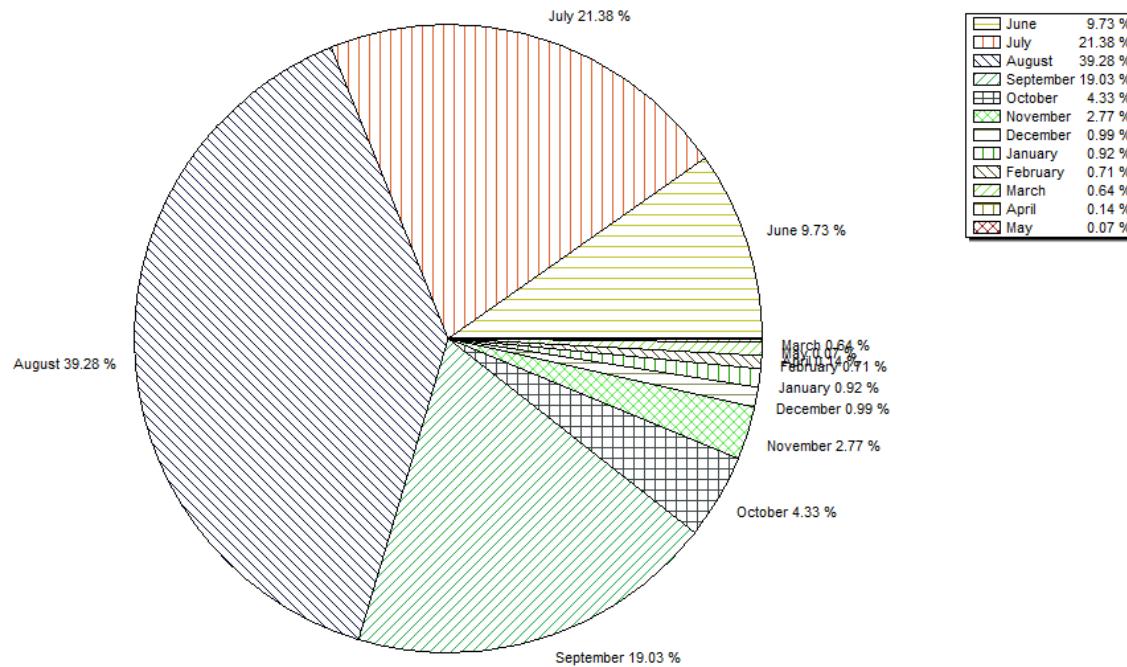

Monthly Runoff for the Year (2015-16)

Station Name : Burhner at Mohgaon (010215004)

Local River : Burhner

Division : Narmada Division, Bhopal

Sub-Division : UNSD, CWC Jabalpur

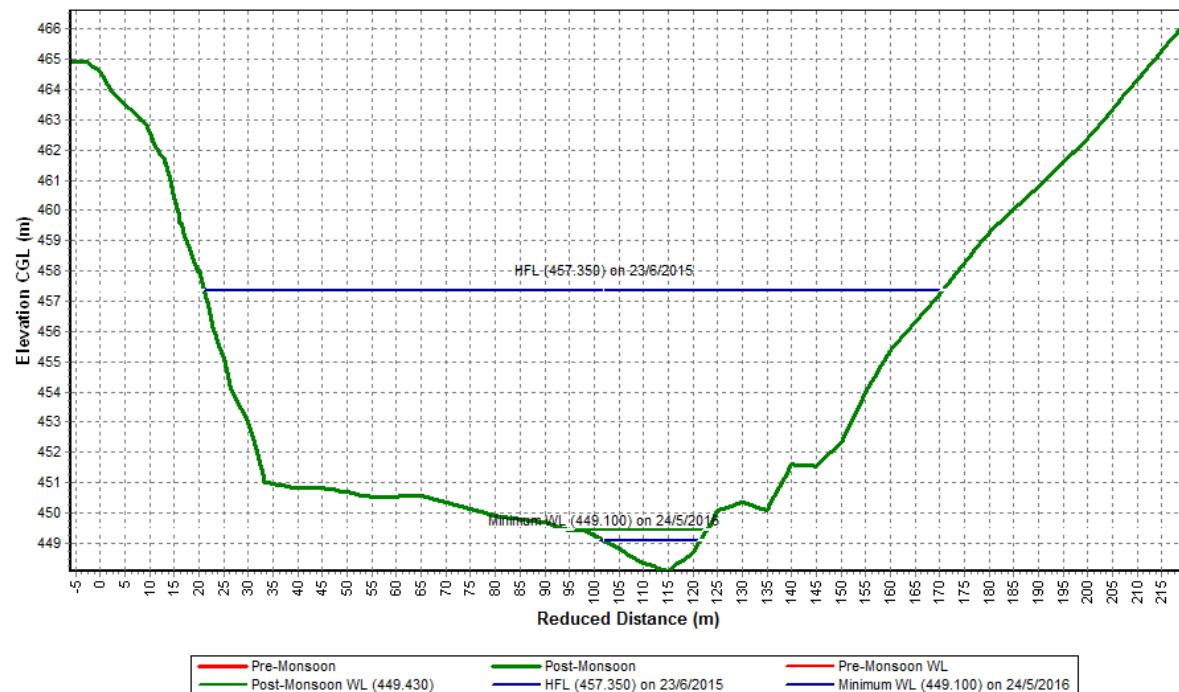

Pre-Monsoon & Post-Monsoon X-Section for Water Year (2015-16)

Station Name : Burhner at Mohgaon (010215004)

Division : Narmada Division, Bhopal

Local River : Burhner

Sub-Division : UNSD, CWC Jabalpur

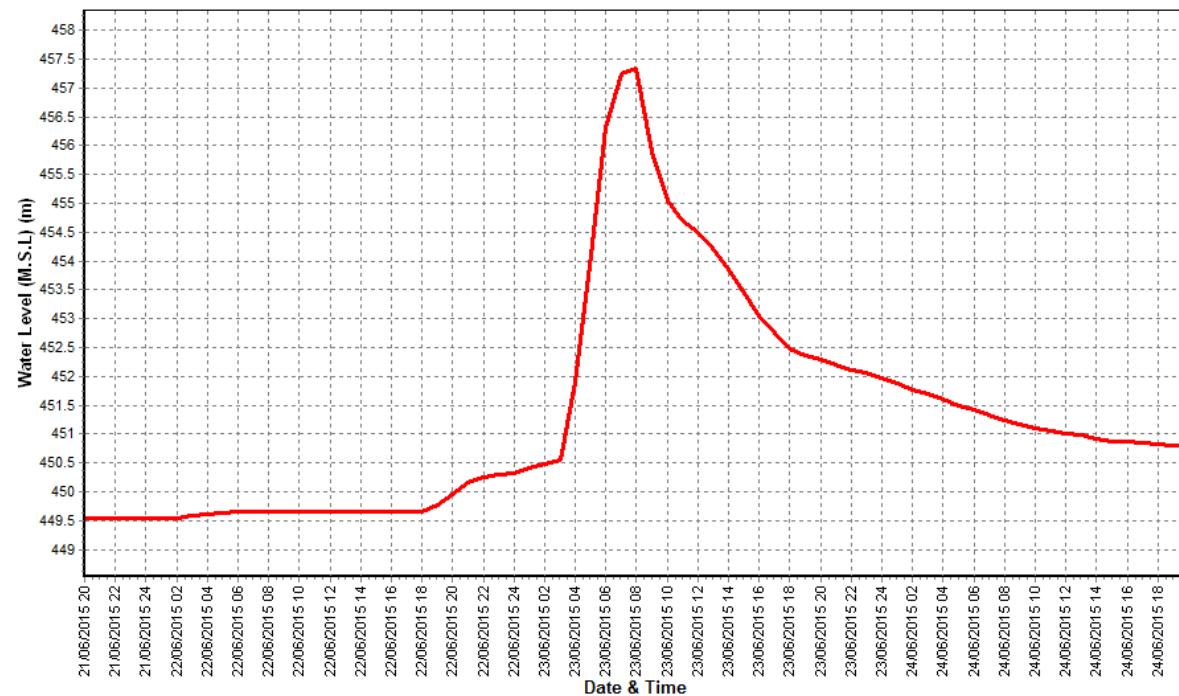

Water Level vs. Time - Graph of Highest Flood Peak during the Year (2015-16)

Station Name : Burhner at Mohgaon (010215004)

Division : Narmada Division, Bhopal

Local River : Burhner

Sub-Division : UNSD, CWC Jabalpur

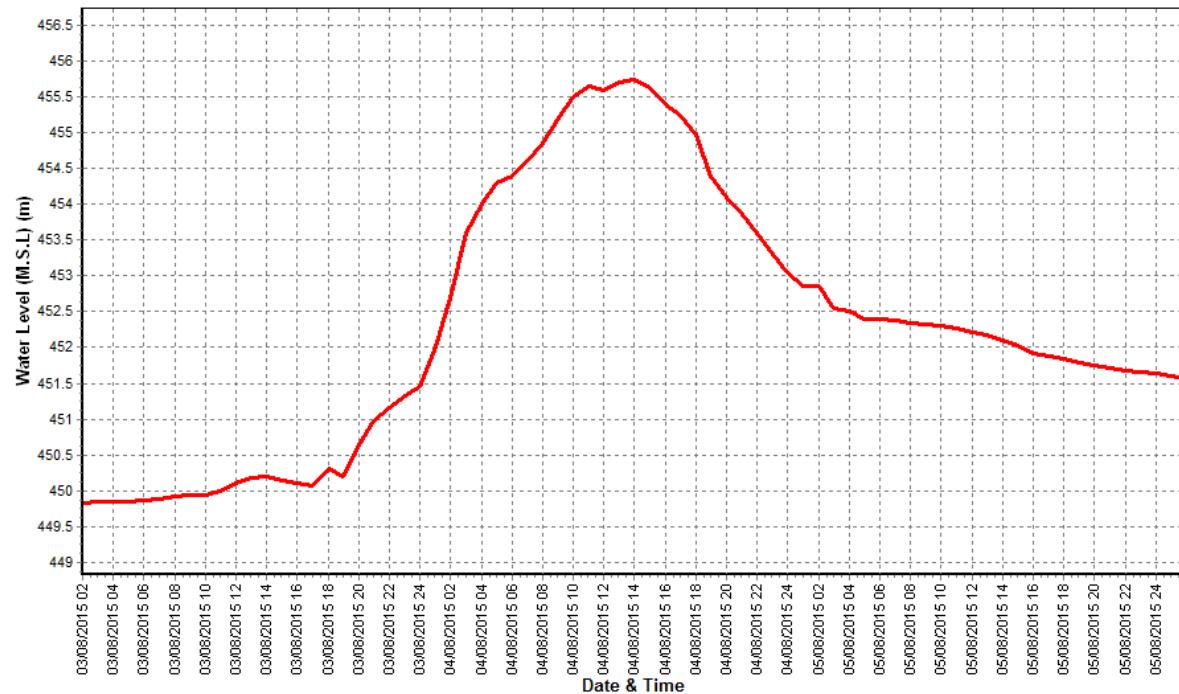

Water Level vs. Time - Graph of 2nd Highest Flood Peak during the Year (2015-16)

Station Name : Burhner at Mohgaon (010215004)

Division : Narmada Division, Bhopal

Local River : Burhner

Sub-Division : UNSD, CWC Jabalpur

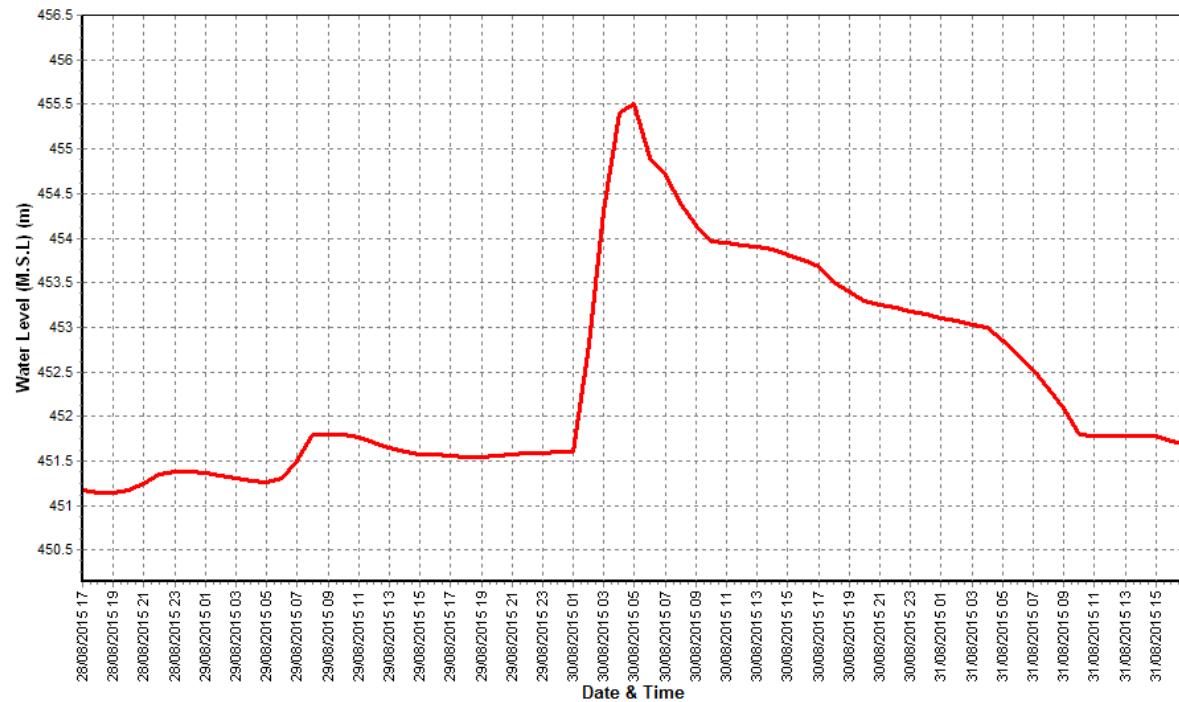

Water Level vs. Time - Graph of 3rd Highest Flood Peak during the Year (2015-16)

Station Name : Burhner at Mohgaon (010215004)

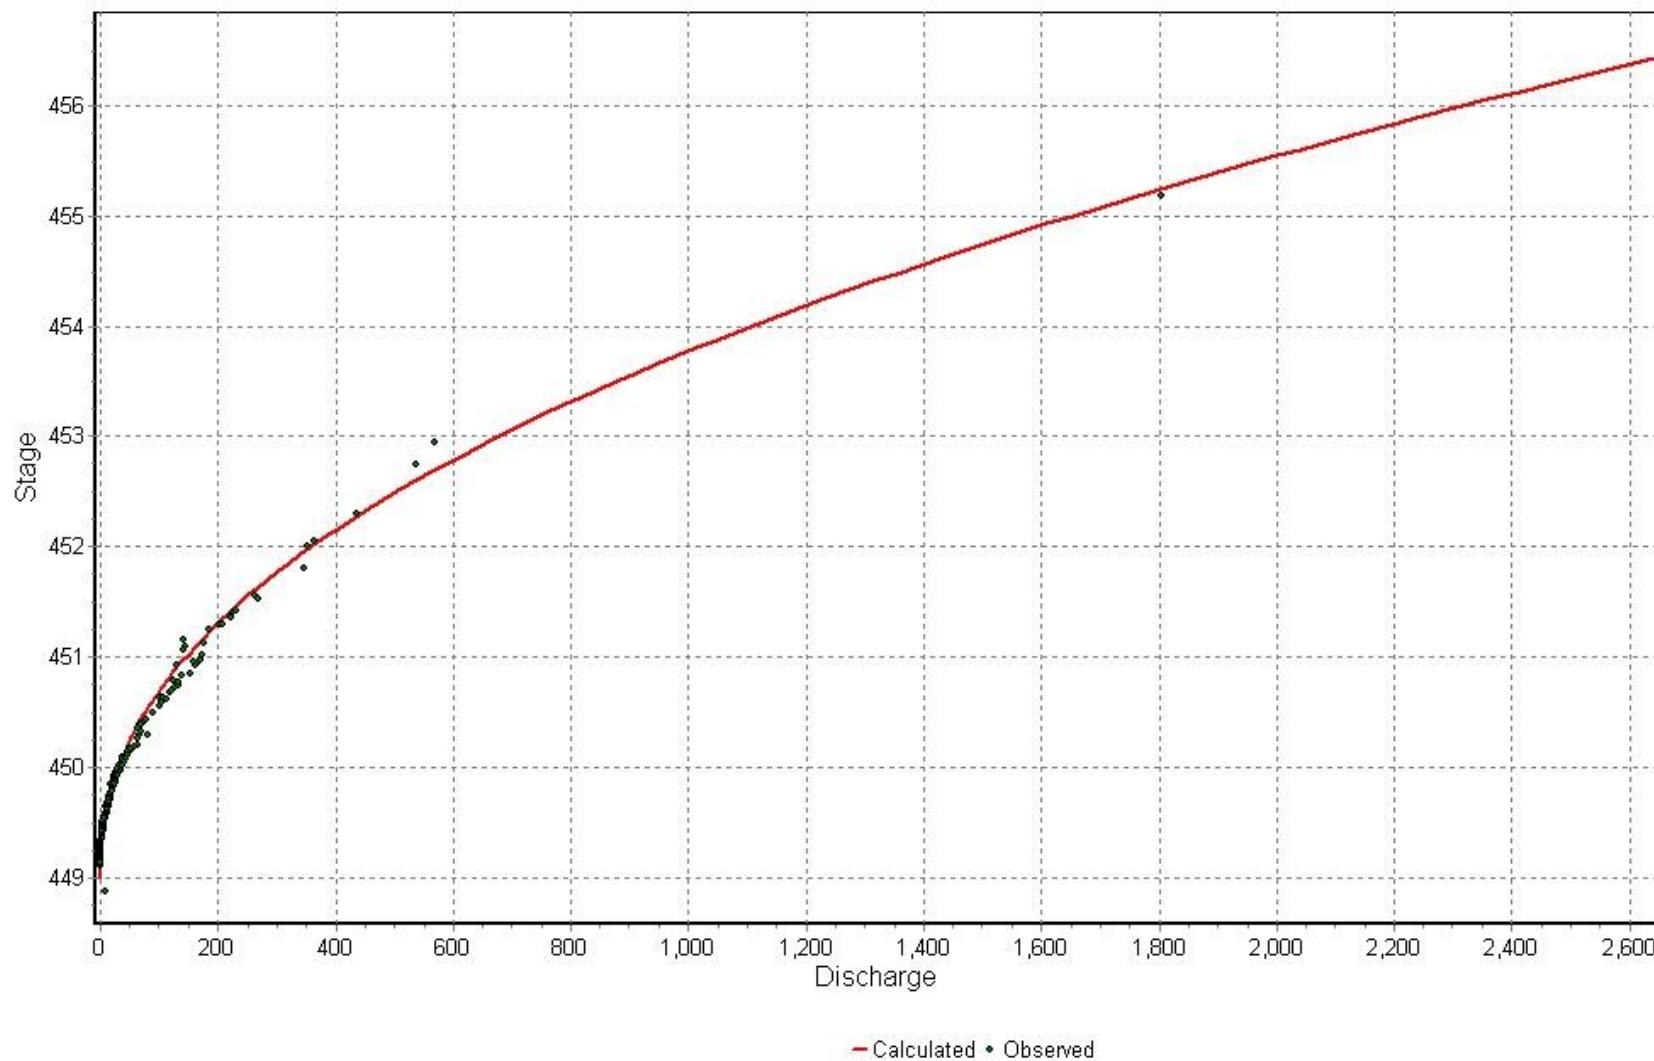

Division : Narmada Division, Bhopal

Local River : Burhner

Sub-Division : UNSD, CWC Jabalpur
